ACKNOWLEDGEMENTS

THE FIRST edition of this book, by the undersigned, appeared in 1923. It carried the subtitle "Bibliographies and Periodicals" and constituted No. 10 of the *American Geographical Society Research Series*. The present edition has been completely revised not only with a view to bringing the first edition up to date but to include, in addition, atlases and certain other geographical reference books. A wholly new Introduction has also been provided. Nearly all of the references to bibliographies and periodicals that had appeared prior to 1942 and were not already listed in the first edition were accumulated by Elizabeth T. Platt. At the time of her tragic death in May, 1943, we were planning to work together on the volume with the thought that she would do the greater part of the work. Had such collaboration been possible this would have been a better book.

Grateful acknowledgement is made of the assistance which the following persons rendered in preparing the manuscript for the press: Mrs. Luella Dambaugh, formerly of the staff of the Society; Miss Alice Taylor, Mrs. Wilma B. Fairchild, Miss Marion Lack, the late Miss Elsa Rowell, and others of the staff of the American Geographical Society; Mr. Saul Benison, graduate student in the Department of History, Columbia University, and Miss Alice E. Pratt of the Columbia University Press. The help of 210 American geographers in preparing the Appendix is acknowledged on page 278, below.

INTRODUCTION

INTRODUCTION

THIS BOOK is intended to be of help to anyone who has occasion to make a serious study of geography. It is designed more particularly to serve advanced students and professional workers in that field in carrying on research in libraries and in preparing manuscripts for publication. In the Introduction some observations on the nature of geographical studies are followed by a general discussion of published aids to geographical research. The main part of the volume consists of selective lists of bibliographies, periodicals, atlases, and other reference works. The purpose is not to furnish the student with references to the primary works on which to base his investigations, for no single book could do this adequately for the whole immense subject of geography. The reader will look in vain for the titles of publications on, say, the geography of plants, or of cities, or of Massachusetts. He will, however, find information guiding him to other works, geographical or otherwise, which should, in turn, open up the literature and the maps pertaining to almost any aspect of geography that he may wish to study.

THE NATURE OF GEOGRAPHICAL STUDIES

MOTIVES FOR GEOGRAPHICAL INVESTIGATION

To survive on this planet, the higher animals acquire geographical knowledge of a rudimentary kind. They must know something of the distribution of things on the lands and in the seas that form their habitats—where to go to find food or shelter or comfort, or to escape from dangers. If instinct rather than intelligence or volition controls their movements, instinct itself springs from a mysterious kind of knowledge: the migratory birds know where to fly over thousands of miles of continent and ocean, though their ways of knowing differ materially from the geographer's. The most primitive of peoples also are familiar with the distribution of resources and obstacles in ter-

rains where they fish, hunt, and fight, and many travelers have told of the remarkably accurate and detailed maps that wandering tribesmen often carry in their minds' eyes and can scratch on turf, or sand, or snow. Among more advanced folk such knowledge is widened, deepened, systematized, and, since there are few enterprises necessary to modern human existence or progress in which geographical circumstances do not have to be reckoned with, innumerable persons are today engaged either directly or indirectly in the gathering, interpreting, and disseminating of geographical information.

We may distinguish three motives for the advancement of geographical knowledge: personal, group, and disinterested. Personal motives impel the individual to carry on geographical investigation for his own benefit or satisfaction; group motives impel him to do so in the interests of groups of people; and disinterested motives impel him to do so in the interests of humanity.

Personal motives.—Many individuals today embark upon geographical studies because their jobs so require. Some, however, go into or continue in geographical work because there is something about it that allures them. These are geographers by nature, gifted in geography as others are gifted in music, painting, or mathematics. But while an inner fire may give zest to studies in the field or library, the satisfaction of social needs rather than of personal desires is the main incentive to geographical investigation.

Group motives.—Man conducts most enterprises necessary for his survival and improvement on a coöperative basis. The organized groups by which geographical research is conducted fall into two categories: (1) professional or amateur groups united by an interest in geography as such; and (2) groups united by other interests, for the promotion of which geographical knowledge is necessary.

The groups of the first kind include societies of geographers and of laymen who are interested in geography; associations of professional geographers and of teachers of geography; explorers', travelers', and mountaineering clubs; departments and institutes of geography

in universities and other educational institutions; and a multitude of scientific societies, museums, and research organizations, which specialize in such subjects as geology, climatology, oceanography, biology, ecology, anthropology, and the other natural sciences, and in the social studies. These organizations may be local, national, or international in scope. Many issue publications and a few maintain research staffs. While the activities of some of these groups are designed first and foremost to benefit their own members, most of the groups seek to serve broader social purposes. Frequently groups in this category undertake geographical investigations in the interests of groups of the second category, and their services are enlisted by governments, especially in wartime.

Groups united by interests that are not geographical, as such, are of three main kinds: religious, economic, and political.

Religious groups, as represented by the church and the great monastic orders, once played a vigorous part in the advancement of geography. Much of the geographical learning of the Middle Ages reflected attempts of clerical scholars to reconcile lore handed down from classical antiquity and information derived from firsthand observations with the Bible and the teachings of the Church Fathers. Much more substantial contributions to geography, however, have been made by the Christian missionaries—in the great age of discovery by Dominicans, Franciscans, and Jesuits, and more recently by Protestants.

Among the economic groups which gather geographical information, we may refer especially to commercial, industrial, and public-utilities companies. Geography owes an immense debt to the great English and Dutch trading companies of the seventeenth and eighteenth centuries, and later to the whaling, rubber, mining, and oil companies whose operations in little-known and undeveloped parts of the world have necessitated the making of countless surveys, maps, and geographical reports. Modern corporations serving highly developed communities also undertake detailed surveys of the distribu-

tion of population and resources, and of social and economic conditions in the areas where their products or services are sold.

Political groups, represented especially by national governments but also by the governments of colonies, states, provinces, counties, cities, and the like, probably do more than all other organized groups to promote the advancement of geography. They maintain agencies which carry on surveys in their own territories and, in the case of many sovereign states, in other parts of the world as well. Most of the detailed and systematic information today available concerning the topography of the lands, the hydrography of the oceans, and the distribution of natural resources, climatic elements, population, industries, occupations, and social and economic conditions is derived from maps, statistics, and other documents issued by governments.

In conducting surveys and other geographical studies governments usually have in view either the publication of information for their citizens to use in private enterprises, or the securing of information—some of which may not be published—primarily for the use of governmental agencies. Many studies serve both purposes.

The interests of the professional group to which a geographer belongs—whether it be university, government agency, or research institution—influence the choice of the subjects of his investigation, although he often enjoys considerable freedom. Beyond the immediate group, the intellectual, social, political, and economic climates of the place and time in which he lives provide the conditions of his personal preference. These changing climates favor some types of study and blight others. Few geographers have the hardihood and opportunity deliberately to pursue studies to which they know the climate is hostile, though to do so might on occasion be in the best interests of science and of society.

These climates have been disturbed since 1914. The storms of war, economic depression, and human suffering have profoundly affected the trends and the objectives sought in geographical investigations of all kinds. They have placed a premium of social approval on research

and educational programs that bear directly on large problems of national, regional, or local welfare, as distinguished from studies of a more recondite kind. In Germany the storms produced Geopolitik. In the United States, they have led to a closer collaboration between geographers and scholars in other fields in the coöperative investigation of many problems—such as those connected with the exploitation and conservation of natural resources, the movements of peoples and the opening up of undeveloped regions for new settlement, and a host of problems related to the winning of the war, and today to the establishment of peace. The tabulation given on pp. 276-294, below, of American geographers according to the subjects of their research sheds light upon these problems.

Many of these problems are concerned with plans of action. The geographer's function here is to help provide the foundations of integrated data upon which action must be based and to which it must be adjusted if it is to succeed. Frequently such research is conducted largely with a view to its potential value in future action along lines not definitely foreseen. Sometimes, on the other hand, it is carried out as a fundamental part of the formulation of a plan—whether for a village, a city, a region, a nation, or for the reconstruction of a war-shattered world.

Disinterested motives.—The noblest motives that impel individuals to carry on geographical studies—or any other kind of investigation, for that matter—are those that are disinterested, that spring from a desire to serve mankind as a whole through the objective quest for truth. Practices of two main kinds impede this quest. One is the waste of time, energy, and talent upon studies that may yield personal satisfaction but add little that is new or of consequence. The other, more serious, is the suppression or distortion of the truth as a result of conflicting individual or group pressures.

Obviously no prescriptions can be laid down to guide one in deciding whether the geographical investigation of a particular topic or area is worth while. It might well be borne in mind, however, that,

if the geographer wishes to select a small area for study, he should make sure that no one else has already dealt in much the same manner with an essentially similar area in the same region. Otherwise his work, though it might be of some local interest to the inhabitants of the area itself, will add nothing substantial to human understanding. There are too few geographers to warrant research of extremely narrow scope unless it discloses principles of wider application, or to justify reduplication in purpose and ideas or the adding of mere embroidery to basic concepts already developed.

If new truths are to be learned, men must share the knowledge that they have already acquired. The advancement of science is retarded by the failure to publish or otherwise make freely available the results of investigations. Human fear, jealousy, and selfishness cause many individuals and groups to keep their knowledge to themselves. Even scholars and scientific institutions are sometimes secretive about researches which they have under way lest others steal the results and deprive them of the kudos they might otherwise receive. Temporary secretiveness is often justified, but when prolonged, it has been known to degenerate into a dog-in-the-manger attitude. Business corporations which carry on geographical studies in their own interests are more likely than not to keep their maps and reports locked in confidential files. Among government agencies bureaucratic policy frequently brings about the suppression of the results of important studies through fear of criticism in the press, in Congress, and from higher government officials. National interests demand the suppression of geographical information of value to actual and potential enemies, and during wartime the dissemination of much geographical information—particularly in the form of detailed maps and statistics—is subject to a complete scientific blackout in so far as the public is concerned. Nearly every geographer sooner or later becomes acutely aware of the fact that, in addition to the data that he may observe in the field and gather freely in the library, there also exist large stores of information concerning matters on which he is working

to which access is difficult and often impossible. Tact, diplomacy, "pull," and, best of all, a reputation for devotion to disinterested scholarship frequently may overcome many of the obstacles.

FIELD WORK AND INDOOR WORK

The primary facts with which geographical research has to do cannot be brought into a laboratory and examined under a microscope or in a test tube. They may be directly observed in the field only. It does not follow, however, that no geographical study is scientifically sound unless it is undertaken in the field. Most geographical investigations deal with subjects far too complex and regions much too large for any human being personally to observe and record all that is needed. Reliance must be placed, in part at least, on the records of firsthand observations that others have made.

Geographical investigations in which the observations of others are accepted uncritically are of course unscientific. Much of the geography of the learned writers of the Middle Ages was of this nature—a body of erudition with little scientific quality in the modern sense despite the diligence of the compilation and the ingenuity of the reasoning that it often discloses. Many of the matters that the modern geographer has occasion to investigate *must* be studied in the field. This is particularly true of problems that affect the welfare of specific communities in specific areas—problems on which existing maps, statistics, and reports shed little or no light and about which the most revealing data can be discovered only by looking for them on the spot, talking with people, examining the earth's face for telltale evidence that others have missed, and making one's own new maps and new statistics. Furthermore, field studies normally add life and authenticity to geographical writings—though many geographical works of distinction have been based on "indoor" work alone.

It should be borne in mind that in some respects geography is more akin to history—which is based almost entirely on the interpretation of documentary evidence—than it is to physics or chemistry or geol-

ogy. But even the physicist or chemist must go to the library and take stock of what others have done and are doing in his subject.

In short, the advancement of geography demands both field work and the examination of documents, and it hardly behooves either the more "bookish" or the more "out-of-doors" geographer to rationalize a personal preference for the one or the other mode of investigation into a conviction that it is intrinsically the more worthy from the scientific point of view.

GEOGRAPHICAL DESCRIPTION AND INTERPRETATION

The immediate purpose of geographical research is the description or interpretation, or both, of certain terrestrial facts. *Geographical description* discloses or portrays the relationships in space on the earth's surface of different facts to one another, as the relationship, for example, between the position of New York and the course of the Hudson River. *Geographical interpretation* aims to show *why* such relationships exist or have existed.

Many geographical works consist entirely, or in large part, of descriptive matter: for example, gazetteers, census statistics, geographical handbooks, books of travel, lectures of the travelogue type. The data presented on the majority of maps are descriptive rather than explanatory, as is also the information that statistical analysis may yield with regard to mathematical correlations between the distributions of different phenomena. Description is often based on extremely refined methods of analysis and synthesis, requiring technical skill and judgment of a high order. Accurate description is the foundation for interpretation. If our information as to how things are arranged on the earth's surface is unsound—if it is based, for example, on faulty generalizations or uncritical acceptance of information at second or third hand—our conclusions as to why they are so arranged are likely to be shaky.

It is possible to draw inferences as to cause and effect directly from descriptive geographical works—maps, for example. One may cor-

rectly conclude from a map that a certain region is uninhabited because it is a desert or that a bend in a railroad is due to the windings in a valley, or that a town is located in a particular place because there is a coal field nearby. While these are not the sole causes—there is no sole cause for anything—they are at least important causes among many. The map, however, does not state them as causes, but leaves it to the reader to draw his own conclusions. In their professional studies, geographers are seldom content with merely describing terrestrial relationships or portraying them as does a map, and letting it go at that. One of the main objectives in geographical research is the discovery and understanding of causal connections between terrestrial circumstances. Geographical interpretation seeks to disclose such connections.

Many of these connections defy ready explanation in terms of what now exists. Why does a river run parallel to a range of mountains for fifty miles and then turn abruptly and cut through the range in a deep gap? Why is a port located on a particular harbor, when there are equally good harbors in the vicinity? To explain relationships of this sort one must look back into the past—either to the geologic past or the human past. Hence, in so far as geographical research seeks to explain and interpret, the element of time must be reckoned with—just as, conversely, it is inescapable that the element of space must be reckoned with in historical research. For this reason history and interpretative geography are inseparable, however much their purposes may differ.

The ultimate purpose for which a geographical study is undertaken and the good judgment of the investigator determine the particular causal connections sought for and how far chains of causation need be traced back in time. Frequently a general cause for the existence of geographical circumstances may be discovered but not the specific cause at a particular place. We may, for example, explain the presence of landslides on a mountain range with reference to slope, rock, soil, and climate; but the occurrence of a particular slide at a particular

place may be due to some unknowable and accidental event—a stroke of lightning, perhaps. Many of the facts of “human geography” today can be explained only by reference to unrecorded happenings, some of them far from the places where their effects are now evident.

Geographers have long been especially concerned with the causal connections between “man” and “nature.” Here the processes of cause and effect operate in two directions. Man compels nature to change its aspects when he clears forests, reclaims swamps, dams streams. Nature, on the other hand, compels or induces man to do certain things and acquire certain characteristics. It is not always easy to draw clean-cut distinctions between these processes. When a flood sweeps away a house and family there is active physical compulsion on the part of nature; and nature alters men’s bodies through the direct physiological influences of climate, insects, bacteria, and the like. Most human activities and conditions, however, are determined immediately and directly by the human mind and only indirectly by nature. When men leave a countryside because of drought, the drought does not physically push them out; they leave, rather, because they fear the consequences of staying, and such an exodus might therefore be called an enforced adaptation to nature. When men build roads along valleys instead of over hills, or cultivate fertile soils and leave the barren lands unoccupied, they both alter nature and voluntarily adapt themselves to it. Because it is hard to draw the line between the acts that are voluntary and those that are enforced, it is often a question of playing with words whether a human condition be called the result of environmental control or merely a voluntary adaptation to the natural environment. Yet geographers have argued at length over this matter. The tendency today among American geographers is toward caution in explaining human activities and conditions as the direct result of compulsion by nature. “Environmental determinism” is not so common as it was when the complexity of geographical circumstances and their causes was less fully

appreciated. Most of our geographers are circumspect in generalization with regard to "influences of the natural environment"—more so, perhaps, than some of their colleagues in other fields.

Through their professional studies geographers have done much to increase and deepen knowledge of what nature impels man to do and be and of what man does to nature. The soundest work of this kind has dealt with specific conditions in specific regions. The pressure of social and national interests is leading to increasing emphasis on research designed to serve as a basis for definite prescriptions with regard to better adaptations that man may make both to and of nature.

In discussions of geographical research the idea is occasionally expressed, or implied, that geographical description is of a lower order of merit than interpretation. The fallacy here is not unlike the fallacy that field work is intrinsically more "scientific" than library work. Whether or not, in a particular study, a geographer should engage primarily in explaining or primarily in describing depends on the purpose of the study. If the purpose, for instance, be to present information basic to a plan of action—a military campaign, the settlement of a region, the future development of a city—description may be far more to the point than explanation. Similarly, in a study undertaken not for any immediate practical reason but in order to give a more or less well-rounded understanding of a region as a whole, it may not be at all desirable to confine the treatment to matters capable of explanation and to the explanation of those matters, since many of the spatial relationships that give the region its character either defy explanation or else may be adequately explained only by going very far afield. In other words, judgment and balance play a large part in geographical research, which is an art for which specific definitions and rules cannot be laid down; an art in which the media and methods must be adapted to the particular problems that have to be solved; but, nevertheless, an art that must always be guided by a scientific habit of thought.

AIDS TO GEOGRAPHICAL RESEARCH

THE SUBJECT MATTER OF THIS BOOK

An aid to geographical research is anything actually used to facilitate research in geography, be it a published or unpublished document, a surveying instrument, a word of helpful advice, a sum of money. This book is concerned almost exclusively with published documents.

There are innumerable ways of classifying documents. A fundamental distinction is between classifications according to the subjects with which the documents deal and classifications according to other criteria. In this volume the references are entered under main headings representing their subjects and under subordinate headings representing other characteristics (for example, whether or not they are periodicals or government publications).

The material in this volume is classified primarily according to *geographical subjects*. Many aids to geographical research, however, are not specifically or exclusively geographical in nature or purpose. Some are designed for use in connection with investigations in fields allied to geography, such as history or geology. Others are universal or broadly comprehensive aids to investigations in all or many different fields, including geography.

Grouped according to their geographical subjects, aids to geographical research fall into three main categories:

1. There are aids of which the geographical subject in each case, either embraces the entire field of geography or at least is not definitely restricted to any specified parts of that field. Such aids, in turn, are of two kinds:

- a) Universal or comprehensive aids to studies in many different fields, including geography. References to these are given in the Introduction, though a few are also listed in Part I.

- b) General geographical aids. References to these are given in Part

I, General Aids, and a few are also listed in the Introduction. General geographical periodicals, however, are listed in Part III.

Since the aids in category 1 all bear potentially on the whole field of geography, they may be subclassified according to nongeographical criteria only. In the Introduction and in Part I a primary distinction is made between bibliographical and nonbibliographical aids.

2. There are aids of which the geographical subject in each case, though unrestricted in scope to any specified region, is nevertheless limited to the whole or a part of one of the main topical divisions of geography (for example, physical geography, geomorphology, human geography, city geography).¹ References to aids of this type are given in Part II, Topical Aids, under headings representing various topics. Aids of this category are also of two kinds:

a) Nongeographical aids bearing on fields allied to the several divisions of geography (for example, history, allied to historical geography; geology, allied to geomorphology). A number of these of very broad scope are listed in Part II.

b) Geographical aids bearing specifically on the several topical divisions and subdivisions of geography as such.

3. There are aids of which the subject in each case is limited in scope to a specified region or group of regions. These, together with general geographical periodicals, are listed in Part III, Regional Aids, under regional headings. The regional aids pertaining to any given region or subregion also fall into four main groups corresponding to the groups enumerated under 1 and 2.

Most of the references in this book are to bibliographical aids—works of which the purpose is to provide information about other works. Certain nonbibliographical aids, however, also are listed. These comprise a selection of world and regional atlases and also a

¹ American geographers customarily designate these as “systematic” divisions. In this book, however, the term “topical” is consistently used with reference to classification and “systematic” only with reference to a logical arrangement of classes or of items within each class. See below, pp. 31, 49.

number of comprehensive reference books such as manuals of general and regional geography, world gazetteers, and guides to the spelling of place names. Geographical periodicals and other geographical serials are also included, some of them of bibliographical value, others nonbibliographical.

Geographical as well as universal and comprehensive aids will be discussed in general terms in this Introduction. With a few exceptions, however, the references given in the text and footnotes of the Introduction are exclusively to universal aids and to certain comprehensive aids to research in fields allied to geography.

The reader will find that certain aids of outstanding utility not only are listed by title in the Bibliography but also are cited briefly with page references under various topical and regional headings. Works treated in this manner are the sixth edition of Mudge's *Guide to Reference Books* [1],² Lewin's *Subject Catalogue of the Library of the Royal Empire Society* [337], Martineau's *Bibliographie d'histoire coloniale* [331], and a few others. The titles of the most recent reports on the progress of geographical research appearing in the comprehensive *Geographisches Jahrbuch* [6] have also been entered under the appropriate headings, and care has been taken to include references to recent materials of bibliographical interest in the *Geographical Review* [476], a periodical readily available to American students. Owing to limitations of space, however, other geographical periodicals have not been analyzed to the same extent, nor do the two leading current geographical bibliographies, *Bibliographie géographique internationale* [7] and *Current Geographical Publications* [9] lend themselves to such analysis.

THE MUDGE-WINCHELL GUIDE

One bibliographical aid that might well be constantly used in conjunction with the present book deserves special mention at this point.

² Figures in square brackets refer to the serial numbers of the references in the Bibliography, below.

This is the sixth edition of Mudge's *Guide to Reference Books* with its three supplements (cited herein as "Mudge-Winchell" [1]). When in search of initial guidance to publications in almost any field, the American student would do well to consult this manual, which should be available in every library of any consequence in the United States.

Mudge-Winchell is divided in two main parts, of which the first deals with reference books of universal scope and the second with those pertaining to "special subjects." In the first part are listed encyclopedias, dictionaries, and other works having to do with periodicals, essays, and general literature, debates, dissertations, and the like. The special subjects include the social sciences, science (that is, mathematics, the natural sciences, and ethnology), the useful arts, the fine arts, literature, biography, geography (confined mainly to gazetteers, geographical names, atlases, and guidebooks), history, government documents, and bibliography.

GUIDES TO INDIVIDUALS AND INSTITUTIONS

Although the present volume deals mainly with publications, the fact should not be overlooked that people and institutions may also be used effectively as aids to geographical research. Time can often be saved by consulting geographers, explorers, or librarians, as long as their good nature is not imposed on unduly. Geographical institutions such as the Association of American Geographers,³ the American Society for Professional Geographers,⁴ the Division of Geology and Geography of the National Research Council,⁵ and the geographical societies can usually put the student in touch with individuals familiar with particular regions or branches of geography, and a classified list of such individuals will also be found in the Appendix, pp. 276-294, below. During the war there was established in Washington the comprehensive National Roster of Scientific and Spe-

cialized Personnel, an immense classified card index of experts in many fields. Special lists of geographers, cartographers, and travelers compiled by the geographical division of the Office of Strategic Services have been deposited in the National Archives, Washington. The Ethnogeographic Board, with headquarters at the Smithsonian Institution, has compiled a card index of persons throughout the world "having varying degrees of familiarity with one or more foreign areas."

Biographical reference works on living persons—the various *Who's Who*, *American Men of Science*, and the like—are also of service.⁶ Naturally, examination of recent publications on a given topic or region will often acquaint one with the names of persons who might be consulted.

In planning almost any project of geographical research the student will do well to familiarize himself with the scientific organizations that are or have been concerned with the investigation of the topics or areas in which he is interested. Not only is it likely that their publications will be of value to him, but such organizations can often give him active help by permitting him to use their facilities and by recommending him to others. Before the war a number of guides to the learned institutions of all nations were published from time to time, the best known and most comprehensive of these being *Minerva: Jahrbuch der gelehrten Welt*⁷ and *Index Generalis*.⁸ In these may be

Concise information is given concerning each institution with the names of its principal administrative and scholarly personnel. In each part the material is arranged alphabetically by towns, and each part has several indexes.

International organizations are listed and their activities briefly described in a handbook issued by the League of Nations in 1938⁹ and information with regard to the publications of international congresses and conferences will be found in a union list¹⁰ which appeared in the same year. For a more extended introduction to the bibliography of such organizations, Mudge-Winchell should be consulted.¹¹

AIDS TO GEOGRAPHICAL FIELD RESEARCH

In going into the field the geographer is confronted with problems both of travel and of investigation. The purely practical problems of travel—organization, costs, equipment, leadership, protection from climate and disease, may be easy or difficult to solve, depending on the accessibility of the region visited and the size and purpose of the expedition. There are a number of manuals of advice for travelers [86, 87]. Scattered information may also be found in the published reports of scientific expeditions. Usually, however, published information is not altogether satisfactory, and the best policy in planning field

work in a particular area, if you have not been there before, is to consult others who have and profit from their counsel. The war, however, has given an immense impetus to studies of the needed equipment, supplies, and techniques for the conduct of expeditions in all parts of the world. Especially noteworthy investigations have been made by the United States Quartermaster Corps and the Arctic, Desert, and Tropic Information Center of the United States Army Air Forces. Some of the information that was accumulated by the armed forces during the war is now being made available to the public.

Techniques of field research for certain kinds of geographical investigation have been standardized and in many instances are explained in manuals and textbooks. This is true of comprehensive surveys of large areas conducted by governments and corporations—for example, geodetic,¹² topographic,¹³ hydrographic,¹⁴ or geological¹⁵ surveys which require instrumental observations. It is especially desirable that the professional geographer have some acquaintance with at least the elementary principles of topographic mapping in order that he may make his own base maps where suitable published maps are not available for use as bases.¹⁶

Unlike the surveyor or census taker, however, the professional geographer in his field studies can seldom follow any standardized rules as to what to observe and how to record his observations. Although he may sometimes find that techniques already developed by others are appropriate, more often he will be obliged to devise his own

methods. Specific field methods that have been followed by professional geographers have been described and discussed in countless monographs and periodical articles, but this material has not been gathered together and presented systematically in a single work. A comprehensive manual on the subject would be useful indeed, even though it did little more than give well-selected references to publications.

AIDS TO GEOGRAPHICAL STUDY INDOORS

The source materials upon which indoor geographical studies are based consist both of man-made objects, such as tools, artifacts, books, maps, and other documents, and of natural objects, such as specimens of minerals, soils, plants, animals. These materials are housed in libraries, archives, museums, and private collections.

Among the man-made objects employed in indoor geographical research, certain ones have been designed for the express purpose of conveying geographical information. These alone are properly "geographical documents," though, obviously, geographical information of great value may be derived from other documents and materials. A novel or a poem may convey such information. A piece of pottery when studied in relation to other artifacts may shed indirect light on the geographical distribution of a human culture. Hence aids to investigations of many different kinds may also serve as "aids to geographical research."

Methods of geographical research based on written and printed documents are so varied that no one has attempted to compile a general compendium of such methods. All documentary research, however, necessitates in the first instance critical analysis of the documents themselves. In his field studies the geographer is directly face to face with geographical realities, but when he uses documents that were designed to convey information and ideas about these realities, he sees the realities only as they have already been pictured in other men's minds. Consequently he must be doubly on guard against his

own intellectual limitations and those of the minds that intervene between him and the realities. While his interpretation of what the documents actually say may be above reproach, his whole study will be founded on sand if he cannot distinguish the true from the false or the suspect in the documents themselves. Procedures for the critical analysis of written documents have been developed and systematized by historians, and geographers might do well to enlarge their acquaintance with some of the historians' works on this subject.¹⁷ Students of the social sciences, on the other hand, are often more prone than are geographers to take geographical documents at their face value and might profit by greater awareness of the possibilities of error in the evidence that such documents—maps, especially¹⁸—present.

Guides to collections.—The source materials used in indoor research have been assembled in collections of two kinds, "closed" and "open." Closed collections are those that are housed in private dwellings, private libraries, business offices, and many governmental bureaus not open to the public. Such collections often yield priceless geographical information. Since there are virtually no published guides to the materials in closed collections, it must suffice here merely to remind the reader of their importance. The geographical student should never forget the possibility that, after he has exhausted the resources of open collections, the data that he most needs in connection with a particular subject may lie hidden in some closed collection of which he may have no knowledge. To gain this knowledge personal contacts are necessary. If you can once find out where materials exist in closed collections you need never hesitate to ask for permission to

¹⁷ Classic works on this subject are E. Bernheim, *Lehrbuch der historischen Methode*, 5th and 6th ed. (Leipzig, 1908), and C. V. Langlois and C. Seignobos, *Introduction aux études historiques*, 4th ed. (Paris, 1909; English translation by G. G. Berry, *Introduction to the Study of History*, London, 1898; reprinted 1912). consult them, and frequently such permission is forthcoming, since closed collections are not necessarily secret.

Open collections are of three main types: libraries, public archives, and museums (also botanical and zoological gardens). Certain publications describe such collections in broad terms. It is not always easy, however, to ascertain whether specific items exist in particular collections without writing their librarians or curators.

Libraries¹⁹ are either "general" or "special." A general library is one that aims to cover all fields of knowledge and all parts of the earth, or one of which the potential scope, at least, is unrestricted.²⁰ Special libraries are restricted to particular regions or other subjects.²¹ General libraries range in size from the immense Library of Congress with its millions of books down to the village public library with a few hundred. Only the very largest have sufficiently representative collections to be altogether adequate for detailed scholarly research in every branch of geography, though smaller general libraries frequently possess special collections²² sufficient for researches concerning particular geographical subjects.

²⁰ The American Library Association Board on Resources in American Libraries has recently investigated the leading libraries of the United States with a view to determining which contain outstanding collections. A list of 76 subjects was drawn up, and about 500 authorities were asked to state where, in their opinions, the best library collections in these fields are held (R. B. Downs, "Leading American Library Collections," *Library Quarterly*, 12 (1942), 457-473). As rated by these authorities the leading ten libraries of the country, in terms of the number of fields represented by outstanding collections, were, in descending order: Harvard, Library of Congress, University of California, Columbia, University of Michigan, New York Public Library, University of Pennsylvania, University of Chicago, Yale, Cornell.

²¹ See *Special Libraries Directory of the United States and Canada* (New York, Special Libraries Assn., 1935), 253 pp. In the main list, arranged by localities, data are given for each library concerning its staff, size of collections, the subjects represented, special collections, etc. Subject index. Does not deal with special collections in general libraries.

²² E. C. Richardson, *An Index Directory to Special Collections in North American Libraries* . . . (Yardley, Penn., F. S. Cook and Son, 1927), 168 pp. Contains two alphabetical indexes, one by localities, the other by subjects. For most of the collections the approximate number of volumes, but no other information, is given.

For 76 subjects classified under the following main headings, Downs ("Leading American Library Collections") lists American libraries in which there are outstanding

While a special library may not contain a larger or better collection of works on its field than may be found in the largest libraries, a special library is usually more conveniently organized for studies in that field. It is likely to be catalogued in greater detail and according to a system of classification adapted to the field. Its books and other documents may be consulted more rapidly because they are concentrated in a small space instead of scattered through an immense building. On the other hand, special libraries do not usually possess many works marginal or auxiliary to the specific study that the student is likely to pursue in them and to which he may well wish to refer.

The special libraries and special collections within general libraries that are of particular value to geographers are, naturally, those devoted to geography [37, 38] and allied subjects. Such collections are often arranged or catalogued by places and regions as well as by other subjects. Regional collections may consist largely or exclusively of materials on the history, art, literature, manners and customs, or natural history of a region and be arranged or catalogued with little or no thought regarding the geography of the region. In a truly geographical library, on the other hand, there is always a nucleus of strictly geographical documents, and in addition, a greater or lesser quantity of other material of potential value in geographical studies. While geographical libraries may contain unique and rare regional and geographical documents, copies of many of their current books are available in other libraries.

collections: literature and languages, history (United States, Latin American, medieval, English, French, German, Italian, Spanish, Near East, Middle East, Chinese, Japanese, First World War), fine arts, philosophy and religion, social sciences, economics, science (includes among other subjects: geology, geography, maps, botany, zoology, anthropology and ethnology). Except under history the subject headings are topical rather than regional (see p. 30).

The bibliography (pp. 49-170) contains a brief section on geography and also under the headings "Americana" and "History" references to printed library catalogues and union lists pertaining to specific regions and states in the United States and to certain foreign countries.

For various groups of libraries union catalogues²³ and union lists²⁴ have been compiled which indicate the collections in which copies of each work listed are kept, and there is a comprehensive *Union List of Serials*²⁵ covering the holdings of a large selection of popular, scientific, and technical serials in most of the important general and special libraries of the United States.

The entire catalogues of a few libraries have been published²⁶ and many libraries publish lists of current accessions. All students of geography should know that it is not necessary actually to visit the largest libraries in the world—the Library of Congress, the Harvard University Library, the Bibliothèque Nationale, and the British Museum—in order to consult their catalogues. In whole or in part these are available for reference (in the form of cards or of books) in many of the large libraries of this country.

Public archives—collections of manuscripts of permanent historical value—are of particular interest to students of the historical aspects of geography. The National Archives of the United States in Washington, devoted to manuscript and other materials from the files of the various federal departments, contains many maps and geographical reports, and a professional geographer is in charge of its map department.

Although geographers are not in the habit of making much use of museums²⁷ and botanical and zoological gardens, an immense amount of geographical information has nevertheless been gleaned from their collections—information with regard to the distribution and interrelationships of the physical features of the earth's surface, of plant and animal species, and of human cultures. The utility of a museum for purposes of geographical study depends largely upon the manner in which its exhibits are arranged. In many modern museums there has been an increasing emphasis upon regional arrangement as distinguished from arrangement by orders, species, and genera, or by historical periods, or other nongeographical criteria. Regional museums—museums devoted to the natural history or culture of particular regions—have also been maintained in many places, although they are not ordinarily directed by geographers and their exhibits are sometimes heterogeneous. We have no strictly *geographical* museum in this country,²⁸ though there are a few small geographical exhibits in certain of our university departments of geography. Before the war there were two distinctively geographical museums in Europe—at Leipzig [39] and Leningrad [40]—but whether they have survived is not known to the writer. Geographical museums and exhibits contain such geographical documents as flat and relief maps, globes, and models. They also contain photographs, landscape paintings, dioramas, and specimens of many kinds. Their effectiveness depends on the selection, arrangement, and labeling of the objects, most of which in themselves do not differ intrinsically from objects found in nongeographical exhibits.

The use of bibliographical aids.—The student making up a list of references to publications to be consulted in connection with a geographical study may adopt either a hit-or-miss method or the more systematic procedure of going through bibliographical aids. The hit-

²⁸ The St. Paul Museum, St. Paul, Minn., has recently developed some striking exhibits of globes, maps on spherical surfaces, and map projections (see L. H. Powell, "New Uses for Globes and Spherical Maps," *Geog. Rev.* [476], 35 (1945), 49-58).

or-miss method is to compile references solely from the text or footnotes of books and articles bearing on the subject under investigation. One work leads to another, and in the course of time a considerable quantity of references may be amassed. The method obviates disagreeable searching through bibliographies and pawing over card catalogues and for some subjects is sufficient, but it has disadvantages. The bibliographer and the writer approach the literature of a particular subject from different angles. The writer is interested primarily in the subject itself. Most of his references in footnotes are intended to substantiate assertions in his text. He is likely to regard fussing with bibliographical details as a nuisance and for this reason to make mistakes and omissions. The bibliographer, on the other hand, is interested in the literature of the subject for its own sake. His bibliographical instinct is like that of the collector of books or works of art, an instinct that impels him to strive for completeness and to regard with almost loving care each reference in his collection. The bibliographer's enthusiasm for books as books, articles as articles, maps as maps, may, however, exceed his critical knowledge of their subjects and lead him to list worthless or unimportant publications. Even so, his bibliography will usually be of greater service than are most casual footnote references in regard to the correct spelling of names, titles, and places, and in its consistency and accuracy as to dates, number of pages, and the like.

Casual references may, of course, disclose pertinent materials not listed in the available bibliographies and library catalogues, and no serious student can afford to ignore the casual references in books and articles on his subject. It is only when he relies on them alone that his method is hit-or-miss.

Geographers are sometimes asked to recommend a "bibliography of geography" covering the entire subject. No such work exists. Indeed, there is no single comprehensive up-to-date bibliography giving references even to the writings of professional geographers for all regions and all branches of geography, and a complete bibliography

of all publications of potential value to the geographer would have to embrace a large proportion of everything in print.

Geographical studies, like studies in history, require the use of very diverse bibliographical aids. In this respect they differ from studies in many other fields. The research worker in classical archeology, meteorology, or ornithology, for example, may consult, if not a single bibliography for the whole of his field, at least a limited number of aids from which he may obtain virtually all the references he is likely to need. The geographer can seldom rely on geographical bibliographies alone. While he need not try to acquire a profound knowledge of the whole realm of bibliography, he should know the principal landmarks in this realm, in order that he may pick up a trail and follow it without having to depend too largely on the guidance of librarians. The librarians of large libraries may render great help, but they are unlikely to be familiar with the specific applications of bibliographical material to geographical purposes, and, unfortunately, geographical studies cannot always be pursued in geographical libraries.

Bibliographical aids vary as to the quantity and quality of the information that they furnish. For almost any broad subject, aids that aim to be complete usually provide less detailed information about the individual items than do aids that are more critically selective. The information concerning specific items given in comprehensive aids and those intended mainly for the use of librarians and bibliographers is likely to include more details about the external and physical characteristics of a work than about its contents. Special aids for the scholar and scientist are better guides to quality. For the use of scientists bibliographies that include the titles of books only are normally of much less value than those that also contain references to periodical articles, since many of the most significant results of scientific research never find their way into books. Other things being equal, a bibliographical aid that furnishes information about separate maps and maps in books and periodicals is of more use to the geographer

than one that fails to do so. Book reviews and bibliographies in which the references are selected and annotated are of value when prepared by persons familiar with the subjects with which they deal. But book reviewers have been known to be ignorant or prejudiced, and the maker of even a critical bibliography cannot be expected to have a thorough mastery of the entire subject that he attempts to cover. A bibliographical aid, like any other document, must be used with discrimination.

Classification and arrangement of the material in bibliographical aids.—The utility of a bibliographical aid depends hardly less on the manner in which its materials are classified and arranged than on the nature of the materials themselves.²⁹ By *classification* is meant the grouping of the materials according to classes; by *arrangement*, the order in which the several classes and the individual items within each class are presented. The arrangement may or may not be related to the classification. Obviously there is no such relationship where the arrangement is alphabetical. In most bibliographies the classification of the titles is either by author or by subject; occasionally it is based on other criteria, such as date, publisher, place or form of publication. Frequently different principles of classification are followed in different parts of the same bibliography.

For purposes of geographical research it is important to distinguish between three types of subject classification.

First, there are *place* or locational classifications in which the materials are grouped according to the names of specific geographical places, regions, or features—countries, states, mountains, oceans,

²⁹ On geographical classification see S. W. Boggs, "Library Classification and Cataloguing of Geographic Material," *Annals Assn. Amer. Geogs.* [479], 27 (1937), 49-93 (noted in *Geog. Rev.* [476], 27 (1937), 688-689; see also [20]); F. F. Outes, *La determinación de las fuentes de la geografía nacional: Agrupación sistemática de la bibliografía geográfica y regesta cartográfica de la República*, constituting Facultad de Filosofía y Letras de la Universidad Nacional de Buenos Aires, *Publicaciones de la Sección de Geografía* . . . No. 3 (Buenos Aires, 1921); also two papers on the same subject by the same author in *Anales de la Sociedad Científica Argentina*, 88 (1919), 173-209. See also [107].

rivers, capes, cities. A regional (or areal) classification is one variety of place classification. Place classifications are commonly called "geographical," but the former term is preferred in order to distinguish them from geographical classifications of the third type, described below.

Second, there are *topical* classifications, in which the materials are grouped according to nonlocational criteria. Any fact or concept that is not related to a specific place may, somewhat arbitrarily, be designated as a "topic." Geographical topics may represent features of the earth's surface when considered generically rather than specifically. Thus, in a topical classification some of the material might be grouped under such headings as "Mountains," "Rivers," and so on, whereas in a locational classification such headings as "The Alps," "The Amazon," would appear. Classifications by bibliographical subjects, which will be discussed in the next section, form one variety of topical classification.

Third, there are *geographical* classifications. These are designed primarily to meet the needs of geographers or others engaged in geographical research. They are not distinct from or coördinate with classifications of the first two types but may be either by places or by topics, or else, as in the present volume, in part by places and in part topical. The place subjects in geographical classifications do not differ essentially from those of other place classifications. The topics usually comprise the various topical aspects or branches of geography (physical, human, economic, and the like) and other topics in which geographers are likely to be interested.

Where the classification of the materials in a bibliographical aid is either topical or by places, the arrangement may bear some definite, logical relationship to the scheme of classification. Thus, if the classification is by places, the references might be entered by major headings for continents with subheadings for the countries in each continent, and minor subheadings for the states and provinces in each country, the order of the various headings and subheadings being

determined by the relative positions of the several areas (for example, the areas could be arranged in "tiers" from north to south, with the headings within each tier from west to east). A logical arrangement of this sort may be designated a *locational* arrangement. Similarly, where the classification is topical, the arrangement may be by major topics, subtopics, and minor subtopics (for example, orders, genera, species), the sequence of the various topics and subtopics being based in so far as possible upon some relationship between them. Such logical arrangements are designated in this book as *systematic*.

On the other hand, the arrangement may be wholly unrelated to the classification. For example, a classification might be by places or topical, with the subject headings arranged alphabetically or chronologically.

Bibliographical aids are often used for looking up details, such as the title, date, publisher, and price of a work of which the author's name is known, or the author of a work of which the title is known. For such purposes classification by author and title with alphabetical arrangement is obviously the most convenient; for this reason, also, an aid in which the arrangement is logical is usually accompanied by an alphabetical author index. Again, if the student remembers that a work exists on a certain specific subject but has forgotten its author and title, a reference to the work in question can often be more easily found in an aid or index where the subjects are arranged alphabetically than in one in which they are arranged logically.

The principal disadvantage of alphabetically arranged subject classifications (including those of the "dictionary catalogues" found in most libraries) lies in the fact that they tend to scatter the references pertaining to many related subjects. In them, for example, under such subject headings as "New England" or "Transportation" will ordinarily be found references solely to works that deal with New England as a whole, or with transportation as a whole, or in the titles of which the words "New England" or "transportation" happen to appear. These, however, might comprise only a small fraction of all

the references relating to New England or to transportation, for example, those classified under "Maine," "Boston," "White Mountains," "North Atlantic states," or under "roads," "railroads," "airways," and so on. In other words, the items entered under a subject heading in an alphabetically arranged aid are usually restricted to those that bear on that specific subject as a whole and do not include those that bear on parts of the subject or on larger subjects of which the subject itself is a part. This may be a considerable disadvantage for the student of geography who wishes to compile a list of references pertinent to a whole region or whole topic. Skillful cross-referencing helps overcome some of this difficulty, but cross-referencing is seldom worked out so thoroughly as to insure against the risk of overlooking references of importance.

Aids in which the material is arranged locationally or systematically are therefore nearly always of greater value for use in compiling lists of references on a given subject than are alphabetical aids. There is, however, no universal scheme of classification and arrangement suited to *all* types of research. Such comprehensive schemes as the Dewey decimal system or the Library of Congress system have many advantages for general purposes but seldom satisfy the specialist. On the other hand, classifications designed especially for one field of investigation may not work at all well in another. For example, references to publications on nutritional plants of interest to the agronomist or agricultural geographer would be widely scattered throughout a botanical bibliography classified according to taxonomic principles.

Hence, no matter how well organized and carefully indexed it may be, a bibliographical aid will never completely suit all who may consult it. No bibliographer can foresee and provide for all the possible subjects or combinations of subjects with which the users of his bibliography might conceivably be concerned. Since geography deals largely with regions and areal distributions on the earth's surface, the effectiveness of a bibliographical aid as a tool for geographical research depends largely on its organization in these respects. If its or-

ganization is such that one may easily run down references to works dealing with the specific regions or with the geographical distributions in which one is interested, a bibliography or catalogue is usually of more use to the geographer than one that obliges him to make protracted searches.

THE PRINCIPAL TYPES OF BIBLIOGRAPHICAL AID

a) Bibliographical aids considered in terms of their bibliographical subjects.—Every bibliographical aid to geographical research may be said to deal with both a geographical and a bibliographical subject. The geographical subject is the aspect of geography—it may include the entire field—covered by the documents about which the aid provides information. The bibliographical subject is the kind or category of documents with which it deals, as determined by criteria unrelated or only indirectly related to their subject matter. The bibliographical subject of a guide to United States government documents on climatology is United States government documents; the geographical subject is climatology. In this section bibliographical aids will be considered in terms of their bibliographical subjects. In connection with the various types mentioned, references will be given to certain universal aids and comprehensive aids of especial value to geographers, as well as to the pages in Mudge-Winchell where additional data may be found.

The criteria most frequently applied in defining the bibliographical subjects of aids to research are of six kinds: criteria of (1) representation in libraries, (2) date of issue, (3) place or language of publication, (4) producer, (5) mode of issue, and (6) form or purpose. These, of course, are not mutually exclusive. Indeed, criteria of all six types might conceivably be applied together, as, for example, in a hypothetical list of educational (6) periodicals (5) in the Library of Congress (1) published by commercial publishers (4) in the United States (3) before 1850 (2).

1) Representation in libraries.—Library catalogues, union cata-

logues, and union lists are the principal bibliographical aids for which representation in libraries is the basic criterion of selection. Such aids, when published, may often be used as bibliographies as well as for the purpose of finding out whether one or more specific libraries possess the works listed in them. The published catalogues of the world's great libraries, to which we have already referred (p. 25), are fundamental bibliographical tools, and many catalogues of special libraries are also of considerable value for research purposes [20, 21]. By and large, however, a library catalogue is likely to contain more heterogenous material and material of more uneven quality than do critically selected bibliographies covering the same subjects.

2) Date of issue.—Bibliographical aids may be either current or retrospective. Current aids, issued periodically or at frequent intervals, record contemporary publications. Retrospective aids aim to furnish complete or selected references to publications that have appeared during a specified or indefinite period in the past. In actually using bibliographical aids of either type to compile a list of references, the student will frequently find it advisable to begin with the most recent ones and work backward chronologically as far as seems necessary.

3) Place of publication or language.—In nearly every civilized country books published in that country are regularly recorded in current trade repertories that appear periodically at frequent intervals and are published in cumulative form every now and then.⁸⁰ For certain countries and also for certain languages there are also retrospective lists and bibliographies of books that have been printed in those countries or languages during specified periods. Such aids⁸¹ may be used to advantage in order to ascertain titles, authors' names, places, dates, publishers, prices, and the like, but for purposes of research in compiling lists of references their value is more questionable,

since they give an immense quantity of titles, including many of little or no significance.

4) Producer.—The producers of a document are its author, its publisher, and sometimes a sponsor as well. Obituary notices and biographical memoirs,³² the various biobibliographical reference works,³³ and the author entries in card catalogues and bibliographies provide information regarding the works of individual authors. The sponsor of a publication may or may not be identical with its publisher. Many institutions, such as universities, sponsor works that they do not publish—as in the case of doctors' and masters' dissertations (which may be of considerable utility in geographical research [33] and for which lists are available).³⁴ Commercial publishers' catalogues, lists of the publications of congresses,³⁵ international organizations, scientific societies, and other learned institutions,³⁶ and guides to government documents³⁷ are bibliographical aids for which

³² Short obituary notices of geographers and explorers are published in the *Geographical Review* [476] and other geographical periodicals. More extensive biographical memoirs of late members of the Association of American Geographers will be found in the *Annals of the Association of American Geographers* [479]. References to obituary notices and biographies of geographers are given in the *Bibliographie géographique internationale* [7], in *Current Geographical Publications* [9], and in the numbers of the *Geographisches Jahrbuch* [6] covering 1888–1903 (continued in *Geographen Kalender* [725] through 1914). See also the geographical encyclopedias of Banse [70] and Kende [69] containing short articles on a few outstanding geographers and explorers. Paul Lemosof, *Le Livre d'or de la géographie: essai de biographie géographique* (Paris, 1902), is a biographical dictionary of "explorers, geographers, [and] cartographers who have contributed to the actual state of our knowledge of the earth from the earliest times to the end of the nineteenth century" (the comments on each individual are seldom more than three or four lines in length).

the criterion of selection is the publisher. Of these, guides to government documents are by far the most valuable in geographical studies, since the material in government documents is often inadequately catalogued in libraries and is seldom fully listed in bibliographies.

5) Mode of issue.—Some documents are issued as wholly independent units; others as parts of sets, series, or serial publications. For many of these there are lists and indexes. Since most of the books and monographs that form parts of series are catalogued and entered in bibliographical aids as if they were independent items, the student of geography is unlikely to have much need of lists of the items in such series unless he wishes to check an incomplete series in his own or some other library, or to use the lists in connection with a study of the work of the institution that has sponsored or published the series listed.

In the case of serial publications the problem is different. Serial publications, which are issued at regular or more-or-less regular intervals, are of two kinds: (1) serials that systematically present in successive issues the same sort of information brought up to date, as, for

example, yearbooks, almanacs,³⁸ and current bibliographies; and (2) periodicals and other serials (such as transactions of learned societies) which present a variety of separate items that differ from issue to issue.

For both types of serial there are reference works listing the serials by topics or place of publication and giving data with regard to their character, editors, publishers, subscription prices, and so on.³⁹ Likewise the individual volumes of both types are usually provided with indexes, and for many serials cumulative indexes to a run of volumes are issued from time to time.⁴⁰ In addition, for certain selected groups of periodicals, including not only popular magazines but also many scholarly and scientific journals, there are bibliographical indexes⁴¹ in which the student may look up references to articles or book reviews,⁴² alphabetically arranged by author, title, and subject. Since material in periodicals is seldom catalogued in general library catalogues, indexes of this kind, particularly the indexes to geographical periodicals,⁴³ may be useful indeed in geographical studies.

6) Form or purpose.—Finally, the bibliographical subject of a bibliographical aid may be restricted in scope to works of particular physical forms, such as manuscripts, printed texts, bound volumes, or

pamphlets, or it may be restricted to works in which information and ideas are expressed through particular media, as in the case of texts, mathematical tables,⁴⁴ maps [92-107], or photographs [8, 9]. A bibliographical aid may deal exclusively with works of certain specified literary forms, such as nonfiction, novels [30, 32], or poems, or with works designed to serve certain specific purposes, as in the case of scientific monographs, census reports and other statistical works,⁴⁵ atlases [108-131], textbooks [22-29], guidebooks [88-91], gazetteers [65-73], indexes,⁴⁶ and bibliographies [3-5].⁴⁷ Some of these criteria of form or purpose are wholly unconnected with any geographical subject; a novel or a manuscript may deal with almost anything under the sun. Others, however, are inherently geographical as well as bibliographical; maps, gazetteers, and guidebooks necessarily deal with geographical subjects.

b) *Bibliographical aids considered in terms of geographical subjects*.—In terms of their geographical subjects, the aids listed in Part II are topical but not regional. With the exception of the geographical periodicals, those listed in Part III are all regional, though in many

instances they are confined to particular geographical or bibliographical topics concerning the several regions.

The *topical aids* of greatest service in geographical research are (1) geographical aids to research in the various branches of geography and (2) nongeographical aids designed for use in related studies in which a large measure of attention is given either to geographical distributions, or to the nature of the regional subdivisions of the earth's surface, or to the question of human and other forms of life in relation to the natural environment. Aids of both types are listed in Part II, and their classification may be readily understood by looking over the headings in Part II itself. It often happens, however, that the student of geography may wish to carry his researches so far into the domain of a related field that the aids referred to in Part II will not suffice and he must turn to other bibliographical tools. A number of fields into which geographers are likely to have occasion to penetrate are listed below. Each of these studies is sufficiently well developed to be represented by at least one scientific or scholarly journal in the English language, and many are represented by several journals.

Fields pertaining primarily to the natural environment: science in general; natural sciences in general; geodesy; geophysics; geology; glaciology; economic geology; petroleum geology; geomorphology; soil science; meteorology; climatology; oceanography; biology; ecology; botany; plant ecology; zoology; animal ecology.

Fields pertaining primarily to man: history in general; ancient history; medieval history; modern history; agricultural history; maritime history; economic history; history by countries; history of particular regions within countries; archeology; anthropology; ethnography; economics; agricultural economics; land economics; sociology; political science; military science.

Fields pertaining to techniques of acquiring, applying, disseminating geographical knowledge: surveying; photogrammetry; statistics; navigation; education.

A regional aid to geographical research may cover a limited number of geographical or bibliographical topics or else may seek to cover a very wide range. Normally the larger and more complicated the region, the more unsatisfactory is a regional aid that aims to deal with all manner of works on all manner of subjects relating to it. Such aids are never complete and seldom critical.

A bibliographical aid may be regional in effect even though nominally it does not deal with a region, as such. The publications of city, provincial, and state governments and also of those agencies of national governments concerned mainly with interior affairs and resources (for example, the United States Land Office, United States Geological Survey) deal for the most part with particular regions, and bibliographies of such publications are essentially regional. Much the same is true of the publications of small learned institutions, local geographical societies, and the like.

It is also not easy to draw the line between geographical periodicals that are actually general in scope and those that are nominally general but actually regional in scope. Partly because of this difficulty and partly because in all general geographical periodicals somewhat more emphasis is placed on the home country than on other parts of the world, we have listed general geographical periodicals in Part III rather than in Part I, where they might more logically be placed.

The classification and arrangement of the material in Parts II and III approximate those of the Research Catalogue of the American Geographical Society though [20], modifications have been made. They do not purport to reflect an entirely logical or philosophical organization of the subject matter of geography. Geographical studies as a whole advance in an inconsistent manner along an irregular front. Pioneers are constantly opening up new realms of investigation that do not fit into preconceived categories. The subdivisions in the classification aim to reflect subjects in which geographers are working or have worked. The general rule has been adopted that, if a publication deals with a region, it is classified under the region,

since regional studies are the distinctive province of geographers. However, material on the history of geography, which forms a somewhat exceptional branch of geographical research, has been included together in one place in Part II even though some of this material might have been listed in Part III under regional headings or under other topical headings in Part II.

BIBLIOGRAPHY

EXPLANATORY NOTES

Order of references under main headings.—The scheme of classification adopted for the bibliography is explained on pp. 14-16, above, and its framework is made clear in the Table of Contents.

Under each main heading in Parts II and III the entries, in so far as they are provided, are normally arranged in this order:

- 1) Bibliographies of books, periodical articles, and the like (often preceded by introductory matter),
- 2) Periodicals and series,
- 3) Bibliographies of maps and atlases; map indexes,
- 4) Atlases.

The principal references of each category are normally arranged in the reverse chronological order of their dates of publication, since the most recent works should ordinarily be consulted first. This rule has not been followed where a different order is more helpful. For example, works dealing with different historical periods are listed chronologically by the periods to which they pertain.

Dashes are used to separate minor categories of references.

References to current periodicals and series precede references to those that have been discontinued. The former are listed in chronological order according to the dates of their first numbers (or those of the first numbers of their earliest direct predecessors, as in the case of the *Geographical Review* [476]). All periodicals and series that were appearing in 1939 and are not definitely known to have been discontinued are regarded, for present purposes, as current. Discontinued periodicals (that is, those either known to have been discontinued or for which there is no record at the American Geographical Society of numbers published since 1938) are listed in inverse chronological order according to the dates of the latest (or latest-known) numbers.

Cross references to the serial numbers of works cited elsewhere in the Bibliography are indicated by figures in square brackets. Cross

references are *not* provided from the sections dealing with smaller subjects to those dealing with the larger subjects of which the smaller subjects form parts—or vice versa. For example, there are no cross references from the section on Venezuela to works listed under "South America" or "The Caribbean Area" that deal with Venezuela among other neighboring countries, nor are there cross references from "South America" to "Venezuela." Hence, in order to make the best use of the Bibliography the reader should not only look up the cross references given in the section covering a topic or area in which he is immediately interested but should also consult the Table of Contents for guidance to other sections that might be pertinent. He should also remember that the most complete or the most recent reference work covering a given subject is not necessarily listed under the sub-heading for that specific subject, as it may frequently be a work that embraces a more comprehensive subject.

Main references.—These are self-explanatory except as follows: Wherever the author of a work is known to be a woman, her first name, if known, is given in full. Initials only are given for the first and middle names of men having three or more names.

Where a work has a title in two languages, both titles are usually given in italics. Translations of certain Russian and other titles, where supplied by the compilers of the present volume, are given in roman type in square brackets.

Periodical titles are given in their most recent forms. Minor divergencies from these forms are in some cases indicated in parentheses within the main title. Other changes in titles are explained in the annotations.

The sponsors of works (see above, p. 35) are named in parentheses after the titles. The publisher of works sponsored by agencies of the United States Government is usually the Government Printing Office.

The number of pages indicated is either the number carrying arabic numerals only or, in most instances, the approximate total of all pages carrying arabic and roman numerals.

Where the date of termination of a publication is not definitely known, the most recent date on record at the American Geographical Society is given in square brackets.

Annotations. The annotations on the bibliographies are descriptive. They present information about (1) subject matter, classification, and arrangement, (2) approximate number of entries (only where the entries are numbered serially), (3) annotations, (4) indexes. They do not seek to appraise the bibliographies in terms of accuracy, completeness, selectivity, and other scholarly qualities. Critical, as distinguished from purely descriptive, comments have not been attempted. Such comments can be written fairly only by one who is thoroughly familiar with the subject that a bibliography covers—indeed only by one who knows the subject even better than does the compiler of the bibliography, and no one could be such an authority on all of the many subjects covered in this book.

The present compilers have resisted the temptation to characterize bibliographies as “important,” “useful,” “valuable,” and so on. These terms are not particularly helpful, since no bibliographies not deemed of some potential value and importance are listed. “Importance” or “utility” are relative matters.

Among the facts that the geographer is likely to wish to ascertain about a bibliography are whether or not it contains references to periodical articles and maps as well as to books, whether or not it contains references to other bibliographies, and whether or not its scope, classification, and arrangement are such as to facilitate its use in geographical studies—particularly in the assembling of references pertaining to particular places and regions. The annotations are designed to shed light on these matters.

Since the great majority of the bibliographies listed were compiled for use as tools of research in geography and related fields, most of them include references to articles in periodicals as well as to books, and this may be assumed, except where the title or annotation indicates specifically that books or periodical articles only are included.

Either a part or the whole of each annotation consists of comment in which certain terms and abbreviations are used as defined below. In this connection, the remarks on classification and arrangement in the Introduction should also be consulted (pp. 29-33, above).

alph.: alphabetical. The abbreviations "alph.," "chron.," and "system." are descriptive of the arrangement (see p. 29) of bibliographies and indexes or parts thereof. Such an abbreviation is placed either (1) in parentheses immediately following the item to which it applies, or (2) where it applies generally to several items, at the beginning (for example, "alph. by topics subcl. by countries" means that the topical headings as well as the subheadings for countries under each topical heading, are arranged in alphabetical order). "alph." is ordinarily omitted where the reference is to an alphabetical index or alphabetical author classification, since the arrangement of indexes and author classifications is normally alphabetical. Where no indication is given of the arrangement of a bibliography (or a part thereof), the arrangement is not deemed of sufficient practical importance to require comment.

ann.: annotated, annotation (where "ann." is omitted annotations are either wholly lacking or scanty).

art.: article, paper, etc., in a periodical or other serial.

auth.: author.

bibl.: bibliography, bibliographical.

by: (see "cl.").

*ca.: circa, approximately.

chron.: chronological, chronologically (see "alph.").

cl.: classified, classification. The nature of a system of classification may be indicated in either of two ways: e.g. "topical cl." or "by topics"; "regional cl." or "by regions"; "place cl." or "by places."

entry: a reference in a bibliography to a particular work.

genl. index: an index in which there are captions for authors, places, and topics (see "place" and "topic").

geog.: geography, geographical (see "place").

geog. names: names of places (see "place").

geog. index: an index pertaining to the subject of geography as such, as distinguished from a place index or index to geog. names (see "place").

hdg.: heading.

incl.: includes, including, among which there will be found.

index: where an annotation contains no reference to an index, it may be

assumed that an index is lacking (see also "alph." and "genl. index").
 natural hist.: natural history. Implies that several subjects such as geology, botany, zoology, and the like are covered.

per.: period (in chronological sense).

period. art.: periodical article.

place: any specific locality, small or large, on the earth's surface, whether in the form of an area or region (q.v.), line (e.g. river, road), or point (e.g. cape, astronomically determined position). In bibliographies and other works the term "geographical" is often used synonymously with place (e.g. geographical classification, geographical index). To avoid confusion with "geographical" in the sense of "pertaining to geography as a subject," the abbreviation "geog." is used in the annotations only where the subject of geography as such is meant, and also in the expression "index to geog. names."

publ.: publication.

ref.: reference.

regional: pertaining to a specific region or group of regions (see "place").

A regional bibliography is one that deals with a particular region; its classification may or may not be regional. For the purposes of this book the term "regional" is applied to tracts of land or water or both, small or large, and not exclusively to regions in the more restricted sense frequently used by geographers and others.

subcl.: subclassified, subclassification.

subhdg.: subheading.

subj.: subject. A matter dealt with in a document. A subject may be either a "place" or a "topic" (q.v.). In the annotations, however, "subj." is used exclusively with reference to classifications in which *both* places and topics are represented.

system.: systematic, systematically. Refers to a logical, as distinguished from an alphabetical or chronological, arrangement of topics (see "alph.," "topic"). Usually omitted, since topical classifications are normally arranged systematically.

topic: any subject other than a specific place (e.g. history, bibliography, mountains). A topical bibliography is one that deals with a particular topic; it may or may not be classified topically. A topical classification is, strictly, a subject classification in which none of the subjects represented are places. In the annotations, however, subject classifications in which there are also a few place subjects are sometimes designated as "topical."

"Alphabetic subject guide to the books needed in libraries for the answering of reference questions frequently asked. . . . Though designed primarily for the librarian, the book should also be helpful to the graduate student and others who like to find their own way among books." Deals for the most part with works in English. All of the main hdgs. (as well as most of the subhdgs.) topical; for a few topics (e.g. statistics) subhdgs. by countries; auth. index.

Besterman, Theodore. *A World Bibliography of Bibliographies*. London, published by the author. Vol. 1, 1939, 611 pp. Vol. 2, 1940, 641 pp. [3]

Lists separately published bibls. and such bibls. published in other books as form "the bulk or at least the principal purpose" of such books. Aims to be impartially international. The approximate number of entries in each work referred to is indicated, but there are no critical anns. Alph. by subjs. (places and topics); under each main topical hdg. a further topical subcl. (e.g.: Geography, (1) Bibliographies and Periodicals, (2) History, (3) General); auth. index. "In the case of bibliographies which refer to both a subject [topic] and a country, preference is given wherever possible to the subject, which is then subdivided by countries." Since there are no cross refs. from countries to the topics under which other bibls. for the same countries are sometimes listed or to lesser places within the countries, and no entries by countries in the index, one can-

not readily compile from this work lists of all of the included bibls. pertaining to particular regions.

General Geographical Bibliographies and Library Catalogues

CURRENT BIBLIOGRAPHIES

In normal times geographical works shortly after they appear are currently recorded in bibliographical guides of two types: (1) comprehensive current bibliographical repertories of geographical literature, usually appearing annually or oftener, and (2) bibliographical notes, book reviews, etc., in the periodicals and yearbooks devoted to geography and allied subjects.

The repertories [6-11] may be regarded as cornerstones of geographical research. They include innumerable references that cannot be found in the retrospective bibliographies. By examining the pertinent parts of them, particularly [6], [7], and [9], the student can often, though not always, gather all the references that he could possibly need. Unfortunately, with one exception [9], publication of the great repertories has been abandoned or postponed on account of the war.

Periodicals bring to the student's attention works that have appeared subsequently to the latest issues of the annual repertories and often give more information about the contents of works than is possible in the brief entries in the latter. Periodicals, however, cannot cover the whole field of geography as comprehensively or as systematically as do the repertories. For certain comprehensive current geographical bibliographies formerly published in geographical periodicals see [476], [625], [691].

Geographisches Jahrbuch

Ed. 1880-1929 by Hermann Wagner (see [59]); 1930-1939 by Ludwig Mecking. Gotha, Justus Perthes. 1866-[1943]. Normally annual (1915-1918 and 1919-1923), each year covered by 1 vol.; 2 vols. annually for certain recent years. [6]

Each vol. contains a series of reports on the status and progress of study in various fields of geog., with abundant refs. to the literature. The same subsj. are not discussed in every vol., but only from time to time, some at intervals of approximately two years, some of three, and others at longer periods. Refs. to the most recent reports are given under the appropriate hdgs. in the present work and also on pp. 273-274, below.

A table of contents of recent back numbers is provided in each vol., enabling the user to find the latest preceding section devoted to any subj. Genl. system. indexes for the series will be found in Vols. 40, 1924-1925, and 52, 1937.

In addition to the reports which have appeared at more or less regular intervals and of which a key is given below, the first 3 vols. contain sections devoted to geog. chronology, geog. statistics (of population and areas), and tables of use to the geographer. All these are indexed (system.) in Vol. 10, 1884, pp. 683-692.

The following key is included here for two reasons: (1) in order to impress upon the reader's mind some conception of the extensive scope and great utility of the *Geographisches Jahrbuch*; (2) to enable him conveniently to lay his hands upon the particular vols. containing material pertinent to the subject in which he may be interested. Having once found the vol. by means of this key, further data in regard to titles, dates covered by each report, and pages upon which the report will be found may readily be determined from the admirably arranged tables of contents (at the beginning of the vol.). Figures in parentheses represent the date of the vol. indicated. The reports referred to usually deal with a period closing a year or more before the date of publication.

In the key topical hdgs. are given in English, the German terms being supplied only where there is any possibility of misunderstanding.

MATHEMATICAL GEOGRAPHY

1. Measurement of terrestrial degree: Vols. 1-10 (1866-84), 13 (1889), 15 (1891), 16 (1893), 18 (1895), 20 (1897), 23 (1900), 25 (1902), 28 (1905), 30 (1907).
2. Methods of geographical surveying: Vols. 22 (1899), 25 (1902).
3. Methods of topographical surveying: Vol. 38 (1915-18).
4. Determination of positions by geographic, geodetic, nautical, and aeronautical means: Vol. 28 (1905); the same, except by geodetic means, 36 (1913).
5. Cartography: Vols. 51-52 (1936-37), 57 (1942); map projections: 9 (1882), 10 (1884), 12 (1888), 14 (1890-91), 17 (1894), 19 (1896), 20 (1897); map projections, map drafting, map measurements: 24 (1901), 26 (1903), 29 (1906), 33 (1910). For published maps see also Nos. 72-74.

PHYSICAL GEOGRAPHY

6. Geophysics and geomorphology (*Geophysik*, the earth as a whole and the earth's surface): Vols. 8 (1880), 9 (1882), 10 (1884), 11 (1887), 13 (1889), 15 (1891), 16 (1893). See also Nos. 7 and 9.
7. Geophysics (*Physik und Mechanik des Erdkörpers*): Vols. 18 (1895), 20 (1897), 23 (1900), 25 (1902), 28 (1905), 30 (1907), 36 (1913), 38 (1915-18), 39 (1919-23), 42 (1927), 52 (1937); terrestrial magnetism: 13 (1889), 15 (1891), 17 (1894), 20 (1897), 23 (1900), 28 (1905), 36 (1913), 40 (1924-25), 44 (1929). See also No. 6.
8. Regional geology (*Neuere Erfahrungen über die geographische Verbreitung geognostischer Formationen*): Vol. 8 (1880); (*Neuere Erfahrungen über den geognostischen Aufbau der Erdoberfläche*): 9 (1882), 11 (1887), 13 (1889), 15 (1891), 16 (1893), 17 (1895), 20 (1897), 22 (1899), 23 (1900), 25 (1902), 27 (1904), 31 (1908), 33 (1910), 35 (1912), 37 (1914).
9. Geomorphology: Vols. 52-53 (1937-38,1); (*Dynamik der festen Erdrinde*): 33 (1910), 35 (1912), 37 (1914), 39 (1919-23), 42 (1927); (*Geophysik der Erdrinde*): 18 (1895), 20 (1897), 23 (1900), 30 (1907); influence of weathering and erosion on land forms: 35 (1912), 37 (1914). See also No. 6.
10. Hydrography of the land (*Gewässerkunde des festen Landes*): Vols. 30 (1907), 45 (1930), 54 (1939,1).
11. Oceanography: Vols. 7 (1878), 9 (1882), 10 (1884), 11 (1887), 13 (1889), 15 (1891), 16 (1893), 18 (1895), 20 (1897), 22 (1899), 24 (1901), 26 (1903), 33 (1910), 38 (1915-18), 40 (1924-25), 43 (1928), 48 (1933), 54 (1939, Pt. 1).
12. Meteorology and climatology: Vols. 4 (1872), 5 (1874), 6 (1876), 7 (1878), 8 (1880), 9 (1882), 10 (1884), 11 (1887), 13 (1889), 15

- (1891), 17 (1894), 21 (1898), 24 (1901), 26 (1903), 29 (1906), 33 (1910), 36 (1913), 39 (1919-23), 41 (1926), 42 (1927), 44 (1929).
13. Plant geography: Vols. 1 (1866), 2 (1868), 3 (1870), 4 (1872), 5 (1874), 6 (1876), 7 (1878), 8 (1880), 9 (1882), 10 (1884), 11 (1887), 13 (1889), 15 (1891), 16 (1893), 19 (1896), 21 (1898), 24 (1901), 28 (1905), 33 (1910), 36 (1913), 38 (1915-18), 40 (1924-25), 42 (1927), 51 (1936).
14. Soils: Vol. 54 (1939, 1).
15. Animal geography: Vols. 1 (1866), 2 (1868), 3 (1870), 4 (1872), 5 (1874), 6 (1876), 7 (1878), 8 (1880), 9 (1882), 10 (1884), 11 (1887), 13 (1889), 22 (1899), 24 (1901), 26 (1903), 31 (1908), 45 (1930), 53 (1938, Pt. 2).

HUMAN GEOGRAPHY

16. Ethnography and anthropology: Vols. 2 (1868), 3 (1870), 4 (1872), 5 (1874), 6 (1876), 7 (1878), 8 (1880), 9 (1882), 10 (1884), 11 (1887), 13 (1889), 15 (1891), 17 (1894), 19 (1896), 21 (1898), 24 (1901), 28 (1905), 31 (1908), 34 (1911), 47 (1932), 48 (1933).
17. Anthropogeography: Vols. 26 (1903), 31 (1908), 32 (1909).
18. Political geography and geopolitics: Vol. 49 (1934).
19. Economic and commercial geography: Vols. 50-51 (1935-36).
- 19a. Geography of Settlements and population: Vol. 55 (1940).

HISTORICAL GEOGRAPHY (INCLUDING HISTORY OF GEOGRAPHY)

20. Historical geography in general, including history of geography: Vols. 3 (1870), 4 (1872); history of geography, Vol. 55 (1940).
21. The ancient Greek world, including history of geography: Vols. 12 (1888), 14 (1890-91); southeastern Europe: 43 (1928).
22. The ancient world (especially Africa, Asia, Asia Minor), including history of geography: Vols. 19 (1896), 22 (1899), 28 (1905), 50 (1935).
23. The ancient Orient: Vols. 34 (1911), 43 (1928), 47 (1932); north-east Africa: 53 (1938, Pt. 1).
24. The Roman West: Vols. 34 (1911), 39 (1919-23).
25. Topography of the city of Rome: Vol. 34 (1911).
26. History of geography from the Middle Ages on: Vols. 18 (1895), 20 (1897), 23 (1900), 26 (1903), 30 (1907), 41 (1926).
27. History of cartography: Vol. 17 (1894).

EDUCATIONAL GEOGRAPHY AND METHODOLOGY

28. Methodology: Vols. 7 (1878), 8 (1880), 9 (1882), 10 (1884), 12 (1888), 14 (1890-91).

GEOGRAPHICAL CHAIRS IN UNIVERSITIES, etc.

29. Geographical chairs in universities, etc., of Europe: Vols. 8 (1880), 9 (1882), 10 (1884), 12 (1888), 14 (1890-91), 19 (1896); geographical chairs in universities, etc., of Europe and of other parts of the world: 24 (1901), 28 (1905), 32 (1909).

GEOGRAPHICAL SOCIETIES AND PUBLICATIONS

30. Geographical societies and publications: Vols. 1 (1866), 2 (1868), 3 (1870), 4 (1872), 5 (1874), 6 (1876), 7 (1878), 8 (1880), 9 (1882), 10 (1884), 12 (1888), 14 (1890-91), 19 (1896), 24 (1901), 32 (1909).

GEOGRAPHICAL NAMES

31. Geographical names: Vols. 9 (1882), 10 (1884), 12 (1888), 14 (1890-91), 16 (1893), 18 (1895), 27 (1904), 29 (1906), 34 (1911).

GEOGRAPHICAL NECROLOGY

32. Geographical necrology: Vols. 12 (1888), 14 (1890-91), 16 (1893), 19 (1896), 20 (1897), 22 (1899), 24 (1901), 26 (1903).

SCIENTIFIC JOURNEYS AND EXPLORING EXPEDITIONS

33. Scientific journeys and exploring expeditions: Vols. 1-6 (1866-76). For later period, see below, under Regional Geography.

REGIONAL GEOGRAPHY

34. North America: Vols. 12 (1888), 14 (1890-91), 16 (1893), 18 (1895), 20 (1897), 22 (1899), 25 (1902), 27 (1904), 32 (1909), 37 (1914), 45-46 (1930-31), 58 (1943); Canada, 56 (1941).
35. Latin America: Vols. 12 (1888), 14 (1890-91), 16 (1893), 18 (1895), 20 (1897), 22 (1899), 25 (1902), 27 (1904), 30 (1907), 36 (1913), 41 (1926); South America: 54-56 (1939-1941).
36. British Isles: Vols. 17 (1894), 19 (1896), 26 (1903), 29 (1906), 32 (1909), 35 (1912), 41 (1926), 50 (1935).

60. Russia in Europe: Vols. 17 (1894), 29 (1906), 35 (1912), 38 (1915-18), 43 (1928).
61. Africa: Vols. 9 (1882), 10 (1884), 12 (1888), 14 (1890-91), 16 (1893), 18 (1895), 20 (1897), 22 (1899), 25 (1902), 27 (1904), 30 (1907), 32 (1909), 36 (1913), 39 (1919-23), 43 (1928).
62. Asia: Vols. 9 (1882), 10 (1884), 12 (1888), 14 (1890-91), 16 (1893), 18 (1895).
63. Asia, without Russian Asia: Vols. 20 (1897), 22 (1899), 25 (1902), 32 (1909), 37 (1914), 42 (1927), 43 (1928), 47 (1932), 52 (1937).
64. Russian Asia: Vols. 27 (1904), 37 (1914), 41 (1926), 53 (1938, Pt. 2), 54 (1939, Pts. 1, 2).
65. Western Asia: Vol. 47 (1932).
66. Eastern Asia: Vols. 42 (1927), 53 (1938, Pt. 1).
67. India: Vol. 42 (1927).
68. Southeastern Asia and Indonesia: Vol. 42 (1927), 57 (1942).
69. Japan: Vols. 43 (1928), 54 (1939, Pt. 2).
70. Australia and Oceania: Vols. 10 (1884), 14 (1890-91), 16 (1893), 18 (1895), 20 (1897), 22 (1899), 25 (1902), 27 (1904), 30 (1907), 32 (1909), 42 (1927), 53 (1938, Pt. 2).
71. Polar regions: Vols. 9 (1882), 10 (1884), 14 (1890-91), 18 (1895), 21 (1898), 27 (1904), 32 (1909), 36 (1913); north polar regions: 44 (1929), 47 (1932); south polar regions: 48 (1933).
72. General review: Vol. 1 (1866).

TOPOGRAPHIC MAPS (see also No. 5)

73. Topographic maps: Vol. 40 (1924-25); Europe: 1 (1866), 4 (1872), 12 (1888), 14 (1890-91).
74. Key maps of the more important topographic maps of Europe and other regions: Vols. 12 (1888), 14 (1890-91), 17 (1894), 19 (1896), 21 (1898), 23 (1900), 25 (1902), 29 (1906), 32 (1909).

Bibliographie géographique internationale

Paris, published for Association de Géographes Français by Armand Colin. 1891-. Normally annual. First 2 issues appeared in *Annales de géographie* [694], 1891-1892, 1892-1893; Nos. 3-24, 1893-1914 (entitled successively *Bibliographie de l'année . . .*, *Bibliographie annuelle*, and *Bibliographie géographique annuelle*), issued as separate numbers of the *Annales de géographie*; Nos. 25-49, 1915-1939, issued under the direction of Elieco Colin; Nos. 25-29, 1915-1931, entitled *Bibliographie géographique*; Nos. 30-49, 1931-1939, with present title. Publication is to be resumed. [7]

The most convenient, comprehensive, and in many respects the best of all current geog. bibls. Lists titles of books, period. arts., and maps that have appeared during the year. Divided into 2 parts, general and regional. The general part includes sections on the history of geog., mathematical geog. and cartography, physical geog. (*géographie naturelle*) (with subdivisions dealing with geophysics, geology, geomorphology, meteorology and climatology, hydrography, oceanography, and biogeography), and human geog., including anthropology, political geog., economic geog., and colonization. The material included (in most recent numbers, usually between 2800-2900 items a year) is critically selected and to most of the items brief signed critiques are appended. Auth. index.

After 1923, when the coöperation of the American Geographical Society was first secured, the list of foreign collaborating institutions grew, so that at the time of suspension of publ. it included the American Geographical Society, Comitato Geografico Nazionale Italiano, Deutscher Geographentag, Royal Geographical Society (London), Société Belge d'Études Géographiques, and Société Royale de Géographie d'Égypte.

In order to bring together conveniently the material in the *Bibliographie géographique* bearing on related subs., the American Geographical Society has cut apart and reassembled Nos. 33-48 (1923-1938) and bound them in 21 vols. devoted each to a particular topic or region, making in effect a cl. retrospective bibl. of geog. for the sixteen years covered.

Recent Geographical Literature, Maps, and Photographs Added to the Society's Collections: Supplement to the Geographical Journal.

London, Royal Geog. Soc. 1918-1940. Irregularly (usually 4 numbers a year). Index: Vols. 1-4, 1918-1932, published in 1936. [8] Succeeds lists published prior to 1918 in *Geog. Journ.* [625]. By regions, with a genl. section and a section for new maps and new photographs; ca. 500 entries per issue. Lack of auth. index is a drawback.

Current Geographical Publications: Additions to the Research Catalogue of the American Geographical Society

New York, Amer. Geog. Soc., 1938-. Monthly (except July and August). Mimeographed. [9]

Covers books, maps, and period. arts. currently acquired by the American Geographical Society. Each issue, which contains some 600 refs., includes a section on genl. works, cl. by topics and arranged system., followed by a section on regional works cl. and arranged by regions; no anns.; topical index (system.); auth. index. Since October, 1940, this work has been accompanied by a photograph supplement.

Bibliotheca Geographica: Jahresbibliographie der geographischen Literatur

Gesellschaft für Erdkunde zu Berlin. 1895-1917 (the first 18 volumes cover the period from 1891 to 1910; the last (Vol. 19), covering 1911-1912, was published in 1917). [10]

Superseded annual summaries of geog. literature published in the *Zeitschrift* of the Berlin Geographical Society [716] during the period 1853 to 1890. While of exceptional value because of the number of items listed, no critical notes are included. Primarily by regions with a genl. topical section; auth. index.

Petermanns geographische Mitteilungen

[11]

The sections devoted to geog. literature and especially to maps in *Petermanns Mitteilungen* [717], particularly during the period before the Second World War, were of exceptional value as a bibl. tool. The bibls. are especially strong for current German material.

RETROSPECTIVE BIBLIOGRAPHIES AND PUBLISHED LIBRARY CATALOGUES

Survey of general works of a geographical nature, bibliographies, periodicals, reports of progress in research, encyclopedias and dic-

tionaries, general and regional manuals, works on maps and atlases, etc.: Wagner [60], 1938, pp. 1-27, 61-64.—See also [1156]. [12]

Migliorini, Elio. *Guida bibliografica allo studio della geografia*. Naples, Pironti, 1945. 265 pp. (*Guide bibliografiche Pironti*, No. 1.) [13]

A work somewhat comparable to the present volume, in which relatively more attention is given to the critical discussion of various manuals of genl. and systematic geog. and less to genl. non-geog. aids, geog. bibls. and periodicals. Deals primarily with works in western European languages that have appeared during the past quarter century. Chaps. 1-10: refs. followed by running discussions of geog. bibls., periodicals, manuals, world atlases, world maps, dictionaries, statistical annuals, etc.; Chap. 11: unannotated refs. to regional studies. Does not cover hist. geog. or hist. of geog. and exploration. 938 entries.

A short art. with ann. refs. covering outstanding bibl. aids, geog. periods., maps, atlases, gazetteers, and regional geographies.

Hassert, Kurt. *Einführung in die geographische Literatur: Ein Wegweiser für Anfänger*. Dresden, Zahn und Jaensch, 1932. 89 pp. (*Dresdner geographische Studien* [753], No. 3.) [15]

Bibl. aids, geog. periods., gazetteers, lexicons, statistical publs., textbooks, and compendiums are evaluated, but there are no suggestions for regional material or for cartography and atlases. A serviceable introduction to German material within these limits.

Dinse, Paul. *Katalog der Bibliothek der Gesellschaft für Erdkunde zu Berlin*. Berlin, Mittler, 1903. 952 pp. [16]

Covers books, separates, important component parts of larger works, and important period. arts., but not maps. Certain works dealing with more than one subj. are listed in different places. Contains a list of periodicals and an appendix on linguistic works and various nongeog. aids to geog. research. Main catalogue divided in two parts: (1) genl. geog. literature, cl. by topics, incl. bibls., hist. of geog. and discovery, hist. of cartography, methodology, encyclopedic works, series, physical geog., biogeog., anthropogeog., historical geog., geog. names and transcription; (2) literature of particular regions and seas, cl. by regions; auth. index.

The principle of cl. adapted for this great catalogue provided the model for the cl. of the materials in the record section of the *Geog.*

Review [476], in the Research Catalogue of the American Geographical Society [20], and in the present vol.

Mill, H. R. *Catalogue of the Library of the Royal Geographical Society*. London, Murray, 1895. 841 pp. [17]

Somewhat less serviceable than Dinse [16], 1903, because cl. is alph. by auths. and there is no subj. index. Does not cover period. arts. or maps. Three appendixes contain lists of "Collections of Voyages and Travels," of "Government, Anonymous, and Other Miscellaneous Publications" (place cl.), and of periodicals. In 1871 the Society published a *Classified Catalogue of the Library of the Royal Geographical Society* (478 pp.) (alph. by regions). On this and earlier catalogues of the Royal Geographical Society collections, see the preface to the catalogue of 1895. See also [21].

Cardon, F. *Pubblicazioni geografiche stampate in Italia fra il 1800 e il 1890: saggio di catalogo . . . pubblicato in occasione del Primo Congresso Geografico Italiano (Genova, 1892)*. (Società Geografica Italiana.) Rome, 1892. 330 pp. [18]

Koner, Wilhelm. *Repertorium über die vom Jahre 1800 bis zum Jahre 1850 in akademischen Abhandlungen, Gesellschaftsschriften, und wissenschaftlichen Journalen auf dem Gebiete der Geographie, Reisen, Ethnographie und Statistik erschienenen Aufsätze*. Berlin, 1854. 308 pp. (Koner's *Repertorium auf dem Gebiete der Geschichte und ihrer Hilfswissenschaften*, Vol. 2, Pt. 2.) [19]

Comprehensive guide to geog. periods. of the first half of the 19th century.

CARD CATALOGUES OF LARGE GEOGRAPHICAL LIBRARIES

American Geographical Society Library [20]

The following card catalogues are maintained: (1) a dictionary catalogue covering all books and a selection of outstanding period. arts.; (2) a dictionary catalogue of maps (see [106]); (3) a checklist of periodicals (by countries and cities); (4) "Research Catalogue," covering material received since 1923 (see [9, 16]). The last is system. arranged and divided into two main parts: (a) "general," covering nonregional material, cl. by topics; and (b) "regional," covering regional material, cl. by regions and subcl. by topics within each region. There are also an auth. index providing refs. to the cards in the 2 main parts of the Research Catalogue, a topical index (system.) providing

refs. to the cards in the regional part, and an alph. key to the topical hdgs. The Society's collections of photographs, lantern slides, and newspaper clippings are arranged as in the Research Catalogue. The Society's system of cl. as employed in the Research Catalogue, with modifications and improvements, is explained by S. W. Boggs, "Library Classification and Cataloging of Geographic Material," *Annals Assn. of Amer. Geogs.* [479], 27 (1937), 49-93. See also *Geog. Rev.* [476], 27 (1937), 688-689.

BIBLIOGRAPHIES OF WORKS FOR TEACHERS OF GEOGRAPHY

(For works on geographical education see [187-189].)

Illinois Bulletin of Geography, issued in mimeographed form by the Illinois Chapter of the National Council of Geography Teachers, contains (Vol. 7, No. 4, May, 1945) a brief "Bibliography of High School Geography" (9 pp.).—On certain recent American college textbooks in geography: reviews by E. G. R. Taylor (*Geog. Rev.* [476], 27 (1937), 129-135) and J. O. M. Broek (*ibid.*, 31 (1941), 663-674; in form of a dialogue). [22]

Jensen, J. G., and Marion I. Wright. *Bibliography of the Best References for the Study of Geography*. (Rhode Island College of Education.) Providence, R.I., 1945. 31 mimeo. pp. [23]

Designed especially for "our students, our associates in the public schools, and other adults wishing to develop understanding and knowledge of geography." By topics and regions; ann.

[Clark University: School of Geography.] *Bibliography of Textbooks and Reference Books on Geography*. [Worcester, Mass., 1939?] 6 pts. Unnumbered mimeo. pages. [24]

The 6 parts cover works: (1) for elementary and junior high schools; (2) for senior high schools; (3) for teachers' colleges, liberal arts colleges, universities, and graduate schools; (4) on the teaching of geog.; (5) for use in adult education; and (6) in magazines and periodicals. See also *Supplementary Readings in Geography for Elementary and Secondary Schools*, Clark University, April, 1939. In 2 parts, for Grades 1-2 and 2-3 respectively.

Wright, Grace S. *Government Publications of Use to Teachers of Geography and Science*. Washington, 1938. 16 pp. (U.S. Office of Education, Leaflet No. 31.) [25]

Alph. by places and topics.

Geographical Books: A Bibliographical List of University and School Text and Reference Books Prepared for the Use of Teachers and Students. Cambridge, England, Heffer, 1934. 86 pp. [26]

A selection showing "considerable knowledge and judgment" (*Geography* [629], 19 (1934), 79).

Forsaith, D. M. *A Handbook for Geography Teachers*. London, Methuen, 1932. 348 pp. (*Goldsmith's College Handbooks for Teachers*, No. 2.) [27]

Although "concerned with the teaching of geography to children under fifteen," contains a wealth of refs. of value to mature students. No index. Consists in the main of ann. bibls. Six main parts: (1) syllabuses and schemes of work; (2) indoor geog.—the geog. room (globes, maps, pictures, lantern slides, etc.); (3) outdoor geog.; (4) book lists (by areas and topics, incl. the various branches of geog., map reading and map making, atlases, periodicals, geog. in literature, etc.); (5) the teaching of international geog.; (6) geog. and the League of Nations.

Booth, Mary J. *Material on Geography, Including Commercial Products, Industries, Transportation and Educational Exhibits Which May Be Obtained Free or at Small Cost*. 5th rev. ed. Charleston, Ill., 1931. 108 pp. [28]

Main list alph. by places and topics.

Mill, H. R. *Guide to Geographical Books and Appliances: The Second Edition of "Hints to Teachers and Students on the Choice of Geographical Books for Reference and Reading."* London, Philip, 1910. 215 pp. [29]

The object of this work, as stated in the preface of the first edition, 1897, was "to place before teachers and students a selection of the best available books on geography as an educational subject, and on different parts of the world." Cl. by places and topics.

BOOKS OF TRAVEL, FICTION, DISSERTATIONS

On bibliographical sources for geographical fiction: note in *Geog. Rev.* [476], 28 (1938), 499-501 [30]

Holmes, U. T., Jr. *Books of Travel*. Rev. ed. 1931. 54 pp. (*Univ. of North Carolina Extension Bull.*, Vol. 10, No. 10.) [31]

Brief selective lists of popular books of travel in English with reviews of some of the more outstanding among them. Place cl.

Wharton, Miss D. *Short List of Novels and Literary Works of Geographic Interest*. Prepared by the Leeds Branch of the Geographical Association, with the coöperation of the other Yorkshire branches. Aberystwyth, n.d., [1921?]. 22 pp. [32]

Lists of dissertations in geography accepted by universities in the United States for the degree of Ph.D. will be found in *Annals Assn. Amer. Geogs.* [479], 25 (1935), 211-237, and 36 (1946), 215-247. See also p. 35, n. 34, above. [33]

GEOGRAPHICAL INSTITUTIONS

GEOGRAPHICAL CONGRESSES

International geographical congresses are listed below. For reports on national geographical congresses or their equivalents held in France, Germany, and Italy see [690], [715], and [840].

International Geographical Congresses [34]

Each report has been edited in the country in which the congress was held and in the language of that country. Individual monographs in each report are in various languages. The following list shows places and dates of the congresses and in parentheses the dates of publ. of the reports (also place of publ. where not the same as that of a congress). See also above, p. 19, n. 10.

First, Antwerp, 1871 (1872); Second, Paris, 1875 (1878); Third, Venice, 1881 (Rome, 1882); Fourth, Paris, 1889 (1890); Fifth, Berne, 1891 (1892); Sixth, London, 1895 (1896); Seventh, Berlin, 1899 (1901); Eighth, in the United States, 1904 (Washington, 1905); Ninth, Geneva, 1908 (1909); Tenth, Rome, 1913 (1915); Eleventh, Cairo, 1925; Twelfth, Cambridge, 1928; Thirteenth, Paris, 1931; Fourteenth, Warsaw, 1934; Fifteenth, Amsterdam, 1938.

GEOGRAPHICAL SOCIETIES, UNIVERSITY DEPARTMENTS, INSTITUTES, AND ASSOCIATIONS

Many of the geographical societies of the world are semiscientific, semisocial organizations whose membership consists primarily of

persons interested in travel and geography—merchants, professional men, teachers, government officials, army and navy officers, etc., living in or near a particular city. These societies may be called centralized. Lectures are held, rooms and sometimes a building containing a library and map collection are often maintained, and a periodical is usually published. A few of the larger societies, however, originated as, or have developed into, national institutions, possessing large libraries and employing professional staffs engaged in geographical work—notably the Royal Geographical Society (London), the American Geographical Society (New York), the National Geographic Society (Washington).

Another type of centralized geographical organization is the university or college department of geography. As a very rough indication of the stronger departments, the following list shows the colleges and universities in the United States having two or more members of the Association of American Geographers on their faculties (June, 1945) (see also below, p. 277): Carleton Coll. (2); Clark Univ. (3); Columbia Univ. (5); Harvard Univ. (10); Indiana Univ. (3); Northwestern Univ. (3); Ohio State Univ. (8); Stanford Univ. (2); Syracuse Univ. (3); Univ. of California (8); Univ. of Chicago (7); Univ. of Cincinnati (3); Univ. of Maryland (2); Univ. of Michigan (6); Univ. of Minnesota (3); Univ. of Missouri (2); Univ. of Pennsylvania (3); Univ. of Washington (Seattle) (2); Univ. of Wisconsin (5).

Associated with certain university departments, or sometimes more or less independently established by an individual professor, are geographical institutes. These are more common in continental Europe than in the United States. Many of them issue series or serial publications.

As distinguished from these centralized organizations there are certain decentralized associations of professional geographers and teachers of geography, such as the Association of American Geographers, Association de Géographes Français, Geographical Association (Great Britain), National Council of Geography Teachers (U.S.), and the newly organized American Society for Professional Geographers. Most of these are national in scope; they hold meetings in different places and publish periodicals of a more specialized type than those of the majority of the centralized geographical societies.

Short reports on the annual meetings of the Association of American Geographers, often with brief summaries of papers read, have been published in the April number of the *Geographical Review* [476] each year. Abstracts of the papers are published in the *Annals of the Association of American Geographers* [479].

Yet another type of geographical organization is the section or division devoted to geography of a large scientific body, such as the Section E, Geology and Geography, of the American Association for the Advancement of Science, the Division of Geology and Geography of the National Research Council (U.S.), and Section E, Geography, of the British Association for the Advancement of Science.

For data on these various organizations see *Minerva* and *Index Generalis* (notes 7, 8, on pp. 18, 19 above), *Geographen Kalender* [725]; also [6, Nos. 29, 30], [36, 106] and references to the serial publications of geographical societies in Part III below. [35]

Spañ, Enrique. "Cronología, diferenciación, número de socios y distribución de las sociedades de geografía," *Boletín de la Academia Nacional de Ciencias*, Córdoba, Argentina, 32 (1935), 323-336. [36] Statistical information largely from *Minerva*, Vol. 30, 1930; Vol. 31, 1933, and *Index Generalis*, 1933 (see above p. 18). Accompanied by 3 sketch maps showing distribution of geog. societies.

GEOGRAPHICAL LIBRARIES AND MUSEUMS

(See also above, pp. 22-26.)

According to the survey recently made by the American Library Association (see above, p. 23, note 20) the following American libraries contain important collections of geographical publications (see also below, p. 276):

University libraries: California (Latin America, Pacific countries); Chicago (United States, Europe, Latin America, East Asia, India); Clark; Columbia; Harvard; Louisiana; Michigan (United States, Latin America, East Asia); Texas (Latin America); Washington at Seattle (Northwest); Yale. *Public library:* New York (historical, relating to America). *Other libraries:* American Geographical Society; Explorers' Club; Library of Congress; National Geographic Society; Pan American Union (Latin America); United States Department of Commerce. See also E. T. Platt, "Books and

National Defense: A Brief Survey of Some Library Resources of Geographical Pertinence," *Geog. Rev.* [476] 31 (1941), 264-271. [37]

According to Sparr [36], 1935, p. 335, in the early 1930's there were 21 geographical societies in the world with libraries containing more than 20,000 volumes each, as follows: Paris (300,000 vols.); Russian State (formerly Imperial) (180,000); American (N.Y.) (97,500); Royal (London) (80,000); Berlin (60,000); Italian (Rome) (60,000); Vienna (50,000); Far East (Khabarovsk) (50,000); Lisbon (40,000); Madrid (35,000); Brisbane (30,000); Vladivostok (26,500); Marseille (25,000); Nancy (25,000); Tashkent (23,000); Edinburgh (22,000); Dresden, Leipzig, Paris - (Géogr. Commerciale), 20,000 each. The geographical societies having the largest map collections were London (170,000 maps); American (N.Y.) (85,700); Paris (60,000); Berlin (20,000). These figures, derived from reports made by the societies themselves to *Minerva* and *Index Generalis*, are unreliable and may not be comparable but are the only data available.

On Jan. 1, 1946, the Library of the American Geographical Society contained approximately 116,600 volumes of books and periodicals; 23,000 pamphlets; 133,400 maps; 2,300 atlases (*Geog. Rev.* [476], 36 (1946), 317). [38]

GEOGRAPHICAL PERIODICALS AND SERIES

GEOGRAPHICAL PERIODICALS

The scientific and scholarly quality of geographical periodicals (the term "periodical" should be understood as embracing also society transactions, etc.) varies widely. Some are critical instruments of research, including articles, maps, bibliographies, and book reviews of merit and dealing with subjects of world-wide scope. Others of

equally high quality specialize in a particular region or group of topics. Still others, though their nominal aim is to treat the geography of the world as a whole, are of little significance except for the special data they may furnish regarding their respective regions (see p. 40). Finally there are not a few so-called geographical periodicals so given over to antiquarian and historical studies or to the "travelogue" type of article as to be of little or no use to the professional geographer.

The great majority of geographical periodicals are issued by geographical institutions of the types indicated in [35]. A few, including some of the more scholarly as well as the more popular, are or have been published by commercial houses. Many of the older geographical-society periodicals present little more than the transactions of meetings, texts of the lectures, and occasional independent papers. During the nineteenth century their pages were often filled largely with data on current explorations. With the growth of geography as a profession a new type of periodical made its appearance, in which attention was focused on the scientific, academic, or educational phases of the subject. Most of the serial publications of geographical institutes connected with universities are of this type, and, in addition, in nearly every large country one or more strictly professional periodicals, national or even international in the scope of their contributors, made their appearance between 1890 and 1920, paralleling the periodicals of the nation-wide geographical societies. Thus we have in France the newer *Annales de géographie* [694] established in 1891 and the older *Bulletin* of the Paris Geographical Society [691] dating from 1822; in Italy the *Rivista geografica italiana* [843], 1894-, and the *Bolletino* of the Italian Geographical Society [841], 1868-; in Russia *Zemlevedenie* [897], 1894-, and the journals of the Russian Geographical Society [895], 1865-; in Germany *Geographische Zeitschrift* [719], 1895-, and the *Zeitschrift* of the Berlin Geographical Society [716], 1839-; in Great Britain *Geography* (formerly the *Geographical Teacher*) [629], 1901-, and the *Journal of the Royal Geographical Society* [625], 1830-; and in the United States the *Annals of the Association of American Geographers* [479], 1911-, and the *Bulletin of the American Geographical Society* [476], 1852-. In all of these instances the new professional periodical was issued apart from the national geographical societies, either as a more or less independent venture

(e.g., *Geographische Zeitschrift* and *Zemlevedenie*) or by a nation-wide association of professional geographers. In Sweden and the United States, however, geographical societies have taken the initiative in producing professional journals. *Geografiska Annaler* [648] was established in 1919 by the Swedish Society for Anthropology and Geography as an international organ of scientific geography along with the same society's older journal [647], 1881-, and the *Geographical Review* [476] superseded the *Bulletin* as the organ of the American Geographical Society in 1916. It should be noted that many of the journals of nation-wide geographical societies, though less strictly professional than the newer periodicals, nevertheless contain material of the highest scientific and scholarly quality. This is notably true of the *Geographical Journal*, the *Zeitschrift* of the Berlin, the *Известия* of the Russian, and the *Bolletino* of the Italian geographical societies. A few geographical societies issue illustrated popular magazines (one of which, the *National Geographic Magazine* [477], has an extremely wide circulation), though other magazines of this type (e.g., [630], [651], [682]) are due to the enterprise of commercial publishers. On the other hand one commercially published geographical periodical, *Petermanns Mitteilungen* [717], long stood in the first rank among the scholarly instruments of geographical research.

It should be noted that the sixteen titles given in the preceding paragraph are those of the world's outstanding geographical periodicals of broad scope.

Most of the periodicals listed in this volume are geographical either in the strict sense of the term (see p. 30) or at least are nominally so. Probably the majority, though by no means all, of the periodicals of geographical societies and geographical institutes are included as well as many others which contain the word "geographical" in their titles. A few nonregional periodicals devoted to special branches of geography are listed in Part II; general and regional geographical periodicals and a few other regional periodicals that deal with large regions as a whole are listed in Part III. Only such nongeographical periodicals are listed (e.g., historical, ethnographic) as contain notable material of geographical value.

In order to find geographical literature in the periodicals of the first half of the 19th century the reader should make use of Koner [19], 1854. During the period since 1850 the number of periodicals has

grown so great that the compilation of another work like that of Koner has never been attempted. To find geographical material in the serials of the last ninety-five years we must look to the retrospective and current bibliographies that contain references to periodical articles (see above, pp. 51-60).

Among American libraries especially strong in their collections of geographical periodicals, that of the American Geographical Society probably ranks first.

In *Geographen-Kalender* [725], 1914, pp. 353-414, may be found an alphabetical list of periodicals dealing with geography and related sciences. Here and on pp. 69-350 under the name of the publishing institution, data are given regarding editors, frequency of publication, and date when publication was begun. A list, arranged regionally, of specifically geographical periodicals is included in *Geographisches Jahrbuch* [6], 1909, pp. 419-429. See also Wagner [60], 1938, pp. 6-8. [41]

On indexes to *Geographical Journal* [625], *Petermanns Mitteilungen* [717], *Scottish Geographical Magazine* [626], *Geographical Review* [476], *National Geographical Magazine* [477]: note in *Geog. Rev.* [476], 27 (1937), 336-337. [42]

GEOGRAPHICAL SERIES

The following references cover a selection only of the more important general geographical series. Others are listed in Part III under the countries in which they are published.

SERIES PUBLISHED BY GEOGRAPHICAL SOCIETIES AND OTHER SCIENTIFIC INSTITUTIONS

Royal Geographical Society, London. (a) *Supplementary Papers*. 1886-1893 4 vols. (b) *Technical Series*. 1920-[1933]. Nos. 1-[5]. [43]

(a) consists of papers "too long or too technical for inclusion in the monthly publication" of the Society. (b) deals primarily with surveying and map making. The Society has also published several bibls., maps, monographs, and educational works that do not form parts of specific series. See H. R. Mill, *The Record of the Royal Geographical Society, 1830-1930*, London, Royal Geog. Soc., 1930.

University of California Publications in Geography. 9 vols. 1913-
[1944]. [44]

Each vol. includes monographs numbered serially.

American Geographical Society, New York. (a) *Special Publications*. 1915-[1945]. Nos. 1-[29]. (b) *Research Series*. 1922-[1947]. Nos. 1-[22]. [45]

These 2 series are essentially similar in nature, (a) being issued in a larger format than (b) to permit the adequate reproduction of maps and photographs. Both series comprise for the most part monographs presenting the results of original research. The numbers are bound volumes except for 2 slip cases each containing pamphlets and maps in (a) and 5 pamphlets in (b).

The Society also publishes other series of more limited scope. See *American Geographical Society: Books and Maps* [1946], a leaflet in which the publs. of the Society are listed.

National Geographic Society, Washington. *Technical Papers*, constituting 4 series: *Katmai Ser.*, 2 vols., 1923-1924; *Pueblo Bonito Ser.*, No. 1, 1935; *Stratosphere Ser.*, Nos. 1, 2, 1935-1936; *Solar Eclipse Ser.*, Nos. 1, 2, 1939-1942. [46]

SERIES PUBLISHED BY COMMERCIAL PUBLISHERS

British

(a) *The Regions of the World*, ed. by H. J. Mackinder. Clarendon Press, Oxford Univ. Press (published in United States as *Appleton's World Series*). 6 vols., including such classics in regional geography as Mackinder's *Britain and the British Seas*, 1902, and D. G. Hogarth's *The Nearer East*, 1902. (b) *Cambridge Geographical Series*. London. 6 vols. (c) *Methuen's Advanced Geographies*, London (published in the United States by E. P. Dutton without series title). Some 10 recent works on regional geography. (d) *Harrap's New Geographical Series*, London. Several advanced textbooks and manuals of systematic and regional geography. [47]

French

(a) *Collection Armand Colin: Section de géographie*. Paris. (b) *Géographie pour tous*. Paris, A. Fayard & Cie. (c) *Géographie humaine: Collection dirigée par Pierre Deffontaines*. Paris, Gallimard. [48]

German

The following series of small volumes contain works by leading authorities on divers aspects of geography and nearly all parts of the world: *Aus Natur und Geisteswelt*, Berlin, Teubner; *Sammlung Göschen*, Berlin and Leipzig, Walter de Gruyter; *Jedermanns Bücherei: Abteilung Erdkunde*, Breslau, Ferdinand Hirt; *Perthes Kleine Völker- und Länderkunde zum Gebrauch im praktischen Leben*, Gotha and Stuttgart, F. A. Perthes. [49]

GENERAL GEOGRAPHICAL MANUALS

In this section references are given to a selection of works which the geographical student may profitably consult in order to obtain a broad initial orientation before undertaking more detailed investigation of almost any geographical topic or region. For additional titles see Wagner [60], 1938, pp. 10-14, and Migliorini [13], 1945, pp. 58-73.

For guidance to sources of statistical information, see the references on p. 38, note 45, above. Especially well conceived and arranged are the geographical statistical tables in the *Encyclopædia Britannica World Atlas* [116], "Geographical Summaries."

During both the First and Second World Wars comprehensive regional studies were made of large parts of the world for intelligence purposes by various branches of the governments and armed forces of the belligerent nations. Geographers collaborated in this work and the various volumes that resulted constitute an important source of geographical information. After the First World War the Geographical Section of the Naval Intelligence Division of the British Admiralty and the Historical Section of the British Foreign Office brought out a series of *Manuals* and *Handbooks*, respectively, on the geography and political and economic conditions of most parts of the world. A comparable series of *Notices* was issued by the French Service Géographique de l'Armée. During the Second World War the Military Government Division of the United States War Department prepared a series of *Civil Affairs Handbooks* in about 180 parts. These have been published as *Army Service Forces Manuals* 350-370 and have been distributed to certain American libraries. They "cover the Axis countries and those occupied by

them, presenting a wide range of data about the economic, cultural, and political organization of the various countries. The sections and atlases for the cultural institutions should be noted with particular interest." (*Library Journ.*, 71 (1946), 481). Among similar series that have not as yet been "declassified" but which may ultimately be made available to the public are: (1) the *Joint Army Navy Intelligence Studies* (JANIS) dealing primarily with the Far East; (2) the British *Inter-Service Intelligence Studies* (ISIS) prepared at Oxford, England, and covering more particularly Europe and Africa; and (3) the *Handbooks* prepared by the British Division of Naval Intelligence. [50]

On a selection of German geographical works of comprehensive scope: note in *Geog. Rev.* [476], 24 (1934), 674-676. [51]

COLLABORATIVE WORKS

Géographie universelle. Publiée sous la direction de P. Vidal de la Blache et L. Gallois. 15 "tomes" (some in more than one vol.). Paris, Armand Colin, 1927-[1942]. [52]

Several leading French geographers have coöperated in the production of this superb set of regional geogs., notable for the skilful selection and arrangement of the materials, the clarity and distinction of the style, and the fine quality of the maps and photographs. While comprehensive and based on careful scholarship, the vols. are intended for the general reader as well as the specialist. Bibl. refs. are given. All parts of the world have been covered to date.

Klute, Fritz, ed. *Handbuch der geographischen Wissenschaft*. Potsdam, Athenaion, 1930-[1940]. 13 vols. [53]
2 vols. on genl. and 11 on regional geog., by 60-odd contributors. The aim is to render geog. interesting to the general reader, and hence the work is lavishly illustrated with maps, photographs, and colored views (see *Geog. Rev.* [476], 24 (1934), 159-161). Bibl. refs.

Meinardus, Wilhelm, ed. *Allgemeine Länderkunde der Erdteile*. . . . Hannover, Hahn, 1928-[1935]. [54]
Planned as a continuation of Wagner's *Lehrbuch* [59], Vol. 2, to consist of 7 vols. on the genl. geog. of the continents and to reflect Wagner's scholarly spirit. Primarily for the geographer rather than for the general reader. Extremely full bibl. refs. Vols. on North America (1928) and on Australia and Oceania (1931) had appeared before 1939.

Sievers, Wilhelm, and others, eds. *Allgemeine Länderkunde*. Leipzig and Vienna, Bibliographisches Institut, 1891-1933. [55]

The latest editions of the vols. in this series of regional geogs. are: Emil Deckert and F. Machatschek: *Nordamerika*, 1924; Otto Maull: *Deutschland*, 1933; Ludwig Mecking: *Die Polarländer*, 1925; Alfred Philippson: *Europa ausser Deutschland*, 1933; *idem* and Ludwig Neumann: *Europa*, 1906; Wilhelm Sievers: *Asien*, 1904; *idem*: *Süd- und Mittelamerika*, 1914; *idem* and Fritz Jaeger: *Afrika*, 1928; *idem* and Walter Geisler: *Australien und Ozeanien*, 1930. Each vol. contains bibl. data.

Stanford's Compendium of Geography and Travel. New issue. London, Stanford, 1894-1925. 12 vols. [56]

2 vols. to each continent, of which the most recent are: Europe, 1 (1924), 2 (1925); Africa, 2d ed., 1 (1907), 2 (1904); Asia, 1, 2 (1896); Australasia, 1 (2d ed., 1907), 2 (1894); Central and South America, 2d ed., 1 (1909), 2 (1911); North America, 1 (2d ed., 1915), 2 (1898). Comprehensive if now somewhat old-fashioned series of regional geogs.

Mill, H. R., ed. *The International Geography*, by Seventy Authors. New York, Appleton, 1909. 1,108 pp. (1st ed., London, Newnes, 1898.) [57]

Short monographs on the various parts of the earth, each by an authority; lists of refs. at the end of each contribution.

MANUALS BY INDIVIDUAL AUTHORS

James, P. E. *An Outline of Geography*. Including a Study Guide by C. F. Kohn. Boston, Ginn and Co., 1943. 568 pp. [58]

This distinctive modern textbook contains a short bibl. (pp. 419-426) of refs. "selected with a view not only to covering, as far as possible, the various parts of the world but also to illustrating the various methods of regional description and interpretation." The list is notable for its refs. to significant recent period. arts.

Wagner, Hermann. *Lehrbuch der Geographie*. Vol. 1. *Allgemeine Erdkunde*. 11th ed., Part 1 (see [60]). 10th ed., Part 2. *Physikalische Geographie*. Hannover, Hahn, 1922. Pp. 257-660. Part 3. *Biologische Geographie; Anthropogeographie*. 1923. Pp. 661-1100. Vol. 2. *Länderkunde von Europa*, by H. Wagner and Max Friederichsen. 6th ed. Part 1. *Allgemeine Länderkunde von Europa*. 1915. 184 pp. (See also [54].) [59]

Professor Wagner was unrivaled in his profound and critical knowledge

of geog. literature and methods. This knowledge is reflected in the great wealth of refs. provided in the *Lehrbuch*. Each of the main subdivisions of the work is introduced by a bibl. note, and numerous works dealing with specific points of detail are cited in footnotes. Succinct critical comments on many of the publs. cited.

Wagner, Hermann. *Allgemeine Erdkunde*. 11th ed., ed. by Wilhelm Meinardus. Part 1, *Mathematische Geographie*. Hannover, Hahn, 1938. 394 pp. [60]

The preceding editions of this work formed part of Wagner's *Lehrbuch* [59], but the title "Lehrbuch" has been dropped in this edition. The first 64 pages of this vol. consist of a genl. introduction to the *Allgemeine Erdkunde*, including an important bibl. guide to the whole field of geog.

Newbigin, Marion I. *A New Regional Geography of the World*. London, Christopher; New York, Harcourt Brace, 1929. 451 pp. [61]

Unstead, J. F., and E. G. R. Taylor. *General and Regional Geography for Students*. 10th ed. London, Philip, 1927. 529 pp. [62]

Lautensach, Hermann. (a) *Allgemeine Geographie zur Einführung in die Länderkunde: Ein Handbuch zum Stieler*. Gotha, Justus Perthes, 1926. 445 pp. (b) *Länderkunde: Ein Handbuch zum Stieler*. 1926. 843 pp. [63]

Text designed to accompany Stieler's *Atlas* [123]. Each vol. contains a bibl., 407 entries in (a), 755 in (b).

Reclus, Elisée. *Nouvelle géographie universelle*. Paris, Hachette, 1878-1894. 19 vols. (English translation ed. by E. G. Ravenstein and A. H. Keane, New York, Appleton, 1882-1895.) [64]

Probably the most ambitious attempt ever made by a single writer to encompass the entire subject of geog. Today largely superseded by more critical works.

GAZETTEERS AND RELATED WORKS

GENERAL GAZETTEERS AND GLOSSARIES

In this section we deal with gazetteers and related reference works in which the material is arranged in alphabetical order.

General encyclopedias present a wealth of geographical information.

Since, however, these are adequately discussed in Mudge-Winchell [1], a 39-50, b 13-14, c 15-16, d 13-15, no comment seems needed other than to call attention to the *Enciclopedia italiana di scienze, lettere, ed arti* (1929-1934, 24 vols.) and the *Enciclopedia universal ilustrada Europeo-Americana* (Barcelona, 1905-1933, 80 vols. in 81), both of which are especially noteworthy for their geographical articles and maps.

Data on dictionaries of languages will be found in Mudge-Winchell [1], a 51-85, b 15-18, c 17-21, d 15-20.

Gazetteers and related reference works provide information in alphabetical order concerning: (1) specific places, regions, and geographical features; (2) geographical names as such; (3) the meaning of generic terms for geographical features; (4) the meaning of other technical terms used in geographical studies.

Works which provide information regarding (1) *specific places*, etc., are usually called *gazetteers* or *geographical dictionaries*. Normally a gazetteer provides brief, concise accounts of the places, etc., listed in it (see Mudge-Winchell [1], a 322-326), and the gazetteers referred to below [66-73] are of this type. The term "gazetteer," however, is also applied to indexes to atlases or maps, in which no information is furnished other than names and their locations. Military needs have recently stimulated the preparation and publication of "gazetteers" of this kind by such agencies as the Hydrographic Office, the United States Board on Geographical Names, and the Army Map Service in this country, and the Geographical Section of the General Staff (G.S.G.S.) and the Permanent Committee on Geographical Names in Great Britain.

Works dealing with (2), *geographical names as such*, are of two main types: (a) those in which emphasis is laid on the historical or linguistic aspects of such names (for these see Mudge-Winchell [1], a 327-332, b 46-47, c 66, d 60-61; Wagner [60], 1938, pp. 23-24, and below [74]), and (b) those designed primarily as aids to consistency in the spelling of geographical names (see [76-85]).

Generic terms applied to geographical features (3) form integral parts of innumerable place names in all languages (e.g. *Mount Washington*, *Iwo Jima*, *Wady Halfa*). Hence their meaning must be understood if maps and other geographical works are to be properly prepared and interpreted. Many of these terms have equivalents in nearly all languages, since they apply to features of the landscape

found throughout the world (e.g. *hill, valley*); other terms apply to features found only in special environments of limited extent (e.g. *erg, salar*) and consequently are restricted to the languages and dialects spoken where these features occur. Some of these terms, moreover, are of purely local currency among peasants, fishermen, etc., and never find their way into the language dictionaries. A pioneer glossary of such terms is that of Knox [75], 1904. Olson and Whitmarsh [96], 1944, contains brief glossaries for many languages. Recently the Army Map Service has been issuing a comprehensive series of glossaries providing English translations of geographical terms in a large number of languages. While some of these glossaries have been compiled by the Army Map Service itself, the majority are reproduced from pamphlets issued by the G.S.G.S. and the Permanent Committee on Geographical Names for British Official Use (see [78, 79]).

From a good many different languages, geographers, geologists, and other scientists have borrowed as technical terms a large number of generic terms for geographical features (e.g. *esker, cirque, bolson*). They have also coined new terms, or applied new meanings to existing words, in order to designate geographical features for which terms do not exist in popular speech (e.g. *peneplane, monadnock*). Furthermore, the literature of geography and its related fields abounds in (4) *technical or semitechnical terms* that do not apply to geographical features (e.g. *latitude, phytogeography, sequent occupance*). Since many of these terms are not included in the ordinary dictionaries, or, where so included, are not always defined with the precise shades of meaning with which geographers use them, there is a genuine need for an English dictionary of scientific geographical terms, and also for bilingual or multilingual dictionaries or vocabularies giving the precise equivalents of such terms in different languages.

For references to a selection of technical dictionaries and glossaries of geographical value see *Geog. Rev.* [476], 30 (1940), 331-332. See also [6, No. 31]. [65]

Cassell's World Pictorial Gazetteer. Ed. by Sir J. A. Hammerton. London, Cassell [1940]. 1,024 pp. [66]

Medium-sized, inexpensive gazetteer, illustrated with line cuts in text.

Garollo, Gottardo. *Dizionario geografico universale*. 5th ed. rev. by

Arrigo Lorenzi. Milan, Ulrico Hoepli, 1929-1932. 2 vols. 2,191 pp.
(*Manuali Hoepli.*) [67]

Deals with geog. names and terms.

Nelson's World Gazetteer and Geographical Dictionary. With Map Supplement by Bartholomew. General editor, J. Gunn. London, T. Nelson [1931]. 575 pp. [68]
Handy small gazetteer.

Kende, Oskar. *Geographisches Wörterbuch: Allgemeine Erdkunde.* 2d ed. Leipzig and Berlin, B. G. Teubner, 1928. 238 pp. (*Teubners kleine Fachwörterbücher*, Vol. 8.) [69]

Arts. on places and regions are not included. On the other hand there are entries on peoples and races and short biographies of eminent geographers and explorers. The most useful features for the English-speaking student are the brief explanations of German technical terms, particularly in the fields of physical and mathematical geog. Reviewed in *Geog. Rev.* [476], 20 (1930), 175-176.

Banse, Ewald. *Lexikon der Geographie.* 2d ed. Brunswick and Hamburg, Westermann, 1923. 2 vols. Vol. 1, 786 pp.; Vol. 2, 785 pp. [70]
Deals not only with places and regions, as in a gazetteer, but also with geog. terms, with geog. aspects of such broad topics as agriculture, ethnology, commerce, etc., and with the lives of geographers and explorers.

Lippincott's New Gazetteer. Philadelphia, Lippincott, 1906 (reprinted in 1931). 2,053 pp. [71]

Lays special emphasis on the United States. While the picture of the world is that of 1905, the 1931 reprint includes a conspectus of the United States Census of 1930.

Longman's Gazetteer of the World. G. G. Chisholm, ed. London, Longmans, 1902. 1,788 pp. [72]
Espacial emphasis on the English-speaking world.

Vivien de St. Martin, Louis. *Nouveau Dictionnaire de géographie universelle.* Paris, Hachette, 1879-1895. 7 vols. *Supplément*, 1900. 2 vols. [73]

The most elaborate gazetteer in existence—a truly monumental work containing more than ten times as many words as Banse's *Lexicon* [70] and nearly three-fifths as many words as does the 14th ed. of the *Encyclopædia Britannica*. The articles on the larger regions run to con-

siderable length; those on the United States alone would fill nearly 200 pages if printed as is the present volume. Physical, political, hist., and economic geog., and ethnology are all covered. Many of the articles incorporate tables of statistics—now seldom of value except from the historical point of view. To most of the longer articles bibl. refs. are appended, but these are also out of date. The *Dictionnaire*, however, is still useful for those who wish to obtain facts about small and obscure places—particularly in Europe.

English definitions of terms that occur in a good many different languages. For more recent data of the same type see Olson and Whitmarsh [96], 1944.

SPELLING OF GEOGRAPHICAL NAMES

How to spell geographical names is a perplexing problem that nearly every geographer has to face when preparing manuscripts for publication. Gazetteers and indexes to atlases are not always reliable or consistent. For the benefit of writers in the English language certain approved lists have been prepared by official agencies of the American and British governments [77-81], and for names not included in the lists rules for ascertaining suitable spellings and for transliterating from foreign alphabets have been drawn up [82, 85]. Complete uniformity of practice is not to be expected, and some scholars may find good reasons for not always following the official recommendations. A uniform system, however, should always be followed throughout any one publication. [76]

The United States Board on Geographical Names (formerly United States Geographic Board) is an agency of the United States Government (now in the Department of the Interior) established for the purpose of standardizing the spelling of geographical names in government documents. Two older publications of the Board are listed below [80, 81]. Since Pearl Harbor the activities of the Board have been greatly enlarged and it has issued a large number of

pamphlets giving approved spellings and directions for the treatment of names in many different parts of the world. An unpublished index map has been prepared for consultation at the American Geographical Society showing for each country the various publications of the Board in which may be found decisions concerning names in that country. See M. F. Burrill, "Reorganization of the United States Board on Geographical Names," *Geog. Rev.* [476], 35 (1945), 647-652. [77]

Permanent Committee on Geographical Names for British Official Use. [Lists of names.] 1921-. [78]

For this committee the Royal Geographical Society has published in a series of pamphlets (listed in Mudge-Winchell [1], a 327, b 46, c 66) genl. lists of approved European, Asiatic, African and Oceanic (Pacific) names, and names for various countries and regions in the Eastern Hemisphere.

Sixth Report of the United States Geographic Board, 1890 to 1932. Washington, 1933. 834 pp. [80]

"In effect a handbook of geographic names. . . . The outstanding characteristic . . . is its scholarly quality. . . . Of the 25,000 names that the list itself contains, some 16,000 relate to the continental United States, 2,000 to Alaska, 3,000 to the Philippines, 900 to Hawaii, 300 to Puerto Rico and the Virgin Islands of the United States, . . . and 2,500 to foreign countries" (*Geog. Rev.* [476], 25 (1935), 150-151). Introductory chapter on the characteristics of geog. names, problems involved in naming geog. features, names in the United States and its possessions, foreign geog. names; and on the United States Geographic Board. The data on foreign names in [81] are incorporated in this report. Supplementary pamphlets entitled *Decisions of the United States Board on Geographical Names* (which superseded the Geographic Board in 1934) have been issued. It is understood that another comprehensive volume of decisions rendered since 1932 will be issued. See [77].

Rules for transliteration from some 56 languages or alphabets classed under the following headings: Teutonic, Keltic, Romance, Slavonic, Baltic, Other Indo-European, Caucasian, Finno-Ugrian, Arabic character (includes Arabic, Turki, Persian and Pashtu, Malay, Turkish), Semitic, and Miscellaneous (Basque, Cape Dutch, Maltese). Does not cover Chinese, Japanese, Hindustani, Javanese, etc. (see [82]).

TRAVELERS' MANUALS AND GUIDEBOOKS

TRAVELERS' MANUALS

(See also above, pp. 19, 20.)

Hints to Travellers. 11th ed. Vol. 1, *Survey and Field Astronomy*, by E. A. Reeves. Royal Geographical Society, London, 1935. 448 pp. Vol. 2, *Organization and Equipment, Scientific Observation, Health, Sickness and Injury*. Ed. by the Secretary with the help of many travellers. 1938. 487 pp. [86]

Vol. 2 is intended "principally for the use of travellers with their own organization of transport and supply, camp equipment, and followers." The several chapters deal with such practical problems as health, injury, etc., preparation at home, food and drink, clothing, transport, photography, and with scientific observations in the fields of meteorology, vegetation, geology, natural history, anthropology, and "antiquities" (not geog. as such). The subj. matter is arranged by topics and there are almost no regional entries in the index. Reviewed in *Geog. Rev.* [476], 29 (1939), 348-349.

Brouwer, H. S. ed. *Practical Hints to Scientific Travelers*. The Hague, Martinus Nijhoff, 1925-1929. 6 vols. Distributed in the United

States by the American Geographical Society, New York. [87]
"The principal object of this book is to compile the experiences of scientific explorers in different countries so that these experiences are easily accessible. . . . Many travellers, although well equipped with regard to scientific work, are only poorly informed as to the things of everyday life as well as to the customs and manners which prevail among white and colored peoples in distant regions. Yet this knowledge is hardly less necessary for the success of a journey." Arts. by different authorities on travel in the following regions: Vol. 1, Netherlands East Indies, South and East Africa, Philippines; Vol. 2, Polar regions, Spitsbergen, Novaya Zemlya, Greenland, Turkestan; Vol. 3, Mexico, Indo-China, India and Burma, New Zealand, New Guinea, Morocco; Vol. 4, Egypt, Angola, Australia, Antarctica, Venezuela, Haiti; Vol. 5, Ecuador, Eastern Congo, Northern Manchuria, Amur coastal region of far-eastern Asia, and Malay Peninsula; Vol. 6, Canada, Argentine Republic, Oceania, Madagascar, Tropical West Africa.

GUIDEBOOKS

The majority of guidebooks are prepared for tourists and consequently present information concerning matters in which tourists are interested: "the art museums, collections, etc., of any given place, its architectural and historical monuments, scenic features, railroad and other communications, hotels, literary and historical associations, etc." (Mudge-Winchell [1], a 339-340, b 48, d 62). The better guidebooks also may include general information on physical and human geography, together with maps and town plans. Such guidebooks fall into two main categories: (1) those issued as parts of comprehensive series according to generally consistent plans; and (2) miscellaneous guides. References are given below to well-known series of tourist guides, with specific data on certain recent volumes. Other important series of tourist guides are: *The American Guide Series* (state guides of the United States, see [459]); Hanson's *New World Guides to the Latin American Republics*; *Blue Guides* [614] (Europe); *Cook's Travellers' Handbooks* (mostly Europe); *Official Guide to Eastern Asia* [973]; *Guides Madrolle* [972] (Eastern Asia); guides published by the Touring Club Italiano (Italy, South America).

Besides tourists guides, reference should be made to guides for special types of traveler, notably (1) geographers, geologists, and other scientists (e.g. guides for excursions conducted in connection with

international and other scientific congresses; geological guidebooks to Western United States published by the United States Geological Survey); (2) mountaineers (guides usually issued by mountaineering clubs); (3) commercial travelers (e.g. guides published by the United States Bureau of Foreign and Domestic Commerce). For many regions not frequented by tourists and not covered by the standard tourist guides, there are available handbooks of general, commercial, and practical information for the use of business men, government officials, and others. References to sources of information regarding some of these are given in Part III.

The American Geographical Society's library contains some 1,500 guidebooks, a representative but by no means exhaustive collection. Modern guidebooks have been neglected by bibliographers. We know of no comprehensive, world-wide work on the subject. [88]

Murray, John, publ. *Handbook[s] for Travellers*. London. 1829- [1939]. [89]

These guidebooks covering large parts of Europe and Asia were widely used by British travelers throughout the greater part of the 19th century. The series as a whole has been discontinued with the exception of the *Handbook for India, Burma and Ceylon* (15th ed., 1939). A vol. on Japan was issued in 1913.

MAPS AND CARTOGRAPHY: BIBLIOGRAPHICAL AIDS

(See also [113-131, 174-186, 194-197].)

This section deals with works covering the whole field of cartography, but more especially with cartobibliographical aids—i.e. aids to the finding of maps and atlases.

Maps are of two kinds: *locational* and *topical* (or special). Locational maps are what we usually have in mind when we say, for example, "map of Maine" or "map of the world," without further qualification. They are locational in the sense that they are most frequently used for locating specific places. Such maps are designed to serve general-utility purposes—to meet the needs of the maximum number of people likely to be concerned with the areas that they cover. Consequently they show a combination of fundamentally important physical and human features, with their names—coast lines, rivers, lakes, cities, political units and their boundaries, sometimes relief, and, depending on the scale, roads, railroads, swamps, etc. (It should be noted that the term "locational map" is also applied to small diagrammatic maps showing the area covered by a larger map (or periodical article) in relation to the surrounding areas.) *Topical* maps, on the other hand, are designed to serve specialized purposes. They show, for example, combinations of all features of especial interest to particular groups of people (as on coast charts) or the distributions of certain specific phenomena only, such as population densities, railways, etc.

Some maps are based directly on surveys; others are compiled from

documentary sources. Most of the maps based on surveys are on large scales and are produced by governments. Since maps are the eyes of armies and navies, in many countries the principal agencies that carry on cartographical surveys are connected with the military establishments. The United States and Canada are among the few nations where this has not normally been the case, in peacetime at least.

The majority of maps on scales smaller than 1:250,000 (about 4 miles to the inch) are compiled from other maps, statistics, and other sources.*

The Second World War stimulated an enormous expansion of map-making activities on the part of governments to serve military needs and on that of private organizations to meet the public demand for geographical information pertinent to the war. In the United States the programs of the two principal civilian agencies of the government concerned with the mapping of our coast lines and interior—the United States Coast and Geodetic Survey and the United States Geological Survey, respectively—were stepped up. In addition, widespread ground, marine, and air surveys within but particularly outside the country were undertaken by the Corps of Engineers of the Army, the Army Air Forces, and the Hydrographic Office of the Navy. In order to supply the army with maps a new and extremely enterprising agency, the Army Map Service, was established. It has collected, indexed, and reproduced in various forms an immense quantity of maps of all kinds, including the sets of many of the topographic maps of foreign governments. Compiled maps for military intelligence and for strategic and tactical purposes

* Although discussion of specific maps does not fall within the scope of this volume, mention must be made of one group of maps which, because they are on the uniform scale of 1:1,000,000, for the most part carry layer tints showing altitudes, and conform to a greater or less extent to a standard scheme, are of exceptional utility for general reference and comparative purposes. These so-called "Millionth Maps" are available for most of the land areas of the world outside of northern North America and the U.S.S.R. and also for certain limited areas within the United States, Canada, and the U.S.S.R. They fall into three categories: (1) the official *International Map of the World on the Scale of 1:1,000,000*, the sheets of which are produced by various governments for the territories under their jurisdictions; (2) "Millionth Maps" more particularly of strategic areas produced before and more especially during the Second World War by mapping agencies of various governments; and (3) the American Geographical Society's *Map of Hispanic America on the Scale of 1:1,000,000*, covering the entire American continent and outlying islands south of the United States (107 sheets). Most of the sheets of (1) and (2) have been reprinted by the Army Map Service. See also [94, 547].

were produced in quantity by geographical or cartographical sections in such agencies as the Office of Strategic Services and the intelligence divisions of the Army, Air Forces, and Navy. The State Department and many other governmental agencies also expanded their cartographic work, and, of course, similar developments occurred to a greater or less degree in all of the belligerent states, but particularly in the British Empire.

One result of all this activity has been to render the older guides to the finding of maps somewhat obsolete, since so many new maps have appeared and so many new collections have been built up. Now that the war is over and considerations of security no longer require that much of this work be kept secret, it is to be hoped not only that the new cartographic treasures will be made generally available but also that access to them will be facilitated by the publication of up-to-date cartobibliographical aids.

One should not, however, be so dazzled by the wartime intensification of mapping as to conclude that the aids now available are without value. The accumulation of cartographic information has been going on for centuries and, while the Second World War has increased the pace, it has not brought about anything approaching a complete remapping of the earth's surface. Although far-reaching surveys have been made of many areas of strategic importance and many new "topical" maps have been compiled, a great deal of the feverish map making of the last six years has consisted in reproducing and revamping material that already existed in libraries and had already been dealt with in various aids.

By and large it must be admitted that librarians and bibliographers until recently have been rather stepmotherly in their treatment of maps as compared with their treatment of printed books, periodicals, periodical articles, etc. Atlases, being books, have fared somewhat better. Separate maps are seldom reviewed in the newspapers and popular magazines, and they are not covered satisfactorily for research purposes in most of the general bibliographical works, such as Mudge-Winchell [1], Hirshberg [2], and Besterman [3]. Although maps are not books, the convenient if not wholly appropriate term "cartobibliography" has gained acceptance. Cartobibliographical and related aids are of the following principal kinds:

- 1) Works which provide general information concerning map collections as units;

- 2) Cartobibliographies proper, which aim to provide information about maps irrespective of where they are housed or published;
- 3) Map catalogues, embracing either (a) the maps in a particular collection or group of collections (i.e. union lists), or (b) those issued by a particular governmental agency, commercial publisher, or scientific institution;
- 4) Index maps to specific maps—i.e., maps which show the areas covered by the individual maps of a particular kind or series, as, for example, the topographic sheets of the United States Geological Survey. These often accompany the map catalogues issued by governmental mapping agencies.
- 5) Generalized maps (usually compiled from maps of the preceding type) showing the areas covered by all maps of specified kinds or scales without attempting to provide detailed information concerning the individual maps or map sheets themselves.

As the number of works of these various kinds, especially of map catalogues, is large, it would take another volume to deal with them as fully as we deal here with bibliographies and periodicals. A few references are given immediately below to a selection of works which put one on the track of other cartobibliographical aids, and under the appropriate topical and regional headings in Parts II and III a few cartobibliographies of especial note are listed. No attempt has been made to list specific map catalogues and index maps, with one or two exceptions (notably [94]). For these [96-99] should be consulted. It should be noted, however, that most *geographical* aids to research devote attention to maps and, being more selective, are frequently of greater value to the research student in finding the particular maps he wants than are lists and catalogues devoted exclusively to maps themselves. In many of the annotations to the references in this volume we have attempted to indicate something about the treatment of maps, where this is especially worthy of comment. All six of the great current bibliographical repertoires devoted to geography [6-11] contain many references to maps.

Geographers and other map users would benefit were someone to compile and publish a classified cartobibliography of *topical* maps. Even if this were confined to the topical maps in readily available world atlases, it would serve an extremely useful purpose. An adjunct to such a work might well be a guide to the finding of maps drawn on different projections. To locate a world or regional map

on a specific projection is often like hunting for a needle in a haystack. [92]

Phillips, P. L. *A List of Geographical Atlases in the Library of Congress*. 4 vols. Washington, 1909-1920. [112]

The only comprehensive bibl. of atlases. Lists 5,324 atlases dating from the Middle Ages through 1919. Divided into (1) basic chron. lists of atlases; (2) alph. auth. lists; (3) alph. indexes. For many but not all of the atlases there are analytical notes listing individual maps: primarily "maps relating to America, plans of cities throughout the world, and material of specific interest not usually found in atlases." The indexes

cover only the maps listed in the analytical notes, which are less complete for modern than for early atlases. In the indexes topical subhdgs. are given under areal hdgs., there being no independent topical hdgs.

GENERAL WORLD ATLASES

Atlases are of four kinds:

- 1) *General world atlases*, designed to meet widely diverse public needs. These are discussed in this section.
- 2) *Topical or special world atlases*, which deal with particular subjects (e.g. history, meteorology) and are listed under the appropriate topical headings in Part II.
- 3) *General regional* and (4) *topical regional* atlases, of which the scope is limited to specific regions. These are listed under the appropriate regional headings in Part III.

In choosing an atlas as an aid to geographical research one should consider its size, the relative number of locational and topical maps (see above, p. 83) that it contains, the scales of and areas covered by the maps of both types, and the subjects illustrated by the topical maps. No less important are the accuracy and clarity of the individual maps, the balance of the work as a whole, and the nature of the text, indexes, and other noncartographical adjuncts. Criteria for judging the quality and utility of general atlases, particularly from the reference librarian's point of view, are indicated in Mudge-Winchell [1], a 332-333; Ristow [110], 1945, and "World Reference Atlases" [109], 1945.

The following references are to a selection of 18 general world atlases in frequent use at the American Geographical Society. While other atlases, equally good in many particulars, might also be cited, it is believed that this selection includes the most outstanding works. The following table presents some salient facts about the 18 atlases for purposes of rapid comparison. It shows in the first column the sizes of the atlases in terms of space devoted to maps—a fairly satisfactory indication of the amount of cartographic information that an atlas provides. The second and third columns show the map space devoted to locational maps, and the fourth and fifth columns, respectively, show the percentages of the total map space devoted to topical maps and to maps of the home country. Map space was calculated by multiplying the number of pages devoted to maps

by the area of the page in square centimeters. The data are based on an examination of the latest editions in the collection of the American Geographical Society.

^a Maps covering the whole of "Mitteleuropa" are counted among maps of Germany.

^b Data based on 1931 edition.

^c Data based on 1935 edition.

In many atlases certain maps designated as "political" and "physical" were counted as locational rather than as topical. Such maps are not topical in the sense in which maps showing the distribution of rainfall or of votes in an election would be "physical" or "political." The

conventional "political" map in an atlas in reality is a locational map on which political units are more emphasized than are relief, drainage, etc., and the reverse is true of the conventional "physical" map. The primary purpose of maps of both types, however, is to enable the reader to locate specifically named places.

In many atlases separate "political" or "physical" maps, or both, are provided for certain areas (frequently the world and the continents) in addition to locational maps not designated as either "political" or "physical." Where this is the case, the latter are called "basic locational" maps (abbreviated "b.l.") in the annotations below.

In the table the atlases are listed in decreasing order of size as measured in terms of map space. It is also of interest to rank them as follows, according to percentage of map space devoted to (1) *locational maps*: Stieler (100), *Encyclopædia Britannica*, 1942 (100), *Universel* (99), Italian (95), Meyer (92), *Times* (91), *Handy Reference* (90), Philip (89), Andree (88), *Citizen's* (87), *Encyclopædia Britannica*, 1945 (82), *New World* (74), *Världsatlas* (74), Rand McNally (63), *Oxford Advanced* (59), Goode (58), Sydow-Wagner (58), Vidal-Lablache (46), Soviet (26); (2) *maps of the home country*: Stieler (7), *Oxford Advanced* (8), *Times* (11), *Universel* (11), Philip (14), Vidal Lablache (15), Meyer (16), Sydow-Wagner (18), Andree (19), *Citizen's* (19), *Handy Reference* (19), *Världsatlas* (26), *Encyclopædia Britannica*, 1945 (36), *New World* (38), *Encyclopædia Britannica*, 1942 (44), Soviet (72), Rand McNally (74).

Some facts of practical value to the geographer that are brought out by these figures and in the annotations to the atlases listed below may be briefly stated. Among the larger atlases (20 or more square meters of map space), the most generally useful are Andree, *Times*, *Universel*, Italian, and Stieler. In none of these is there disproportionate (over 20 percent) emphasis on the home country. The first two, but more especially Andree, have the advantage of a goodly number of well-selected topical maps. The others are predominantly locational. The two American atlases (*New World* and Rand McNally) are of value primarily for their detailed locational maps of the several states of the United States. The topical maps and the locational maps of foreign countries in these atlases are less distinguished. The Soviet atlas is unique by reason of its wide variety of topical world maps and its locational and topical maps of the

U.S.S.R. It contains, however, no regional maps of other parts of the world. Vidal-Lablache is partly historical; the topical maps pertaining to modern geography are varied and excellent.

Among the smaller atlases (less than 20 square meters) Goode, Sydow-Wagner, and the *Oxford Advanced* are school atlases, especially useful for their topical maps, which are well distributed both regionally and in terms of geographical subjects. Actually more map space is devoted to topical maps in Goode (5.0 sq. m.) than in Andree (4.2), and in both Sydow-Wagner (3.9) and *Oxford Advanced* (2.9) than in *Times* (3.0). An excellent working combination would be Andree and Goode, the former for its clear, comprehensive hachured locational maps and its topical maps more particularly for Europe, and the latter for its layer-tinted locational maps and its topical maps more particularly for the United States. From the point of view of beauty of workmanship and of geographical originality displayed in its topical maps, *Världsatlas* stands in a class by itself. The other smaller atlases are all primarily locational. Except for Meyer, the quality of their maps does not approach that of *Times*, Andree, Stieler, or the Italian atlas. The shortcomings of the locational maps in *Encyclopædia Britannica Atlas* (a large atlas in terms of bulk but not of map space) are out-balanced by the utility of the statistical tables in the 1942 edition and of the topical world maps in the 1945 edition. Meyer and *Handy Reference* are serviceable for quick reference on the reader's desk or in his lap in cases where a larger atlas is not required. [113]

LARGE ATLASES

AMERICAN AND BRITISH

Rand McNally Commercial Atlas and Marketing Guide. 76th ed. New York and Chicago, Rand McNally, 1945. 568 pp. (also a Road Atlas of United States, Canada, and Mexico in pocket). 39 x 53 cm. [114]

In two parts: (1) The United States and Its Possessions; (2) Foreign Countries.

Map space (excluding Road Atlas), 44 sq. meters; U.S.A., 72 percent; locational maps, 63 percent (b.l. maps of foreign countries carry hachures or no relief; b.l. maps of U.S. states tinted according to density of population, no relief); topical maps, 37 percent (mostly U.S.A.; especially data designed to meet needs of business men, e.g. transporta-

tion routes, economic data, etc.). Separate index for each b.l. map of U.S. states, giving populations, altitudes, and other facts of commercial interest (e.g. railroad connections, post offices, banking towns, etc.) as well as locations; genl. index to cities for b.l. maps of foreign countries, giving populations.

The New World Loose-Leaf Atlas. 6th ed. New York, Hammond. New plates currently issued for loose-leaf binder. Ca. 416 pp. (also Postal Guide, at back). 34 x 51 cm. [115]

Map space, 47 sq. meters; U.S.A., 38 percent; locational maps, 74 percent (b.l. maps, some with hachures, mostly without relief; physical maps of continents and states in U.S., layer tinted); topical maps, 26 percent (world, continents; climate, econ. geog., population, history, etc.). Separate indexes for each b.l. map (for U.S. states, separate indexes to counties and incorporated places, giving populations, and to smaller places giving location only); no genl. index.

Encyclopædia Britannica World Atlas. . . . Prepared by G. D. Hudson under the editorial direction of Walter Yust. Chicago, etc., Encyclopædia Britannica, 1942. 112 pp. of maps. 139 pp. of index, etc. 269 pp. of "Geographical Summaries," etc. 31 x 41 cm. (Also in an edition published by C. S. Hammond, New York, 1945, with 28 additional pp., but without the Geographical Summaries.) [116] Map space (excluding maps in "Geographical Summaries"), 16 sq. meters; U.S.A. 44 percent; locational maps, 100 percent (b.l. maps, no relief; layer-tinted physical maps of world, continents, and U.S.). Index gives populations as well as locations. Reviewed by M. J. Proudfoot in *Geog. Rev.* [476], 33 (1943), 347-348. On "Geographical Summaries" see [50]. The 1945 edition contains 25 pp. of world maps (physical geog., population, languages, economic geog.).

The Citizen's Atlas of the World. J. G. Bartholomew, ed. 5th ed. Edinburgh, The Geographical Institute, 1935. 192 pl. 103 pp. 24 x 36 cm. An 8th ed. was published in 1944. [117]

Map space, 17 sq. meters; British Isles, 19 percent; locational maps, 87 percent (gray hachures or no relief); topical maps, 13 percent (world, Europe, British Isles; climate, ocean currents, time zones, communications, etc.). Text incl. etymology of place names, principal journeys of exploration, etc. Index.

Philip's International Atlas. . . . George Philip, ed. London, Philip, 1931. 158 pl. 98 pp. 28 x 41 cm. An "Interim Edition" was published in 1944. [118]

Map space, 18 sq. meters; British Isles, 14 percent; locational maps,

89 percent (gray hachures); topical maps, 11 percent (world, Europe, British Isles). No text. Index.

The Times Survey Atlas of the World: A Comprehensive Series of New and Authentic Maps Reduced from the National Surveys of the World and the Special Surveys of Travellers and Explorers with General Index of Over Two Hundred Thousand Names. Prepared under the direction of J. G. Bartholomew. London, *The Times*, 1922. 112 pl. 32 x 46 cm. [119]

Map space, 33 sq. meters; British Isles, 11 percent; locational maps, 91 percent (b.l. maps, layer tinted; political maps of continents); topical maps, 9 percent (world, continents, British Isles; ethnography, population, railways, industries). No text. Index (in separate pamphlet).

FOREIGN

Vivien de Saint-Martin and Schrader. *Atlas universel de géographie.* New ed. by F. Schrader. Paris [1943?]. 80 pl. 88 pp. 35 x 45 cm. [120]

Map space, 25 sq. meters; France, 11 percent; locational maps, 99 percent (b.l. maps, brown hachures; layer-tinted physical maps of world and continents). Index.

Bol' shoi' sovetskii atlas mira [Great Soviet World Atlas]. Moscow [U.S.S.R. government publication], 1937, 1939. 2 vols. [121]

Vol. 1, ed. under the direction of V. E. Motylev; Part 1, World Maps (pls. 1-83); Part 2, Maps of the U.S.S.R. (pls. 84-168). Vol. 2, ed. under the direction of S. A. Kutafev; Part 1, Political-Administrative, Survey, Economic, and Physical Maps of U.S.S.R. (pls. 9-134); Part 2, Historical Maps of the Civil War in the U.S.S.R. (pls. 135-143). A third vol. for other parts of the world was planned but not published. Map space, 47 sq. meters; U.S.S.R., 72 percent; locational maps (mostly the "survey maps" of U.S.S.R. in Vol. 2), 26 percent (layer tints); topical maps, 74 percent (world and U.S.S.R. only; these are of great variety and ingenuity, covering physical and human geog., with special emphasis on natural resources, manufacturing, agriculture, and other economic circumstances). Reviewed by G. B. Cressey in *Geog. Rev.* [476] 28 (1938), 527-528.

For Vol. 1, an English transl. of the titles of and legends on the maps is available (*Great Soviet World Atlas*, Volume 1, transl. under the direction of G. B. Map space, 27 sq. meters; Italy, 7 percent; locational maps, 95 percent (b.l. maps, brown hachures; political and layer-tinted physical maps of world and continents); topical maps, 5 percent (incl. communications, ethnography of Europe). Index. Sources of information indicated on backs of plates. Comparable to Stieler [123], except that plates are larger and less crowded. 4th ed. reviewed in *Geog. Rev.* [476], 24 (1934), 162-163.

Stieler: Grand Atlas de géographie moderne. 10th ed.; édition internationale. Gotha, Justus Perthes, 1934-. 114 pl. 25 x 40 cm. [123]
Map space, 23 sq. meters; Germany and Central Europe, 7 percent; locational maps, 100 percent (brown hachures; extremely detailed). Index.

The German edition is known as *Stieler's Handatlas*. In the International Edition, which was still incomplete in 1939, the maps are in the languages of the countries mapped.

Världsatlas. . . . Ed. under the direction of Axel Elvin. Stockholm, Åhlén & Åckerlund, 1934. 50 pl. 248 pp. 23 x 39 cm. (Revised ed. of *Nordisk världsatlas*, 1926.) [124]

Map space, 9 sq. meters; Scandinavia, 26 percent; locational maps, 74 percent (b.l. maps, land areas buff tinted, political boundaries in color, purple hachures; layer-tinted physical maps); topical maps, 26 percent (world on equal area projections, Europe, U.S.A.; physical and human geog., population distribution, etc.). Comprehensive text. Index.

Andrees allgemeine Handatlas. 8th ed. Ed. by Ernst Ambrosius. Bielefeld and Leipzig, Velhagen & Klasing, 1930, 224 pl. 29 x 45 cm. [125]

Map space, 35 sq. meters; Germany and Central Europe, 19 percent; locational maps, 88 percent (brown hachures; somewhat less detailed than Stieler); topical maps, 12 percent (world, Europe, Germany; physical and economic geog., populations, religions, etc.) No text. Index in separate vol. (*Namenverzeichnis zu Andrees Handatlas*, 643 pp.).

A rev. ed. in 100 plates, from which the larger locational maps were omitted, was published in 1937 (index in same vol.).

Histoire et géographie: Atlas général Vidal-Lablache. New ed. Paris, Colin, 1925. 131 pl. 48 pp. 28 x 38 cm. [126]
 History (pls. 1-52); geog. (pls. 52a-131). Map space, 20 sq. meters; France, 15 percent; locational maps, 46 percent (brown hachures); topical maps, 54 percent (majority historical; also physical, human, and economic geog.). Index.

SMALLER ATLASES

The Handy Reference Atlas of the World. John Bartholomew, ed. 14th ed. (Geographical Institute.) Edinburgh and London, 1940. 234 pl. 220 pp. 15 x 21 cm. [127]
 Map space, 6.7 sq. meters; British Isles, 19 percent; locational maps, 90 percent (mostly without relief; a few with gray hachures); topical maps, 10 percent. Index.

Meyers geographischer Handatlas. 7th ed. Leipzig, Bibliographisches Institut, 1928. 92 pl. 200 pp. 15 x 24 cm. [128]
 Map space, 14 sq. meters; Germany and Central Europe, 16 percent; locational maps, 92 percent (b.l. maps, brown hachures; for continents, political and layer-tinted physical maps); topical maps, 8 percent (world, Europe, Germany). Index.

SCHOOL AND COLLEGE ATLASES

Goode, J. P. *Goode's School Atlas: Physical, Political, and Economic.* New York, Chicago, Rand McNally, 1943 (latest ed.). 286 pp. (173 pp. of maps). 25 x 29 cm. [129]
 Map space, 13 sq. meters; U.S.A., 19 percent; locational maps, 58 percent (layer tinted; many city plans on small scales); topical maps, 42 percent (especially for world, U.S., and Canada; cover wide range of subjects, incl. map projections, physical geog., soils, vegetation, agriculture, industries, etc.). Index.

Atlas of World Maps for the Study of Geography in the Army Specialized Training Program. Headquarters, Army Service Forces, 1943. (*Army Service Forces Manual M-101.*) 30 pl. 13 pp. 55 x 26 cm. [129a]
 Map space, 4.3 sq. meters. Exclusively world maps covering population, languages, religions, and various aspects of physical, economic, and political geog. See also [314].

The Oxford Advanced Atlas. John Bartholomew, ed. 6th ed. London, etc., Oxford Univ. Press, 1940. 96 pl. 36 pp. 25 x 37 cm. [130]

Map space, 9 sq. meters; British Isles, 8 percent; locational maps, 59 percent (layer tints); topical maps, 41 percent (world, continents, especially Europe, British Isles; climate, population, occupations, economic geog., etc.). No text. Index.

Sydow-Wagners methodischer Schul-Atlas. 20th ed. Ed. by H. Haack and H. Lautensach. Gotha, Justus Perthes, 1932. 62 pl. 15 pp. 18 x 31 cm. [131]

Map space, 6.7 sq. meters; Germany and Central Europe, 18 percent, locational maps, 58 percent (layer tints and brown hachures); topical maps, 42 percent (well distributed regionally but with main emphasis on Europe and Germany; cover a wide range of geog. subjects). List of sources in text. Index (separate pamphlet).

II. TOPICAL AIDS

Though none of the works listed in this section is restricted in scope to any specified region or regions, each one is pertinent to the study of a particular aspect of geography rather than to the field as a whole. Some are general aids covering the sciences, social studies, and humanities in the large. Others are more specialized aids to work in subjects closely allied to geography, and still others deal with specific branches of geography as such. In general, no attempt is made to include periodicals dealing with the various fields related to geography, as their number is legion and data concerning them may readily be found in the bibliographies to which reference is made.

Data on maps pertaining to special branches of geography will be found in Haack [98], 1936-1937; [1164], 1942. [132]

HISTORICO-GEOGRAPHICAL STUDIES

Geography and history merge together over broad realms. For guidance to geographical studies bearing on the ages before the dawn of recorded history, aids to geological, anthropological, and archeological research should be consulted. Here, by historico-geographical studies, we mean investigations based primarily on written documents and maps. These fall into three main categories:

- 1) Studies of human history in the light of geographical circumstances, as, for example, studies that seek to narrate or interpret the unfolding of past events in terms of influences of the natural environment. These might be called studies in *geographical history*. References to a selection of important works by geographers and historians bearing on this subject will be found in H. E. Barnes, *The New History and the Social Studies* (New York, Century, 1925), chap. 2, "The Relation of Geography to the Writing and Interpretation of History," pp. 40-75.
- 2) Studies which seek to reconstruct the geographical circumstances of the past, either as they existed at a particular time or as they developed during longer or shorter periods. This field is usually called *historical geography*. See [6, Nos. 20-25].

- 3) Studies of the past development of geographical knowledge, customarily known as the *history of geography*.

(Logically a fourth category would comprise the "geography of history" (or of historiography), which might deal with the geographical distribution of historical investigations and with the influences of geographical circumstances on the growth of historical thought.)

The following references are classified under three main headings:

(1) aids of general utility in connection with historico-geographical studies, and aids of value primarily in connection with (2) historical geography, and (3) the history of geography. Since, however, these three subjects are closely interrelated, it is recommended that the student of any one of them consult not only the references for that subject but those given under the other headings as well.

[135]

Deals with sources of information (for the most part English publs.) regarding current work in geog., archaeology, and history, "with a view to facilitating study in the zones of overlap between the three subjects."

Dutcher, G. M., and others, eds. *A Guide to Historical Literature*. New York, Macmillan, 1937. 1,250 pp.

[136]

26 sections, each dealing with a topic (e.g. hist. and auxiliary sciences, genl. hist., exploration and colonial expansion), a chron. period (e.g. contemporary times, 1871-1930), a region during a chron. period (e.g. Near East in ancient times), or a region (e.g. France, Africa); each section subcl. consistently, "as far as varying conditions have permitted,"

by subjs. (incl. bibl.; encyclopedias; geog. and atlases; ethnography; source books, collections of sources; genl. hist.; hist. of special periods, regions, or topics; constitutional, economic, social, and cultural hist.; biography; govt. publs.; academy publs.; periodicals); fully ann. by a large group of contributors; index to auths., periodicals, and academy publs.

Coulter, Edith M., and Melanie Gerstenfeld. *Historical Bibliographies: A Systematic and Annotated Guide*. Berkeley, Calif., Univ. of California Press, 1935. 218 pp. [137]

Cl. in the main by continents, subcl. by countries (United States by states); further subcl. by topics; also sections on genl. bibls., ancient world, voyages and travels, colonial possessions, and, under "Europe," on medieval, modern, and religious hist.; 775 entries; ann.; genl. index.

[139] An immense wealth of detailed bibl. information bearing on ancient geog. will be found in the articles in this monumental encyclopedia dealing with countries, provinces, cities, etc. See also [154] and [175].

HISTORICAL ATLASES

Treharne, R. F. *Bibliography of Historical Atlases and Hand-Maps for Use in Schools*. London, G. Bell, 1939. 24 pp. (*Historical Assn. Pamphlet*, No. 114.) [140]

Deals with foreign as well as with British and American atlases. 3 main parts: (1) classroom atlases, (2) hand maps for class use, (3) reference atlases and hand maps; 104 entries; ann.

Spruner von Merz, Karl, and others. [Historical Atlas.] Gotha, Justus Perthes, 1846-[1938]. [141]

The first ed. of this great atlas, entitled *Dr. Karl von Spruners historisch-*

geographischer Hand-atlas, was issued in 3 parts: (1) *Atlas antiquus*, 1850; (2) *Historisch-geographischer Hand-atlas zur Geschichte der Staaten Europas vom Anfang des Mittelalters bis auf die neueste Zeit*, 1846; (3) *Historisch-geographischer Hand-atlas zur Geschichte Asiens, Afrikas, Amerikas und Australiens*, 1851. A second ed. of the whole work appeared in 1854-1855. Third eds. of Parts 1 and 2, ed. by Theodore Menke, were publ. in 1865 and 1880, respectively, the latter under the title *Spruner-Menke Hand-atlas für die Geschichte des Mittelalters und der neueren Zeit* (90 colored maps, 376 inset maps, 42 pp. text; 27 x 40 cm.). A new ed. of Part 1, entitled *Atlas antiquus: Atlas zur Geschichte des Altertums*, ed. by Wilhelm Sieglin, was begun in 1893 and continued by Max Kiessling; to be completed in 8 fascicules.

Shepherd, W. R. *Historical Atlas*. 7th ed. New York, Holt, 1929. 216 pp. colored pls. (ca. 250 maps), 127 pp. contents, index, etc. 18 x 26 cm. [142]

Based in the main on German historical atlases, the maps were printed in Germany. Emphasis largely on European political and military hist., though America and other parts of the world as well as economic and cultural hist. are also represented.

Putnam's Historical Atlas: Medieval and Modern . . ., by Ramsay Muir, George Philip, and R. M. McElroy. 6th ed. New York and London, Putnam, 1927. 96 pls. with 229 colored maps and diagrams; 132 pp. text, contents, index, etc. 24 x 29 cm. [143]

Contains a section on the economic hist. of the United States illustrated by uncolored maps, also an introduction illustrated by 40 uncolored maps and plans, dealing with the development of Europe and the United States. This atlas is distinguished by its emphasis upon (1) the physical basis of hist., (2) economic and other aspects of hist. as well as the political aspect, and (3) the expansion of European influence or control throughout the non-European world (preface).

Schrader, F. *Atlas de géographie historique*. New ed. Paris, Hachette, 1911. 55 pls. in color on backs of which is historical text containing many detailed figures, diagrams, etc. 26-38 cm. [144]

Emphasis mainly on ancient, medieval, and modern European hist.; also plates devoted to maps of the world at various dates, Asia, America, colonial expansion, etc.

Droysen, G. *Allgemeiner historischer Handatlas*. . . . Bielefeld and Leipzig, Velhagen u. Klasing, 1886. 88 colored pl.; 94 pp. text, contents. 29 x 42 cm. [145]

Emphasis on Europe and Germany.

History of Geography

(See also [6, Nos. 26, 27].)

The history of geography seeks to record how geographical data have been acquired through exploration and field studies, how they have been recorded and interpreted for scientific, educational, and popular purposes, and how geographical knowledge has been disseminated. Geographers are naturally interested in the history of geography as providing background and perspective for a better understanding of the growth and nature of their own science. The history of geography, however, embraces an immense complex of activities and ideas, which have played an extremely important part in the larger history of civilization as a whole, and hence is a field that has been cultivated fully as intensively by historians, classicists, Orientalists, etc., as by geographers as such. GENERAL WORKS ON THE HISTORY OF SCIENCE
AND OF GEOGRAPHY

History of science: Mudge-Winchell [1], a 168, d 32. [146]

Sarton, George. *Introduction to the History of Science*. Baltimore, Williams & Wilkins. Vol. 1, 1927, 850 pp. Vol. 2 (in 2 separately bound parts with continuous pagination), 1931, 1,302 pp. (*Carnegie Instn. of Washington Publ.*, No. 376.) [147]

This compendium, containing a wealth of bibl. refs. both to the original sources and to secondary works, covers the development of science throughout the world from Homeric times to A.D. 1300. The primary divisions of the text are by chron. periods, subcl. by civilizations (e.g. Greeks, Arabs, Europeans, Chinese) and by topics, incl. geog.; genl. index in each vol.

Josephson, A. G. S. *A List of Books on the History of Science*. . . . (The John Crerar Library.) Chicago, 1911. 297 pp. [148]

5 main parts: (1) genl. works, (2) social sciences, (3) physical sciences, (4) natural sciences (incl. geog.), (4) medical sciences, each subcl. by topics; for many works contents analyzed; genl. index.

Periodical

Isis: An International Review Devoted to the History of Science: Founded and Edited by George Sarton. Official Quarterly Journal of the History of Science Society

Cambridge, Mass. (formerly Brussels, Bruges), 1913-. (Suspended July, 1914—Aug., 1919.) Subtitle varies. [149]
Contains comprehensive critical bibls.

Broad survey of the literature on the history of geography: Wagner [60], 1938, pp. 1-5.—See also [1166]. [150]

Dickinson, R. E., and O. J. R. Howarth. *The Making of Geography*. Oxford, Clarendon Press, 1933. 264 pp. [151]

Selected list of books and articles which deal specifically with the hist. of geog. on pp. 254-258. Reviewed in *Geog. Rev.* [476], 23 (1933), 701-702.

Günther, Siegmund. *Geschichte der Erdkunde*. Leipzig and Vienna, Deuticke, 1904. 354 pp. (*Die Erdkunde*, ed. by Maximilian Klar, Pt. 1.) [152]

An abundance of bibl. refs. in the footnotes for period prior to 1800.

HISTORY OF GEOGRAPHY FOR THE MOST PART PRIOR TO THE NINETEENTH CENTURY

A section devoted to the ancient geography of India appeared regularly in each volume of *Annual Bibliography of Indian Archaeology* (covering 1926-1937), Leyden; see also list of "important treatises and writings on ancient Indian geography," by B. C. Law in the volume for 1935, pp. 12-20.—For bibliographical data on English geographical literature to 1650, see E. G. R. Taylor's *Tudor Geography, 1485-1583* (London, Methuen, 1930; 299 pp.) and *Late Tudor and Early Stuart Geography, 1583-1650* (London, Methuen, 1934; 333 pp.). [153]

Gisinger, F. "Geographie," in Pauly [139], Supplementband IV, 1924, cols. 521-685. [154]

Detailed survey of ancient and medieval geog. with wealth of bibl. refs.

Kramers, J. H. "Djughrāfiyā" [Geography], in Houtsma, *Encyclopaedia of Islam* [922], Supplement, 1938, pp. 61-73. [155]

Article on the history of Mohammedan geog. literature with many refs. in text and a short bibl. of outstanding editions and translations of the sources, bibls., and other secondary works.

Taeschner, Franz. *Die geographische Literatur der Osmanen*. Leipzig, Brockhaus, 1923. (Separate from *Zeitschrift der Deutschen Morgenländischen Gesellschaft*, Vol. 2, No. 1.) [156]

Bibl. refs. in footnotes. Covers period since 1800 as well as earlier literature.

Kretschmer, Konrad. "Die Literatur zur Geschichte der Erdkunde vom Mittelalter an (1907-25), *Geog. Jhrb.* [6], 41 (1926), 122-189. [157]

Deals almost entirely with studies of the history of geog. prior to 1800. 6 parts: (1) genl., (2) early Christian Middle Ages, (3) Arabs and other Orientals, (4) scholastic period, (5) age of discovery (subhdgs.: explorations, cartography), (6) age of measurements; 708 entries; ann.; auth. index.

Wright, J. K. *The Geographical Lore of the Time of the Crusades: A Study in the History of Medieval Science and Tradition in Western Europe*. New York, 1925. 584 pp. (*Amer. Geog. Soc. Research Ser.*, No. 15.) [158]

Deals primarily with 12th and 13th centuries, with introductory chapters on earlier periods. Bibl. (alph. by auths.) on pp. 503-543, preceded by a bibl. note (pp. 491-502) designed to give a rapid introduction to the outstanding publs. in the field of ancient and medieval geog. to A.D. 1250 (topical cl.).

Atkinson, Geoffroy. *La Littérature géographique française de la Renaissance: répertoire bibliographique. . . . Description de 524 impressions d'ouvrages publiés en français avant 1610, et traitant des pays et des peuples non européens, que l'on trouve dans les principales bibliothèques de France et de l'Europe occidentale*. Paris, Picard, 1927. 565 pp. *Supplément*, 1936, 88 pp. [159]

Main list chron. by titles; 7 alph. indexes incl. index to geog. names.

HISTORY OF GEOGRAPHY FOR THE MOST PART SINCE 1800

Shortly after the First World War three reviews of the progress of geographical work in Europe were published by the American Geographical Society: W. L. G. Joerg, "Recent Geographical Work in Europe," *Geog. Rev.* [476], 12 (1922), 431-484 (also printed separately); Sir John Scott Keltie, *The Position of Geography in British Universities*, 1921 (*Amer. Geog. Soc. Research Ser.* No. 4); and Emmanuel de Martonne, *Geography in France*, 1924 (*ibid.*, No. 4a). With these may also be mentioned Roberto Almagrià, *La*

Geografia, 2d ed., Rome, 1922 (*Guide Bibliografiche*). All of these contain bibliographical references.—See also [950, 974, 977]. [160]
 On geographical work in certain European countries during the Second World War articles or notes have appeared in the *Geographical Review* [476], 36 (1946), as follows: Belgium, pp. 155–156; France (by Jean Gottmann), pp. 80–91; Germany (by Eric Fischer), pp. 92–100, (by T. R. Smith and L. D. Black), pp. 398–408; Great Britain (by L. S. Wilson), pp. 597–612; Norway, pp. 326–327; U.S.S.R. (by Jean Gottmann), pp. 161–163. [161]

Hartshorne, Richard. *The Nature of Geography: A Critical Survey of Current Thought in the Light of the Past*. Lancaster, Penn., Assn. of Amer. Geogs., 1939. 488 pp. Also in *Annals Assn. of Amer. Geogs.* [479], 29 (1939), 171–658. [162]

Scholarly and comprehensive survey and critique of writings in the field of geog. bearing particularly on methodology. List of refs. to works cited in the text, pp. 178–197: 2 main parts: (1) hist. of geog. thought prior to 1900 (genl. hist. studies of geog. methodology and illustrative works); (2) geog. thought in the 20th century (by topics, incl. genl. surveys, methodology of geog. in genl., theory of regions, landscapes, and boundaries, each subcl. by countries); 400 entries; auth. and subj. indexes.

Pfeifer, Gottfried. *Regional Geography in the United States Since the War: A Review of Trends in Theory and Method*. Translated from the German by John Leighly. New York, Amer. Geog. Soc., 1938. 37 mimeo. pp. [163]

Translation of a paper originally published in *Zeitschrift der Gesellschaft für Erdkunde zu Berlin* [716], 1938, pp. 93–125 (reviewed by John Leighly in *Geog. Rev.* [476], 28 (1938), 679). "Pfeifer has listed a generous share of the literature bearing on his problem in bibliographic notes that can serve as a sufficient guide to recent American geography" (Leighly, *loc. cit.*). Note 1, in particular, lists a selection of works dating from 1906 to 1936 dealing in the large with the progress and methodology of geog. studies in the United States.

Obruchev, V. A., ed. *Uspekhi geologo-geograficheskikh nauk v S.S.S.R. za 25 let: The Progress of the Geological and Geographical Sciences in the U.S.S.R. for 25 Years*. (Academy of Sciences of the U.S.S.R.: Department of Geological and Geographical Sciences.) Moscow and Leningrad, 1943. 200 pp. [164]

In Russian with English title page and table of contents. Deals primarily

with geology. Chapter on geog. by A. A. Grigoriev, pp. 179-197. See also [887].

La Science française. New ed. Paris, Larousse [1933]. 2 vols. [165]
Broad surveys of the history and status of the several sciences in France, each followed by a bibl., incl. Emmanuel de Martonne, "La Science géographique," in Vol. 1, pp. 373-396. Other chapters of geog. interest deal with geology, ethnology, anthropology, "l'Américanisme et la France," prehistory, oriental studies, and history.

Tulippe, O. *La Géographie dans les universités allemandes*. Liège, J. Wyckmans, 1930. 70 pp. (*Cercle des Géographes Liègeois Fasc. 5 des Travaux, et Travaux du Séminaire de Géographie de l'Université de Liège, Fasc. XXV.*) [166]

Sections on (1) geog. science in Germany; (2) education for secondary teaching of geog.; (3) geog. institutes (with data on libraries connected therewith), geog. societies, museums. A few bibl. refs. in the footnotes.

HISTORY OF TRAVEL AND EXPLORATION

Bibliographies covering voyages and travels in general: Lewin [337], Vol. 2 (1931), pp. 573-587 (specific voyages); pp. 588-591 (history); pp. 592-652 (collections). [167]

Cox, E. G. *A Reference Guide to the Literature of Travel, Including Voyages, Geographical Descriptions, Adventures, Shipwrecks, and Expeditions*. Seattle, Univ. of Washington. Vol. 1, *The Old World*, 1935, 410 pp. Vol. 2, *The New World*, 1938, 598 pp. (*Univ. of Washington Publs. in Language and Literature*, Vols. 9 and 10.) [168]
Covers for period through 1800 books printed in Great Britain, together with "translations from foreign tongues and Continental renderings of English works." By areas and by topics, incl. bibls., collections, circumnavigations, directions for travelers, geog. (prior to 19th century), navigation, maps and atlases, fictitious voyages, etc.; ann.; index of personal names. Review by G. B. Parks in *Geog. Rev.* [476], 29 (1939), 349.

Wright, J. K. "Some Broader Aspects of the History of Exploration," *Geog. Rev.* [476], 25 (1935), 317-320 (review art. on about 15 recent books). [169]

FACSIMILE ATLASES

Nordenskiöld, A. E. (a) *Facsimile-Atlas to the Early History of Cartography with Reproductions of the Most Important Maps Printed in the XV and XVI Centuries*. Translated from the Swedish original by J. A. Ekelöf and C. R. Markham. Stockholm, 1889. 51 uncolored pl.; 84 uncolored maps in text; 147 pp. text, index, etc. 38 x 52 cm. (b) *Periplus: An Essay on the Early History of Charts and Sailing-Directions*. Translated from the Swedish original by F. A. Bathev. Stockholm, Norstedt, 1897. 60 uncolored pl.; 100 uncolored maps in text; 217 pp. text, index, etc. 38 x 52 cm. [178]

The 2 works form a monumental contribution to the history of cartography and geog. (a) deals with printed maps of the period 1475-1592, (b) with both manuscript and printed coast charts from ancient Greek times to the close of the 18th century, with special emphasis on the 14th, 15th, and 16th centuries.

Wieder, F. C., ed. *Monumenta cartographica: Reproductions of Unique and Rare Maps, Plans and Views in the Actual Size of the Originals; Accompanied by Cartographical Monographs*. The Hague, Nijhoff, 1925-1933. 5 vols. 57 x 77 cm. [179]

Humphreys, A. L. *Old Decorative Maps and Charts*. With illustrations from engravings in the MacPherson Collection, and a catalogue of the atlases, etc., in the Collection, by Henry Stevens. London, Halton & Truscott Smith; New York, Minton, Balch Co., 1926. 79 pls. 94 pp. text. 26 x 32 cm. [180]

Designed primarily as a guide for the collector of decorative maps. Reviewed in *Geog. Rev.* [476], 18 (1928), 339-340.

Kamal, Prince Youssef. *Monumenta cartographica Africae et Aegypti*. Cairo, Privately printed, 1926-[1938]. In course of publ. (4 tomes in 13 fascicules have appeared to date). 59 x 76 cm. [181]

This enormous work, sponsored by Prince Youssef Kamal and edited by Professor F. C. Wieder, contains magnificent reproductions of maps dealing with the historical geog. of Egypt and Africa from early Greek times to the Age of Discovery, together with the texts of works bearing on the subject. Ed. limited to 100 copies. Reviewed in *Geog. Rev.* [476], 24 (1934), 175-176.

Miller, Konrad. *Mappaemundi: Die ältesten Weltkarten*. Stuttgart, Roth, 1895-1898. 6 vols. 23 x 29 cm. [182]

Reproductions of medieval world maps with transcriptions and explanatory text.

Miller, Konrad. *Mappae arabicae: Arabische Welt- und Länderkarten des 9.-13. Jahrhunderts in arabischer Urschrift, lateinischer Transkription und Übertragung in neuzeitliche Kartenskizzen, mit einleitenden Texten*. Stuttgart, Published by the editor, 1926-1931. 6 vols. in 3 folios. 25 x 33 cm. [183]

Hulbert, A. B., ed. *The Crown Collection of Photographs of American Maps*. Cleveland, Ohio, Privately printed by Arthur H. Clark Co., 1904-1928. 5 vols., with index. 43 x 47 cm. [184]
Photographs of hitherto unpublished maps in the British Museum and other foreign archives especially chosen and prepared to illustrate the early history of the United States and Canada. Edition limited to 25 sets.

Fite, E. D., and Archibald Freeman. *A Book of Old Maps Delineating American History from the Earliest Days Down to the Close of the Revolutionary War*. Cambridge, Harvard Univ. Press, 1926. 75 pp. half-tone reproductions of maps, 293 pp. explanatory text; 20 pp. contents, index, etc. 29 x 42 cm. [185]
Selection of old maps reproduced to illustrate different phases of American history. Reviewed in *Geog. Rev.* [476], 18 (1928), 339.

Wroth, L. C. "The Early Cartography of the Pacific," *Papers Bibl. Soc. of Amer.*, 38, No. 2 (1944), 85-268. [186]
Contains a bibl. list of 22 maps reproduced in text and 82 other important maps. Reviewed in *Geog. Rev.* [476], 35 (1945), 505-506.

GEOGRAPHICAL EDUCATION AND METHODOLOGY

(See also [6, No. 28], [160-166].)

Education: Mudge-Winchell [1], bibliographies, encyclopedias, etc., a 162-166, b 26, c 31-33, d 30-31; periodical indexes, a 13, b 10, c 10, d 8.—Bibliographical references to works on and aids to geographical education: Wagner [60], 1938, pp. 24-27.—For periodicals devoted primarily to geographical education see [478, 629, 672, 682, 702, 721, 846, 896]; for bibliographies for teachers of geography, see [22-29]. [187]

Whipple, G. M., ed. *The Teaching of Geography*. Bloomington, Ill.,

Public School Publishing Co., 1933. (*The Thirty Second Yearbook of the National Society for the Study of Education.*) [188]

Coöperative work by many authors. Contains following bibl. chapters: A. P. Brigham and R. E. Dodge, "Nineteenth Century Textbooks of Geography," pp. 3-27; F. K. Branom, "A Bibliography of Geography Books for Teachers and Pupils," pp. 407-413; Elizabeth T. Platt, "Published Materials for the Teachers College Library," pp. 415-427; Norah E. Zink, "Eighty-Two Studies in the Teaching of Geography Classified by Content and Technique, with Selected Summaries," pp. 431-473.

Clark, Rose B. "Geography in the Schools of Europe," Bowman [261], 1934, pp. 229-366. [189]
Bibl. on pp. 345-355.

PHYSICAL AND MATHEMATICAL GEOGRAPHY

General Aids to Study of Natural Science and Mathematics

Science in general: Mudge-Winchell [1], bibliographies, a 169-170, c 35, d 32; dictionaries, a 168-169, c 34, d 32; engineering, bibliographies, b 31-32, c 40-41; engineering, periodical indexes, a 16-17; particular sciences, a 170-192, b 27-29, c 35-38, d 33-36; periodical indexes, a 15-16; tables, a 170, b 27, c 34, d 32-33. [190]

For a record of the most recent progress of investigation in the exact and natural sciences and for reviews and abstracts of the more striking and original books and other publications the well-known weeklies, *Science* (American) and *Nature* (British), are indispensable. These contain news of exploring expeditions and important geographical researches that are in progress or planned for the immediate future. Continental counterparts of these two periodicals are *Die Naturwissenschaften* and *Revue générale des sciences pures et appliquées*. [191]

Catalogue of Scientific Papers, 1800-1900. (Royal Society of London.) London, Clay, 1867-1902; Cambridge Univ. Press, 1914-1925. 19 vols. in 4 ser. *Subject Index*, Cambridge Univ. Press, 1908-1914. 3 vols. in 4. [192]

A vast alph. auth. index to the scientific publs. of the 19th century. Of the subj. index only the vols. for pure mathematics, mechanics, and physics have been issued.

International Catalogue of Scientific Literature. Published for the International Council by the Royal Society of London. London, Harrison, 1901-1919. Annual. [193]

An outgrowth of the *Catalogue of Scientific Papers* [192]. Each annual issue consists of 17 lettered vols. on the various sciences, incl. (F) Meteorology, (H) Geology, (J) Geography (Mathematical and Physical), (L) General Biology, (P) Physical Anthropology. (J), covering 1901-1916, lists both books and period. arts. alph. by auths., with system. subj. catalogue and alph. subj. indexes.

Mathematical Geography, Geodesy, Photogrammetry

(See also [92-131], cartography and atlases.)

Bibliographical data on mathematical geography: Wagner [60], 1938, pp. 66-68, and footnotes on pp. 68-267.—For a periodical devoted primarily to mathematical geography, surveying, cartography, and photogrammetry see [844].—Navigation, tables and other reference works: Mudge-Winchell [1], a 173-174. [194]

Perrier, Georges, and others. *Bibliographie géodésique internationale.* (Association de Géodésie de l'Union Géodésique et Géophysique Internationale.) Paris, Secrétariat de l'Association. Vol. 1, *Années 1928 . . . 1930, 1935*, 219 pp. Vol. 2, *Années 1931 . . . 1934, 1938*, 420 pp. [195]

Main bibl. cl. by topics; 1,433 and 5,554 entries; ann.; auth. indexes; list of periodicals by countries.

American Society of Photogrammetry. *Bibliography of Photogrammetry*, constituting *Photogrammetric Engineering*, Vol. 2, No. 4, Oct.-Dec., 1936. 117 pp. [196]

Covers books, period. arts., and govt. publs.; alph. by auths., topical index.

Gore, J. H. "A Bibliography of Geodesy," *U.S. Coast and Geodetic Survey: Report for 1887*, Appendix No. 16, Washington, 1889, pp. 313-512. A second edition was published as Appendix No. 8 of the *Report for 1902*, Washington, 1903, pp. 427-787. [197]

Alph. by auths. and topics.

Physical Geography and Related Sciences

(See also [6, Nos. 6-7].)

Atlas

Berghaus' physikalischer Atlas. 3d ed. Ed. by Hermann Berghaus. Gotha, Justus Perthes, 1887-1892. 75 pl.; 82 pp. text, contents, index. 27 x 39 cm. [198]
Geology, hydrography and oceanography, meteorology, terrestrial magnetism, flora, fauna, ethnography.

GEOLOGY AND GEOCHRONOLOGY

(See also [6, No. 8]; [176], maps; [321], military geology.)

According to the survey recently made by the American Library Association (see above, p. 23, note 20), the following American libraries contain important collections of geological publications:

Universities: Alabama, California, Chicago (paleontology), Columbia (physiography), Cornell, Harvard, Johns Hopkins, Joint University Libraries (Nashville, Tenn.), Massachusetts Institute of Technology, Michigan, Minnesota, North Carolina, Ohio State, Oklahoma, Princeton (vertebrate paleontology), Stanford, Washington at Seattle, Yale. *Public Library*: New York; *Others*: American Museum of Natural History (vertebrate paleontology), Engineering Societies Library, Library of Congress, Philadelphia Academy of Natural Sciences, Smithsonian Institution, United States Geological Survey. [199]

BIBLIOGRAPHIES OF BIBLIOGRAPHIES

Mathews, E. B. *Catalogue of Published Bibliographies in Geology, 1896-1920*. Washington, 1923. 228 pp. (*Bull. of the National Research Council*, No. 36 (Vol. 6, Pt. 5).) [200]
Continuation of [201]. 3 main parts: (1) genl. bibls.; indexes of series, etc.; (2) subj. bibls. (alph. by topics and areas); (3) personal bibls. and necrologies. 3,312 entries; auth. index.

Margerie, Emmanuel de. *Catalogue des bibliographies géologiques, rédigé avec le concours des membres de la Commission Biblio-*

graphique du Congrès. (Congrès Géologique International.) Paris, Gauthier-Villars, 1896. 753 pp. [201]

A fundamental work. Topical and areal cl.; 3,918 entries; ann.; indexes by auths., topics, and geog. names. For continuation see [200].

CURRENT BIBLIOGRAPHIES

Annotated Bibliography of Economic Geology. Urbana, Ill., Economic Geology Publishing Co. 1928-. Semiannual. Prepared under the auspices of the Society of Economic Geologists. Genl. index to first 10 vols., 1928-1938. [202]

Bibliography and Index of Geology Exclusive of North America. [New York], Geological Soc. of Amer. 1933-. Annual (1 vol. for 1941-1942). [203]

Compiled by J. M. Nickles and others. Complement to United States Geological Survey's bibls. of geology of North America [427]. Supersedes [204]. In each vol. main bibl. alph. by auths. with detailed topical and place index; also list of periodicals.

List of Geological Literature Added to the Geological Society's Library During the Year . . . London, Geological Society. 1895-1936. Annual. [204]

Comprehensive lists, alph. by auths., with subj. index. Superseded by [203].

OTHER REFERENCE WORKS

Mudge-Winchell [1], a 181-184, b 29, c 36-37, d 34. [205]

Internationaler Geologen- und Mineralogen-Kalender. Stuttgart, Ferdinand Enke. ?-[1937] Irregularly. Ed. by Deutsche Geologische Gesellschaft, Berlin. Formerly *Geologen-Kalender*. [206]

Lists geologists and also geological institutions, university departments, etc., with data on their publs.

Fleming, R. C. *Source Book: A Directory of Public Agencies in the United States Engaged in the Publication of Literature on Mining and Geology.* New York, S.W. Mudd Memorial Fund, Amer. Inst. of Mining and Metallurgical Engineers, 1933. 128 pp. [207]

GEOCHRONOLOGY

A series of annotated bibliographies by J. P. Marble of articles relating to the measurement of geologic time have been published since

1936 in the mimeographed reports of the Committee on the Measurement of Geologic Time of the National Research Council, Washington, D.C. [208]

Schulman, Edmund. "A Bibliography of Tree-Ring Analysis," *Tree-Ring Bull.*, 6 (1940), 27-39. [209]
412 entries.

de Chile, Imprenta Universitaria, 1915-1919. 7 pts. 1,515 pp. (Also published in *Revista Chilena de Historia y Geografía* [575], 1915-1919.) [223]

TERRESTRIAL MAGNETISM

Fleming, J. A., ed. *Terrestrial Magnetism and Electricity*. New York and London, McGraw-Hill, 1939. (*Physics of the Earth*, Vol. VIII.) [224]

"Bibliographical Notes and Selected References" by H. D. Harradon on pp. 679-778; topical cl.; 1,523 entries.

Bartels, J. "Bericht über die Fortschritte unserer Kenntnisse vom Magnetismus der Erde (IX, 1925-29)," *Geog. Jhrb.* [6], 44, (1929), 3-36. [225]

2 parts: (1) genl., subcl. topically; (2) observatories, surveys, field studies, subcl. areally; 417 entries; ann.; auth. index.

SNOW AND ICE

A list of current publications on snow and ice has appeared since 1935 in Part 2 of the *Trans. of the American Geophysical Union* published annually by the National Research Council, Washington.—See also [1172]. [226]

Bibliography on Ice of the Northern Hemisphere. (United States Navy Department: Hydrographic Office.) Washington, 1945. 191 pp. (*H.O. Pub.*, No. 240) [227]

The bibl. for [227a]. Compiled by Mary C. Grier. Cl. by bodies of water (e.g. Arctic Ocean, Greenland Sea) with sections on rivers and lakes of North America and of Eurasia; 1,700 entries; indexes by subjects, names (auths., ships, expeditions, etc.), geog. names.

Maps and Atlas

Ice Atlas of the Northern Hemisphere. (United States Navy Department: Hydrographic Office.) Washington, 1946. 106 pp. 62 x 62 cm. (*H. O. Pub.* No. 550.) [227a]

Compiled under the direction of J. C. Weaver. Covers sea and river ice for Northern Hemisphere as a whole and sea ice for Grand Banks region, Baltic, Black, and White seas, and Okhotsk Sea regions. Bibl. on pp. 93-106; 1,700 entries; no index (see, however, [227]).

- Antevs, Ernst. "Maps of the Pleistocene Glaciations," *Bull. Geological Soc. of Amer.*, 40 (1929), 631-720. [228]
Bibl. on pp. 696-720.

SOILS

(See also [299], atlas.)

- Review of four publications on tropical soils by R. L. Pendleton:
Geog. Rev. [476], 29 (1939), 493-496. [229]
- Giesecke, F. "Die bodenkundliche Forschung, 1927/28-1937: Ein Überblick," *Geog. Jhrb.* [6], 54, Pt. 1 (1939), 181-302. [230]
Areal cl. with introductory section cl. by topics; 2,111 entries; ann.; auth. index.

WATERS OF THE LAND

(See also [6, No. 10], [235].)

- Friedrich, Wilhelm. "Gewässerkunde (1930-37)," *Geog. Jhrb.* [6], 54, Pt. 1 (1939), 85-180. [231]
Topical cl. with areal subcl. for certain topics; 1,125 entries; ann.; auth. index.
- Chumley, James. "Bibliography of Limnological Literature," in Sir John Murray and Laurence Pullar, *Bathymetrical Survey of the Scottish Fresh-Water Lochs*, Edinburgh, 1910, Vol. 1, pp. 659-753. [232]
Alph. by auths.; no anns. or index.

OCEANOGRAPHY

(See also [6, No. 11], [259], animal geography.)

- Lewis, C. L. *Books of the Sea: An Introduction to Nautical Literature*. Annapolis, U.S. Naval Inst., 1943. 318 pp. [233]
Each chapter is a running discussion of some phase of nautical literature (incl. fiction, poetry, plays, books of travel, naval histories, works on oceanography, etc.) followed by "reading lists." Refs. are preponderantly to works in English.
- A bibliography on tides and kindred matters, covering the period 1910-1937 with certain publications before 1910, has been pub-

lished in five installments, (1) and (2) comprising *Union Géodésique et Géophysique Internationale: Section d'Océanographie, Bulletin*, Nos. 12 and 17; (3), (4), and (5) comprising *Publications scientifique de l'Association d'Océanographie Physique*, Nos. 2, 3, and 6. [234]

Bibliographia oceanographica: Johannes Magrini, Fundator. Rome (formerly Venice), Consiglio Nazionale Ricerche. 1930-[1939]. Annual vols. issued in parts. [235]

Extensive ann. bibl. covering oceanography, lakes, rivers, fisheries, and navigation. Preceded by Giovanni Magrini, *Essai d'une bibliographie générale des sciences de la mer . . . année 1928*, Venice, Ferrari, 1929.

Schulz, Bruno. "Bericht über die Fortschritte der Ozeanographie (1933-37)," *Geog. Jhrb.* [6], 54, Pt. 1 (1939), 3-84. [236]

Deals primarily with physical oceanography. 2 parts, (1) topical cl., (2) by areas subcl. by topics; 1,154 entries; ann., auth. index.

Index to Publications by the International Council for the Exploration of the Sea, 1899-1938. (Conseil Permanent International pour l'Exploration de la Mer.) Copenhagen, Høst, 1939. 145 looseleaf pp. [237]

In 8 parts: (1) alph by auths., etc.; (2) administration and economics; (3) hydrography; (4) meteorology; (5) the sea bottom; (6) plankton; (7) biology; (8) fisheries.

Marmer, H. A. "Recent Major Oceanographic Expeditions: A Review of the Work of the Meteor, Carnegie, Dana, and Snellius Expeditions," *Geog. Rev.* [476], 23 (1933), 299-305. [238]

[Seas: Caspian, Black, Baltic, Arctic, Siberian, and Pacific Ocean: History of Exploration: Morphometry, Hydrology, Biology]. Moscow and Leningrad, 1931. 248 pp. [238a]
Comprehensive bibls. at ends of chapters.

Bencker, H. "The Bathymetric Soundings of the Oceans," *Hydrographic Review*, 7 (1930), 64-97. [239]

Contains a chronological list (without bibl. refs., however) of ocean explorations 1800-1930 (pp. 72-86).

METEOROLOGY AND CLIMATOLOGY

(See also [6, No. 12].)

Meteorology, bibliographies, and other reference works: Mudge-Winchell [1], a 184-185, c 37, d 34.—Note on bibliographies of general meteorology in U.S. Dept. of Commerce, Weather Bureau, *Library Circular*, July, 1943, pp. 1-5. [240]

Bibliography of Meteorological Literature Prepared by the Royal Meteorological Society with the Collaboration of the Meteorological Office. London, Royal Meteorological Soc., 1920-. Semi-annual. [241]

Succeeds bibls. in *Quarterly Jour. of the Royal Meteor. Soc.*, 1917-1920.

Muller, Hans. "On International Bibliographies of Meteorology," *Bull. Amer. Meteorological Soc.* 23 (1942), 407-410. [242]
A survey of "serially issued bibliographies of international scope."

Köppen, W., and R. Geiger, eds. *Handbuch der Klimatologie*. Berlin, Bornträger. 1930-[1939]. 5 vols. [in 14 parts]. [243]
Bibls. and bibl. footnotes are included in most of the parts of this fundamental series, which covers to date general climatology (Vol. 1), the Americas (Vol. 2), Europe and U.S.S.R. in Asia (Vol. 3), Farther India, Insulinidia, Southern Australia, New Zealand, South Sea Islands, and Antarctica (Vol. 4), and Rhodesia, Nyasaland, and Mozambique Colony (Vol. 5). The parts on the West Indies, North America, Australia, New Zealand, and Rhodesia, etc., are in English, the others in German. See reviews in *Geog. Rev.* [476], 21 (1931), 527; 22 (1932), 161, 511; 27 (1937), 702; 28 (1938), 695.

United States Works Progress Administration. *Bibliography of Aeronautics: Part 2, Meteorology*. Compiled from the *Index of Aeronautics* of the Institute of the Aeronautical Sciences. New York, 1937. 641 mimeo. pp. [244]
Topical cl., auth. index.

Ward, R. DeC. "The Literature of Climatology," *Annals Assn. of Amer. Geogs.* [479], 21 (1931), 34-51. [245]
Not strictly a bibl. but a "stock taking" of "the main lines along which climatological investigation and writing has progressed . . . in order that those who are primarily concerned with climatological literature may have this matter brought somewhat more clearly to their attention."

- Knoch, K. "Bericht über die Arbeiten aus dem Gebiete der geographischen Meteorologie, 1926-28," *Geog. Jhrb.* [6], 44 (1929), 37-144. [246]
 3 main parts: (1) genl., (2) genl. climatology, (3) descriptions of climates. (1) and (2) cl. by topics, (3) by regions; 1,296 entries; ann., auth. index.

Atlases

- Atlas of Climatic Charts of the Oceans.* Prepared under the supervision of W. F. McDonald. Washington, 1938. 130 charts (2 to a pl.); 6 pp. text, etc. 48 x 46 cm. (U.S. Weather Bur. [Publ.] No. 1247.) [247]
 Charts (Mercator's projection), based on observations taken by ships at sea during more than fifty years, covering winds (48 charts), fog, mist, haze, exceptional visibility (16), clouds (28), precipitation (16), mean depression of the wet-bulb thermometer (4), temperature of air and sea surface (16). Reviewed by John Leighly in *Geog. Rev.* [476], 30 (1940), 175-176.
- Bartholomew, J. G., and A. J. Herbertson. *Atlas of Meteorology.* Ed. by Alex. Buchan. (Royal Geog. Soc.) London, Constable, 1899. 34 pl. with more than 400 maps; 57 pp. text, appendices, index, etc. 31 x 47 cm. (*Bartholomew's Physical Atlas*, Vol. 3.) [248]
 2 parts: (1) climate maps (temperature, pressure, winds, clouds, precipitation), (2) weather maps (storms, anomalous and typical weather).

GEOGRAPHY OF PLANTS AND ANIMALS (BIOGEOGRAPHY)

- Biology: bibliographies and other reference works: Mudge-Winchell [1], a 186-187. [249]

Plant Geography (Phytogeography)

Atlases

Krische, Paul. (a) *Bodenkarten und andere kartographische Darstellungen der Factoren der landwirtschaftlichen Produktion verschiedener Länder: Ein Beitrag zur neuzeitlichen Wirtschaftsgeographie*. Berlin, Parey, 1928. 111 pp. 77 maps. (b) *Landwirtschaftliche Karten als Unterlagen wirtschaftlicher, wirtschaftsgeographischer und kulturgeschichtlicher Untersuchungen*. Berlin, Deutsche Verlagsgesellschaft, 1933. 112 pp. 209 maps. (c) *Mensch und Scholle: Kartenwerk zur Geschichte und Geographie des Kulturbodens*. Berlin, Deutsche Verlagsgesellschaft, 1936. 151 pp. 289 maps. [299]
 With a few exceptions the maps are either adaptations or direct reproductions of maps that have appeared in many different publs. In (a) the emphasis is mainly on soil maps; in (b) and (c), while there are also soil maps, a much wider range of economic-geog. subjs. is covered. Despite their heterogeneous character these volumes may serve as a useful reference atlas in agricultural geog. Reviewed ((a) and (b) by C. F. Marbut) in *Geog. Rev.* [476], (a), 19 (1929), 345-346; (b), 24 (1934), 174-175; (c), 28 (1938), 174-175.

Atlas of American Agriculture: Physical Basis, Including Land Relief, Climate, Soils, and Natural Vegetation of the United States. Prepared under the supervision of O. E. Baker. (U.S. Department of Agriculture.) Washington, Govt. Print. Off., 1936. 228 pp. 35 x 48 cm. [491]

The original plan for this Atlas included not only the sections printed in this volume but also other sections relating to a wide variety of other topics. Of these latter only 2 were published: "Cotton," as advanced sheets in 1918, and "Rural Population" in 1919. In the present volume (which lacks a table of contents), the following sections, each paged separately, will be found in the order listed: "Land Relief," by F. J. Marschner, 1936, 6 pp.; "Climate: Temperature, Sunshine, and Wind," by J. B. Kincer, 1928, 34 pp.; "Climate: Frost and the Growing Season," by W. G. Reed, 1918, 13 pp.; "Climate: Precipitation and Humidity," by J. B. Kincer, 1922, 48 pp.; "Soils," by C. F. Marbut, 1935, 98 pp.; "Natural Vegetation" ("Grassland and Desert Shrub," by H. L. Shantz; "Forests," by Raphael Zon), 1924, 29 pp. Each part contains one or more double-page map plates of the United States, 1:8,000,000, in color, and there are many maps and diagrams in the text. The section on soils contains Marbut's magnificent "Soil Map of the United States," 1:2,500,000, in 12 full-page plates.

Statistical Atlas of the United States. Prepared under the supervision of C. S. Sloane. . . . (Department of Commerce, Bureau of the Census.) Washington, Govt. Print. Off., 1925. 476 pp.: 434 pp. uncolored plates, 3 inserted plates in color; 42 pp. text (introduction, contents, index, etc.). 23 x 30 cm. [492]

Population densities and trends (pl. 1-238), agriculture, manufactures, mines and quarries, financial statistics of cities and states, vital statistics, etc. (maps and graphs).

Earlier statistical atlases of the United States were published by the Census Bureau in 1874, 1898, 1903, and 1914.

Periodicals

Russian geographical periodicals and periodicals dealing with related subjects are listed in Anger [886], Schulz [885], and Leimbach [915]. For European U.S.S.R. Schulz, 1936, lists 311 titles under the following headings: general, 15; mathematical geography and cartography, 3; geology, mineralogy, soils, 38; geophysics, meteorology, climatology, 34; oceanography, hydrography, 16; plant geography, 14; animal geography, 9; anthropology, ethnology, 17; economics, statistics, 21; various other subjects, 24; regional, 136.

According to Schulz the only current (1936) general geographical periodicals of really scientific caliber are *Zemlevedenie* [897] and *Izvestiia V. G. O.* [895].

The principal repository of geographical information on Russia in the collections of the American Geographical Society consists of the periodicals of the former Imperial Russian Geographical Society and its continuation (see [894, 895, 900, 901]; for changes in name see note on [895]), of many special publications of that Society, and of the periodicals of its various regional sections and subsections.

Between 1850 and 1917 about a dozen regional sections and subsections of the Imperial Russian Geographical Society were established in various parts of the Empire. All of these published one or more periodicals, some of which were continued to as late as 1930. The following partial list, which covers the outstanding series only, is based upon the check list of holdings in the library of the American Geographical Society, supplemented by data gleaned from Leimbach [915] and from the Union List of Serials (see also, for additional data, Kerner [963], Vol. 2, pp. 293-294). The list is arranged by institutions in the chronological order of the first number of the first periodical issued by each. Abbreviations: *Īz.*: *Izvestiia* [Bulletin]; *Zap.*: *Zapiskī* [Memoirs]; (A): represented in the library of the American Geographical Society. See also the first edition of *Aids to Geographical Research* for titles of a selection of these periodicals as transliterated in full.

By topics, with a section on regions; 247 entries; ann.; auth. index.

Underwood, H. H. "A Partial Bibliography of Occidental Literature on Korea from Early Times to 1930," *Trans. of the Korea Branch of the Royal Asiatic Society*, 20 (1931), 17-185, i-xvi. [1000]
By topics, incl. bibls., periods., culture, science, hist., travel and description, etc., 2,882 entries; auth. index; selected list (pp. 184-185) of 50 titles. See also supplement by E. and G. Gompertz in *Trans. Korea Branch, R. Asiatic Soc.*, 24 (1935), 21-48 (369 entries).

JAPAN

(See also [91], guidebook.)

Mudge-Winchell [1]: encyclopedia, a 49; geographical names, d 61; statistical yearbooks, a 126, b 22. [1001]

- Hellman, Florence S. *The Japanese Empire: Industries and Transportation; A Selected List of References*. (The Library of Congress, Division of Bibliography.) Washington, 1943. 56 mimeo. pp. [1002]
2 main sections: (1) books and pamphlets (subcl. under 2 hdgs: (a) directories, handbooks, and periods., (b) genl.); (2) arts. in periods., cl. by period. titles (alph.); 598 entries; subj. index.
- Borton, Hugh, Serge Elisséeff, and E. O. Reischauer. *A Selected List of Books and Articles on Japan in English, French, and German*. (American Council of Learned Societies, Committee on Japanese Studies.) Washington, 1940. 151 pp. [1003]
By topics, incl. bibls., ref. works, periods., geog., hist., economics, government and politics, sociology, religion, language, literature, art, etc.; 842 entries; auth. and title index.
- Schwind, Martin. "Gross-Japan (1927-38)," *Geog. Jhrb.* [6], 54 (1939), Pt. 2 (1940), 373-449. [1004]
Sections on the Japanese Empire as a whole (topical cl.) and on regions; 962 entries; ann.; auth. index.
- Nachod, Oskar, and others. *Bibliographie von Japan [1906-1935]*. Leipzig, Hiersemann, 1928-1937. 5 vols. Essentially a continuation of von Wenckstern [1007], Vol. 2, 1907. Vols. 1 and 2 covering 1906-1926 were published in 1928 (also published with English title, *A Bibliography of the Japanese Empire*, London, Goldston, 1928); Vol. 3, 1927-1929, was published in 1931; Vol. 4, 1930-1932 (ed. and enlarged by Hans Praesent), in 1935; Vol. 5, 1933-1935 (compiled by Hans Praesent and Wolf Haenisch), in 1937. [1005]
Covers works in western languages (incl. Russian). By topics, incl. bibls., periods., hist., travel, culture, natural sciences, etc.; 25,376 entries; auth. indexes.
- Cordier, Henri. *Bibliotheca Japonica: Dictionnaire bibliographique des ouvrages relatifs à l'Empire Japonais rangés par ordre chronologique jusqu'à 1870, suivi d'un appendice renfermant la liste alphabétique des principaux ouvrages parus de 1870 à 1912*. Paris, Imprimerie Nationale: Leroux, 1912. xii pp. and 762 cols. [1006]
Not on a scale comparable to Cordier's *Bibliotheca Sinica* [984]. "I have merely taken up in this volume the work of Pagès [see von Wenckstern [1007]] published in 1859, and I have carried it on, with corrections and additions, to the Revolution of 1868, or rather to 1870" (Preface, p. vi). The appendix is relatively brief (cols. 617-712). Refs.

are given to period. arts. and to reviews of many of the items. Auth. index. The chron. arrangement and lack of subj. index restrict the utility of this work for purposes of geog. research.

Wenckstern, F. von. *A Bibliography of the Japanese Empire, Being a Classified List of All Books, Essays and Maps in European Languages Relating to Dai Nihon (Great Japan) Published in Europe, America, and in the East*. Vol. 1, Leiden, Brill, 1895, 352 pp.; Vol. 2 (title slightly different), Tokyo, Osaka, and Kyoto, The Maruzen Kabushiki Kaisha, 1907, 502 pp. [1007]

Vol. 1 covers the period 1859-1893; Vol. 2 the period 1894 to the middle of 1906. Appended to Vol. 1 is a facsimile reproduction of Léon Pagès, *Bibliographie japonaise, ou catalogue des ouvrages relatifs au Japon qui ont été publiés depuis le xv^e siècle jusqu'à nos jours*, Paris, 1859, 68 pp. Appended to Vol. 2 is a supplement to Pagès, *Bibliographie japonaise* (additions and corrections), 28 pp., and a *Systematic List of the Literature in Swedish Language on the Empire of Japan* compiled by Miss Valfrid Palmgren, 21 pp.

Wenckstern's work has been severely criticized (see Cordier, *Bibliotheca Japonica* [1006], p. v) and should be used with care. It does not cover Russian publs. By topics, incl. bibls., periods., travel, ethnography, natural hist., topography and hydrography, physiography, hist., art, literature, etc.; auth. indexes; index to periodicals.

APPENDIX

CLASSIFIED INDEX OF
AMERICAN PROFESSIONAL GEOGRAPHERS,
LIBRARIES OF GEOGRAPHICAL UTILITY,
AND INSTITUTIONS ENGAGED IN
GEOGRAPHICAL RESEARCH

EXPLANATORY NOTE

DURING the spring and summer of 1945 a questionnaire was sent to the 425 members of the two nation-wide organizations of professional geographers, the Association of American Geographers and the American Society for Professional Geographers. To this questionnaire, 210 replies have been received. Each recipient was asked (1) to indicate the main branches of geography, or the areas, or both, with which his research work has dealt, and (2), for each subject so indicated, also to give the names of (a) libraries deemed to be particularly well equipped for purposes of geographical research, (b) institutions known to be actively engaged in such research, and (c) living persons qualified to give helpful counsel to others who might wish to conduct such research.

Each library and each institution mentioned by five or more respondents to the questionnaires in answer to questions (2a) and (2b) is listed below. The figures in parentheses show the number of respondents who mentioned each. While one may well hesitate to draw general conclusions from statistics of this kind, the first list would seem to give a clue to the relative amount of use made of the different libraries by a representative group of American geographers (compare the list on p. 65 above) and the second at least to suggest the relative degree of productivity in *geographical* research that the same group would ascribe to the different institutions as of 1945.

Libraries.—Library of Congress (85), American Geographical Society (53), Harvard Univ. (34), U.S. Dept. of Agriculture (agricultural geog., soils, climatology, land utilization, U.S.A.) (31), Univ. of Chicago (21), Univ. of California (26), Clark Univ. (23), Univ. of Michigan (23), New York Public Library (19), U.S. Geological Survey (geomorphology, U.S.A.) (17), Columbia Univ. (15), U.S. Weather Bureau (climatology) (15), Yale Univ. (14), Univ. of Wisconsin (13), Blue Hill Observatory (climatology) (10), John Crerar Library (9), U.S. Dept. of Commerce (economic geog.) (8), U.S. Dept. of State (8), Pan American Union (Latin America) (6), Univ. of Texas (6), Ohio State Univ. (6), Univ. of Illinois (5), Univ. of North Carolina (U.S.A.—the South) (5), Huntington Library (5).

Research Institutions.—U.S. Dept. of Agriculture (agricultural geog., soils, climatology, land utilization and planning, U.S.A.) (31), Univ. of California (24), Harvard Univ. (24), American Geographical Society (21), Univ. of Chicago (20), Clark Univ. (10), Univ. of Michigan (10), U.S. Geological Survey (geomorphology) (10), Univ. of Wisconsin (9), U.S. Weather Bureau (climatology) (8), Inst. of Pacific Relations (Pacific, Far East) (7), Smithsonian Instn. (6), Columbia Univ. (6), U.S. Office of Strategic Services * (cartography) (6), Blue Hill Observatory (climatology) (5).

The following index presents in detail a part of the information gathered through the questionnaire. Inquiries of this kind always yield data of uneven value. In this case, the information concerning institutions and individuals outside of the United States, Hawaii, and Alaska, while adequate for certain subjects, as a whole was extremely scattered and for this reason has been omitted (except as regards a few Canadian and Latin American members of the Association of American Geographers).

The *professional geographers* listed are, with a few exceptions, members of either the Association of American Geographers, the American Society for Professional Geographers, or both. These two organizations comprise the majority of the professional geographers of the country. Although many nongeographers were named in the answers, it was decided to omit them because of the difficulty of establishing any consistent principle as to whom to include. Obviously, however, certain nongeographers are as well versed as geographers in some of the subjects (for example, cartography, land utilization) under which the names of the latter appear.

The names assigned to any subject are those of (a) all persons who, in their own answers, specified that subject as one in which they have conducted research, (b) other American geographers whose familiarity with the subject is indicated in the answers, and (c) a few others added by the compiler. In most cases where a name is followed by a specific subject in parentheses, the person named listed the subject as one of his own special fields.

The purpose of the list is to present the information gathered through the questionnaire in an objective manner. Hence, except for additions, editorial changes have been kept to a minimum. In so far as possible the data are classified according to subjects *as indicated in the answers*. Since the names of many besides the respondents to the questionnaire are included, it is believed that the list provides a fairly satisfactory bird's-eye view of the various fields that American geographers are cultivating and

* This office has been discontinued; its geographical research functions have been taken over by the Department of State.

of the relative number of professional geographers in each. A few names, however, that are fully as worthy of inclusion under certain headings as are some of those actually listed have doubtless been overlooked.

Institutions mentioned in one or more answers as actively engaged in geographical research are designated by (g). The presence or absence of a (g), however, may well be misleading with regard to many institutions, as "geographical research" was not defined in the directions for filling out the questionnaire and was variously interpreted. Furthermore, since certain government agencies have been reorganized or discontinued and many geographers have returned from government service to the universities since the inquiry was made, the information regarding research is out-of-date in certain points of detail. Universities, government agencies, societies, and the like, mentioned as possessing libraries well equipped for purposes of geographical research are designated by (l) (or (gl) if they are also mentioned as engaged in research). L. means Library; P.L., Public Library; L.C., Library of Congress; U., University; and A.G.S., American Geographical Society. Other abbreviations are self-explanatory. A few local historical societies and libraries mentioned in the answers have been omitted.

Grateful acknowledgment is made to the officers of the Association of American Geographers and of the American Society for Professional Geographers for their collaboration in sending out the questionnaire, and especially to Professor R. H. Brown for his kindness in personally addressing the envelopes for members of the A.A.G. Sincere thanks are also due to all of those who answered the questionnaire. Many of the answers were given in detail at the cost of time and thought, and some were accompanied by friendly letters providing additional information. The following replied with much fullness and care: H. H. Bennett (on soil geography), D. D. Brand (on historical geography, agricultural history, and biogeography particularly concerning the New World and Mexico), J. W. Coulter (on work of the Committee on Pacific Science Appraisal of the National Research Council), S. de R. Diettrich (on the South, U.S.A.), C. D. Harris (on urban geography, the geography of manufacturing industries, the U.S.S.R., the Inter-mountain Region of the Western U.S.A., etc.), Owen Lattimore (on China), H. H. Rasche (on bibliographies of the Joint Intelligence Study Publishing Board), K. H. Stone (on aerial photo-interpretation and Alaska), and R. G. Stone (on climatology and bioclimatology). It is regretted that considerations of space and consistency made it necessary to omit some of the helpful information that these and others so kindly submitted.

GEOGRAPHICAL TOPICS

GENERAL TOPICS

History of Geography

- Vilhjalmur Stefansson (geog. discovery, pre-Columbian relations between Europe and America). *Medieval geography*: G. H. T. Kimble, J. K. Wright. *Modern geography*: R. H. Brown, Richard Hartshorne, John Leighly. *History of cartography*: Clara E. Le Gear, F. J. Marschner, Lawrence Martin
- A.G.S. (gl), Harvard U. (1), Huntington L., John Carter Brown L., L.C., Natn. Archives (1), New York P.L., U. Chicago (gl), U. Wisconsin (gl), Wm. L. Clements L. Various historical societies

Historical Geography

- D. D. Brand (land settlement or occupancy sequence), R. H. Brown (North America), G. S. Corfield, S. D. Dodge, C. O. Sauer
- For institutions see History of Geography, above. For North American archeology: Bur. Amer. Ethnology (1), Peabody Mus. (Harvard U.) (1), Southwestern Mus. (Los Angeles) (1)

Methodology and Bibliography

(This list could be greatly expanded, since all geographers in one way or another give attention to these subjects.)

- Isaiah Bowman, V. C. Finch, Richard Hartshorne, W. L. G. Joerg, John Leighly, R. S. Platt, G. T. Renner, Jr., J. K. Rose (quantitative techniques), C. O. Sauer, Derwent Whittlesey. *Bibliography*: Nordis Fel-land, J. K. Wright

Geographical Education

- Mamie L. Anderzhon, W. W. Atwood, H. H. Barrows, N. A. Bengston, Benoît Brouillette, G. S. Corfield, R. E. Dodge, Alice Foster, Agnes Garrels (esp. elementary), G. D. Hubbard, G. J. Miller, Edith P. Parker, R. S. Platt, H. J. Warman, J. R. Whitaker

INDEX

NOTE. Numerals in roman type refer to pages; those in *italics*, to the serial numbers of items in the Bibliography.

Titles of serials, series, and sets are printed in *italics*; other titles, in roman; titles of articles in periodicals and of parts or chapters of books are indicated by quotation marks.

Separate titles are not ordinarily included in the index where they would appear close to corresponding subject captions (e. g. the periodical *Africa* is not indexed by title, since this title would occur next to the subject caption "Africa"); or titles beginning with the words "Atlas" or "Bibliography" or their equivalents in foreign languages (e. g. "Atlante," "Bibliografia," "Bibliographie," etc.). References to the pages on which such works are cited, or to their serial numbers, may be readily found by consulting the appropriate subject entries.

The names of persons and institutions as listed in the Appendix, pp. 276-294, are not indexed.
